EXECUTIVE SUMMARY

Agnico Eagle Mines Limited (Agnico Eagle) operates two mines in eastern Nunavut; the Meadowbank Complex (Meadowbank and Whale Tail Mines) approximately 85 km north of Baker Lake, and the Meliadine Mine, approximately 25 km north of Rankin Inlet. Agnico Eagle supplies these projects through annual sea-lifts during the open water season. The shipping company Groupe Desgagnés ships dry cargo, and the Woodward Group of Companies (Woodward) supplied fuel to Meadowbank and Meliadine.

Agnico Eagle holds three Project Certificates (PCs) from the Nunavut Impact Review Board (NIRB) for Meadowbank Mine (No. 004 and 008) and the Meliadine Mine (No. 006). These PCs include conditions related to protection of marine mammals and seabirds, including avoiding sensitive breeding and habitat areas for marine mammals and seabirds and conducting a Marine Mammal and Seabird Observer (MMSO) program by vessel crew (see Table 1 for Compliance to Project Conditions).

The objective of this report is to present a summary of the MMSO data collected by Groupe Desgagnés and Woodward during the 2022 MMSO program to support Agnico Eagle's 2022 annual report to the NIRB. Results from the previous years for Meliadine (2017 to 2021) and Meadowbank (2018 to 2021) are also provided as a comparison between years.

In 2020 through 2022, ERM provided updated training materials for vessel crew that were delivered by Agnico Eagle to shipping companies supplying Meadowbank and Meliadine. These training materials were provided to Groupe Desgagnés and Woodward and included updated instructions for vessel crew on:

- 1) setbacks from sensitive marine wildlife habitats such as marine mammal haul-outs and seabird colonies,
- 2) mitigation procedures should marine mammals or seabirds be observed in or near the vessel path, and
- 3) training materials for dedicated MMSO crew observers including detailed methods for marine mammal and seabird surveys, data sheets, and training videos.

The 2022 MMSO program resulted in greater survey effort compared to 2021. Since the improvement in training in 2020, all years (2020 through 2022) have resulted in greater survey effort compared to previous years. A total of 27 Groupe Desgagnés and Woodward vessels serviced the Projects between July and November during the 2022 shipping season: 13 for Meadowbank, seven for Meliadine, and seven serviced both Meadowbank and Meliadine. Datasheets were obtained from 21 of the 27 vessels in 2022, which is similar to the last two years (23 of the 29 vessels in 2021, and 19 of the 25 vessels in 2020), all of which are greater than previous years (six vessels providing datasheets in 2019, and only two participating vessels in 2018).

Setbacks from Sensitive Habitats

In compliance with Whale Tail Mine Certificate No. 008, Term and Condition 39, project vessels must follow a setback distance of 500 m from colonies and aggregations of seabirds and marine mammals while transiting through the Hudson Strait, Hudson Bay, and Chesterfield Inlet. In addition, vessels must follow a setback distance of 2 km from Marble Island, as per Meliadine's Shipping Management Plan (Agnico Eagle 2022b). Vessel tracks were mapped along with identified sensitive areas for wildlife; where detailed data was available, vessels were shown to avoid these areas where safe to do so. Groupe Desgagnés and/or Woodward had several occasions where tracks appeared to intersect with 500 m setback polygons, or the 2 km setback polygon around Marble Island. However, in all but one case (one point within the Marble Island polygon), no ship track point was located within a setback polygon. Track data is based on satellite AIS (Automatic Identification System); therefore, ship track intersections likely occurred due to lack of ship track resolution and the intersection of existing points to create a continuous shipping track. Agnico Eagle will continue to explore in 2023 the feasibility to obtain accurate track data..

Table 1: Project Certificates, Conditions, Compliance, and Document Section

Project Certificate and Condition #	Compliance	Section
<p>Meadowbank PC 004, Condition 36 Cumberland shall ensure the placement of local area marine mammal monitors onboard all vessels transporting fuel or materials for the Project through Chesterfield Inlet.</p>	<p>In Compliance Local area marine mammal monitors have conducted surveys aboard vessels transiting between Chesterfield Inlet and Baker Lake between 2008 and 2019 and in 2022. During 2020 and 2021, due to COVID-19, local monitors could not board vessels and vessel crew conducted the monitoring.</p>	<p>1.6 Overview 3.4 Results</p>
<p>Meadowbank PC 004, Condition 41 Subject to vessel and human safety considerations, Cumberland shall require shippers carrying cargo to the Project through Chesterfield Inlet to follow the following mitigation procedures in the event that marine mammals are in the vicinity of the shipping activities:</p> <ul style="list-style-type: none"> a. Wildlife will be given right of way; b. Ships will maintain a straight course, constant speed, and will avoid erratic behaviour; and c. When marine mammals appear to be trapped or disturbed by vessel movements, the vessel will stop until the mammals have moved away from the area. 	<p>In Compliance In 2020, Agnico Eagle updated the maps and training materials showing the setbacks and mitigation measures when marine mammals and seabirds are observed. These materials were presented to Groupe Desgagnés and Woodward for distribution to all captains and bridge crew of vessels supplying Agnico Eagle Nunavut mines from 2020 through 2022. Vessel tracks, where sufficient data are available, show vessels avoiding sensitive areas for marine wildlife.</p>	<p>1.3 Training 1.4 Mitigation 3.1 Results</p>
<p>Whale Tail PC 008, Condition 38 The Proponent shall ensure that marine shipping activities avoid sensitive wildlife habitat and species along the shipping route and use a routing south of Coats Island as the primary shipping route, subject to vessel and human safety considerations.</p>	<p>In Compliance In 2022, Agnico Eagle emphasized the importance of routing south of Coats Island. As a result, captains were required to travel north of Coats Island on three occasions due to safety issues associated with inclement weather south of Coats Island.</p>	<p>3.1 Results</p>
<p>Whale Tail PC 008, Condition 39 The Proponent shall ensure that, subject to vessel safety requirements, a setback distance of at least 500 metres is maintained from colonies and aggregations of seabirds and marine mammals during Project shipping transiting through Hudson Strait, Hudson Bay, and Chesterfield Inlet.</p>	<p>In Compliance In 2020, Agnico Eagle updated the maps and training materials showing the setbacks and mitigation measures when marine mammals and seabirds are observed. These materials were presented to Groupe Desgagnés and Woodward for distribution to all captains and bridge crew of vessels supplying Agnico Eagle Nunavut mines from 2020 through 2022. Vessel tracks, where sufficient data are available, show vessels avoiding sensitive areas for marine wildlife.</p>	<p>1.3 Training 1.4 Mitigation 3.1 Results</p>

Project Certificate and Condition #	Compliance	Section
<p>Whale Tail PC 008, Condition 40</p> <p>The Proponent shall develop and implement a ship-based marine mammal monitoring program, as part of a Marine Mammal Management and Monitoring Plan, in consultation with Fisheries and Oceans Canada, communities, and other interested parties. The Proponent shall report any accidental contact by project vessels with marine mammals or seabird colonies to applicable responsible authorities including Fisheries and Oceans Canada and Environment and Climate Change Canada.</p>	<p>In Compliance</p> <p>In 2020, Agnico Eagle updated the training materials for MMSO monitoring. These materials were presented to Groupe Desgagnés and Woodward for distribution to all captains and bridge crew of vessels supplying Agnico Eagle Nunavut projects from 2020 through 2022.</p> <p>Results of MMSO monitoring show compliance with updated training materials.</p> <p>No vessel strikes with marine mammals or seabirds were reported.</p>	<p>1.3 Training 1.4 Mitigation 3.2 Marine Mammal Results 3.3 Seabird Results Appendices A, B, C (Training documents including Mitigation Summary and SOPs)</p>
<p>Meliadine PC 006, Condition 82</p> <p>The Proponent shall require all contracted shipping companies to provide full-time marine wildlife monitoring using trained observers and established data collection and recording protocols. Monitoring plans should include provisions for all <i>Species At Risk Act</i> (SARA) and for the Committee on the Status of Endangered Wildlife in Canada (COSEWIC) listed species (birds and mammals).</p>	<p>In Compliance</p> <p>In 2020, Agnico Eagle updated the training materials for MMSO monitoring. These materials were presented to Groupe Desgagnés and Woodward for distribution to all captains and bridge crew of vessels supplying Agnico Eagle Nunavut mines from 2020 through 2022.</p> <p>Results of MMSO monitoring show compliance with updated training materials.</p> <p>No vessel strikes with marine mammals or marine birds were reported.</p>	<p>1.3 Training 1.4 Mitigation 3.2 Marine Mammal Results 3.3 Seabird Results</p>
<p>Meliadine PC 006, Condition 83</p> <p>The Proponent shall ensure that, subject to vessel and human safety considerations, all Project shipping adhere to the following mitigation procedures while in the vicinity of marine mammals (including polar bear) and birds:</p> <ol style="list-style-type: none"> Marine mammals will be given right of way; Ships will, when possible, maintain a straight course and constant speed, avoiding erratic behaviour; and When marine mammals appear to be trapped or disturbed by vessel movements, the vessel will implement appropriate measures to mitigate disturbance, including stoppage of movement until wildlife have moved away from the immediate area. 	<p>In Compliance</p> <p>In 2020, Agnico Eagle updated the maps and training materials showing the setbacks and mitigation measures when marine mammals and seabirds are observed. These materials were presented to Groupe Desgagnés and Woodward for distribution to all captains and bridge crew of vessels supplying Agnico Eagle Nunavut mines from 2020 through 2022.</p> <p>Vessel tracks, where sufficient data are available, show vessels avoiding sensitive areas for marine wildlife.</p>	<p>1.3 Training 1.4 Mitigation 3.1 Results</p>

Vessel Mitigation

Vessels are required to transit south of Coats Island whenever the weather is safe to do so. The majority (89%) of vessels servicing the Meadowbank and Meliadine projects in 2022 travelled south of Coats Island, with the exception of three occasions, one of which occurred in August due to windy conditions in Hudson Bay, and the other two occurred in October, both due to inclement weather.

Marine Mammal Monitoring

In 2022, 92 transects were surveyed for marine mammals, and 47 stationary surveys were completed. There was a total of 32 sightings (19 during dedicated surveys and 13 incidentally) of marine mammals during the 2022 shipping season, compared to 35 (surveys and incidentally) in 2021, 12 (surveys and incidentally) in 2020, seven (all during surveys) in 2019, none in 2018, and six (all incidental) in 2017. The majority of all marine mammal sightings between 2017 and 2022 were recorded in the Hudson Strait or near Marble Island and Chesterfield Inlet. There is an insufficient number of marine mammal sightings recorded to conduct a density analysis. No marine mammal-vessel interactions (e.g., strikes) were recorded by Groupe Desgagnés or Woodward in 2022, or in previous years (2017 through 2021).

Seabird Monitoring

No interactions between vessels and seabirds were recorded during the MMSO in 2022, or in previous years. Seabird survey effort on moving vessels in 2022 was similar to 2021 and higher than early years, with 163 surveys completed. Over five years of moving vessel surveys for seabirds between 2018 and 2022, 49 species and 8,624 individual birds were recorded. No new species were recorded in 2022. The most common species recorded in 2022 were northern fulmar, razorbill, herring gull, and common murre. For the second year, common murre were reported in large numbers; while they can occur in the eastern portion of the shipping zone near Newfoundland, they are not common through the majority of the survey area. It is possible that identifications of common murre were actually thick-billed murre, which occur throughout the survey area. Across all years, thick-billed murre and northern fulmar are consistently among the most commonly recorded species.

Seabird detectability and density were estimated using models which account for lower detectability of birds with greater distance from survey transects. Detectability estimates were mostly consistent between years, with the highest estimate in 2022, followed by 2019 and 2021. Despite the higher detectability estimate, 2022 had the lowest predicted seabird density. The spatial effort of surveys in 2022 was higher than all previous years, but the number of seabirds recorded was similar to other years. The differences in estimated density are a reflection of variability in the effort and number of birds detected between years.

Stationary vessel surveys in 2022 were frequently lacking records of survey time, creating a lower sample size of surveys which were used for analysis. A total of 2,592 individuals from 37 species were recorded during stationary vessel surveys from 2019 to 2022. Nearly 50% of records were from 2021, and the remaining records were almost all from 2022 and 2020. The detection rate for stationary vessel surveys is roughly half of that for moving vessel surveys. This result is generally consistent with the data, which indicate that both detections and number of birds recorded per survey were lower for stationary surveys compared to moving surveys.

Marine Wildlife Observations - Baker Lake

Agnico Eagle conducts a program of community wildlife observers on barges ferrying supplies between Helicopter Island and Baker Lake within Chesterfield Inlet. Community wildlife observers record incidental sightings of wildlife rather than completing standardized surveys. There were 54 incidental observation sheets completed in 2022 by community members in July, August, and October. On seven of these sheets, observers noted that no birds were observed during a particular time. Wildlife were observed during 47 of the 54 “surveys” conducted in 2022. During these surveys, there were 45 separate sightings

of birds (total of 117 individuals), one sighting of caribou (a group of five animals), and one sighting of a muskox group (eight animals). No marine mammals were observed. The most commonly observed birds were unknown gull species.

In addition to community wildlife observers, the shipping companies continued to record marine wildlife sightings while vessels were at anchor near Helicopter Island, or on the tugs/barges between Helicopter Island and Baker Lake to supplement the community observer effort. In 2022, the tugs (Atlantic Beech and Atlantic Elm) recorded a total of 54 incidental sightings while transiting between Helicopter Island and Baker Lake over 27 separate days between July 13 and October 24. No marine mammals were recorded incidentally, and a total of 233 seabirds were recorded across 13 different species.

In addition to the incidental sightings by the barges, vessels also completed stationary surveys while anchored at Helicopter Island and moving transect surveys when conditions allowed. In 2022 there were 34 stationary surveys for marine mammals completed at Helicopter Island, and one moving transect survey between Helicopter Island and Baker Lake. No marine mammals were observed during any of these surveys. For seabirds, 110 stationary surveys were completed (27 of which had temporal effort recorded) and 15 moving transect surveys. During stationary seabird surveys, 383 individuals across 15 different species were observed, and during moving transect surveys, 172 individual seabirds across 12 different species were observed.

1. INTRODUCTION

1.1 Project Background

Agnico Eagle Mines Limited (Agnico Eagle) contracts the shipping company Groupe Desgagnés to ship cargo and Woodward Group and Companies (Woodward) to ship fuel from Bécancour, Quebec, to its Nunavut Operations, Meadowbank and Meliadine. Since 2017, Agnico Eagle has required shipping companies to conduct vessel-based monitoring of marine mammals and seabirds using the vessel crew.

The Marine Mammal and Seabird Observer (MMSO) Annual Report summarizes results of the 2022 shipping season. The MMSO monitoring program and report satisfies the following Project Certificate Conditions from the Nunavut Impact Review Board (NIRB):

- Whale Tail NIRB Project Certificate No. 008, Terms and Conditions 38, 39, and 40 (NIRB 2020);
- Meliadine Mine NIRB Project Certificate No 006, Terms and Conditions 82 and 83 (NIRB 2022); and
- Meadowbank NIRB Project Certificate No. 004, Terms and Conditions 36 and 41 (NIRB 2018).

This monitoring program is described in:

- the Meadowbank Shipping Management Plan Version 4 (Agnico Eagle 2022a); and
- the Meliadine Shipping Management Plan Version 9 (Agnico Eagle 2022b).

In 2020, the MMSO program was improved following comments from interveners on previous years' MMSO reports. ERM worked with Agnico Eagle to:

- develop training materials, Standard Operating Procedures (SOPs), and data sheets for Groupe Desgagnés and Woodward personnel who would be acting as MMSO observers (Appendices A to C);
- develop mitigation SOPs for vessel crew when marine mammals and seabirds are observed; and
- develop and present training workshops for MMSO observers.

Since the requirements for the Meadowbank and Meliadine projects are very similar, and as initiated in 2020, the 2022 MMSO Annual Report addresses reporting for both projects.

1.1.1 Agnico Eagle Meadowbank Division

Agnico Eagle – Meadowbank Complex operates the Meadowbank and Whale Tail Mines (Figure 1.1-1). The Meadowbank Complex holds NIRB Project Certificates 004 and 008.

Shipping is carried out during the open water season (typically from July to late October) and follows recommended shipping routes that are presently in use for the annual sea lift to Chesterfield Inlet, Baker Lake, and other communities. The shipping route extends through Hudson Strait and across Hudson Bay to Chesterfield Inlet (Figure 1.1-2). There, dry cargo is lightered onto tug-assisted barges and fuel is lightered onto smaller shuttle tankers for Groupe Desgagnés and/or Woodward through the Baker Lake access passage (Chesterfield narrows, south channel) to the Meadowbank Mine barge unloading facilities and laydown area in Baker Lake.

In addition, the Meadowbank Complex is required to place a local area marine wildlife monitor on-board all vessels transporting fuel or materials for the Project through Chesterfield Inlet to satisfy the NIRB Project Certificate No. 004, Term and Condition 36.

Whale Tail Mine Certificate No. 008, Term and Condition 39 requires that project vessels must follow a setback distance of 500 m from colonies and aggregation of seabirds and marine mammals while

transiting through the Hudson Strait, Hudson Bay, and Chesterfield Inlet. To support compliance with this condition, setback polygons were created (Figure 1.1-2).

1.1.2 Agnico Eagle Meliadine Division

Agnico Eagle – Meliadine Division operates the Meliadine Mine (Figure 1.1-1). The Meliadine Project holds the NIRB Project Certificate 006.

Shipping is carried out during the open water season (typically from July to late October) and follows the recommended shipping routes presently in use for the annual sea lift to Rankin Inlet and other Kivalliq communities. The shipping route study area extends through Hudson Strait and across Hudson Bay to Rankin Inlet, with vessels anchoring either outside or inside Melvin Bay (Figure 1.1-2).

1.1.3 MMSO Annual Report Overview

This MMSO Annual Report provides an overview of:

- training, mitigation, and monitoring required on vessels;
- the vessels that supplied Meadowbank Complex and Meliadine in 2022;
- mitigation measures conducted by these vessels, including setbacks from sensitive habitats, traveling south of Coats Island and avoiding marine mammals and seabirds observed at sea;
- marine mammal monitoring conducted from 2017 to 2022 (2017 was for Meliadine only);
- seabird monitoring conducted from 2018 to 2022; and
- community surveys carried out from barges between Helicopter Island in Chesterfield Inlet and the Hamlet of Baker Lake from 2008 to 2019 and in 2022, and completed by Groupe Desgagnés and Woodward in 2020, 2021, and 2022 (due to restrictions related to the Covid-19 pandemic).

1.2 MMSO Program Objectives

The Meadowbank and Meliadine Shipping Management Plans (SMPs) outline a MMSO program within the Meadowbank Complex Marine Mammal Management and Monitoring Plan (MMMMP; Agnico Eagle 2022c) and Meliadine Marine Environmental Management Plan (MEMP; Agnico Eagle 2022d) that is implemented by Project shipping contractors (Agnico Eagle 2022a, 2022b). Groupe Desgagnés and Woodward are required to implement a MMSO program during shipping activities in the marine Regional Study Area (RSA; Hudson Strait through Hudson Bay) and in Chesterfield Inlet.

The objectives of the MMSO program are to:

1. mitigate interactions between marine mammals and seabirds and Project vessels;
2. collect information on marine wildlife presence along the shipping route; and
3. engage local community members to record sightings of wildlife opportunistically while travelling through Chesterfield Inlet.

As the MMSO related Terms and Conditions are similar between Meadowbank and Meliadine, the MMSO program is presented in one consolidated report in 2022, as was done in 2020 and 2021. This report presents a summary of the MMSO data collected by Groupe Desgagnés and Woodward on-board their vessels during the 2022 MMSO program to provide information to support Agnico Eagle's 2022 Annual Reports to the NIRB. This report also includes a summary of all data collected between 2017 and 2022.

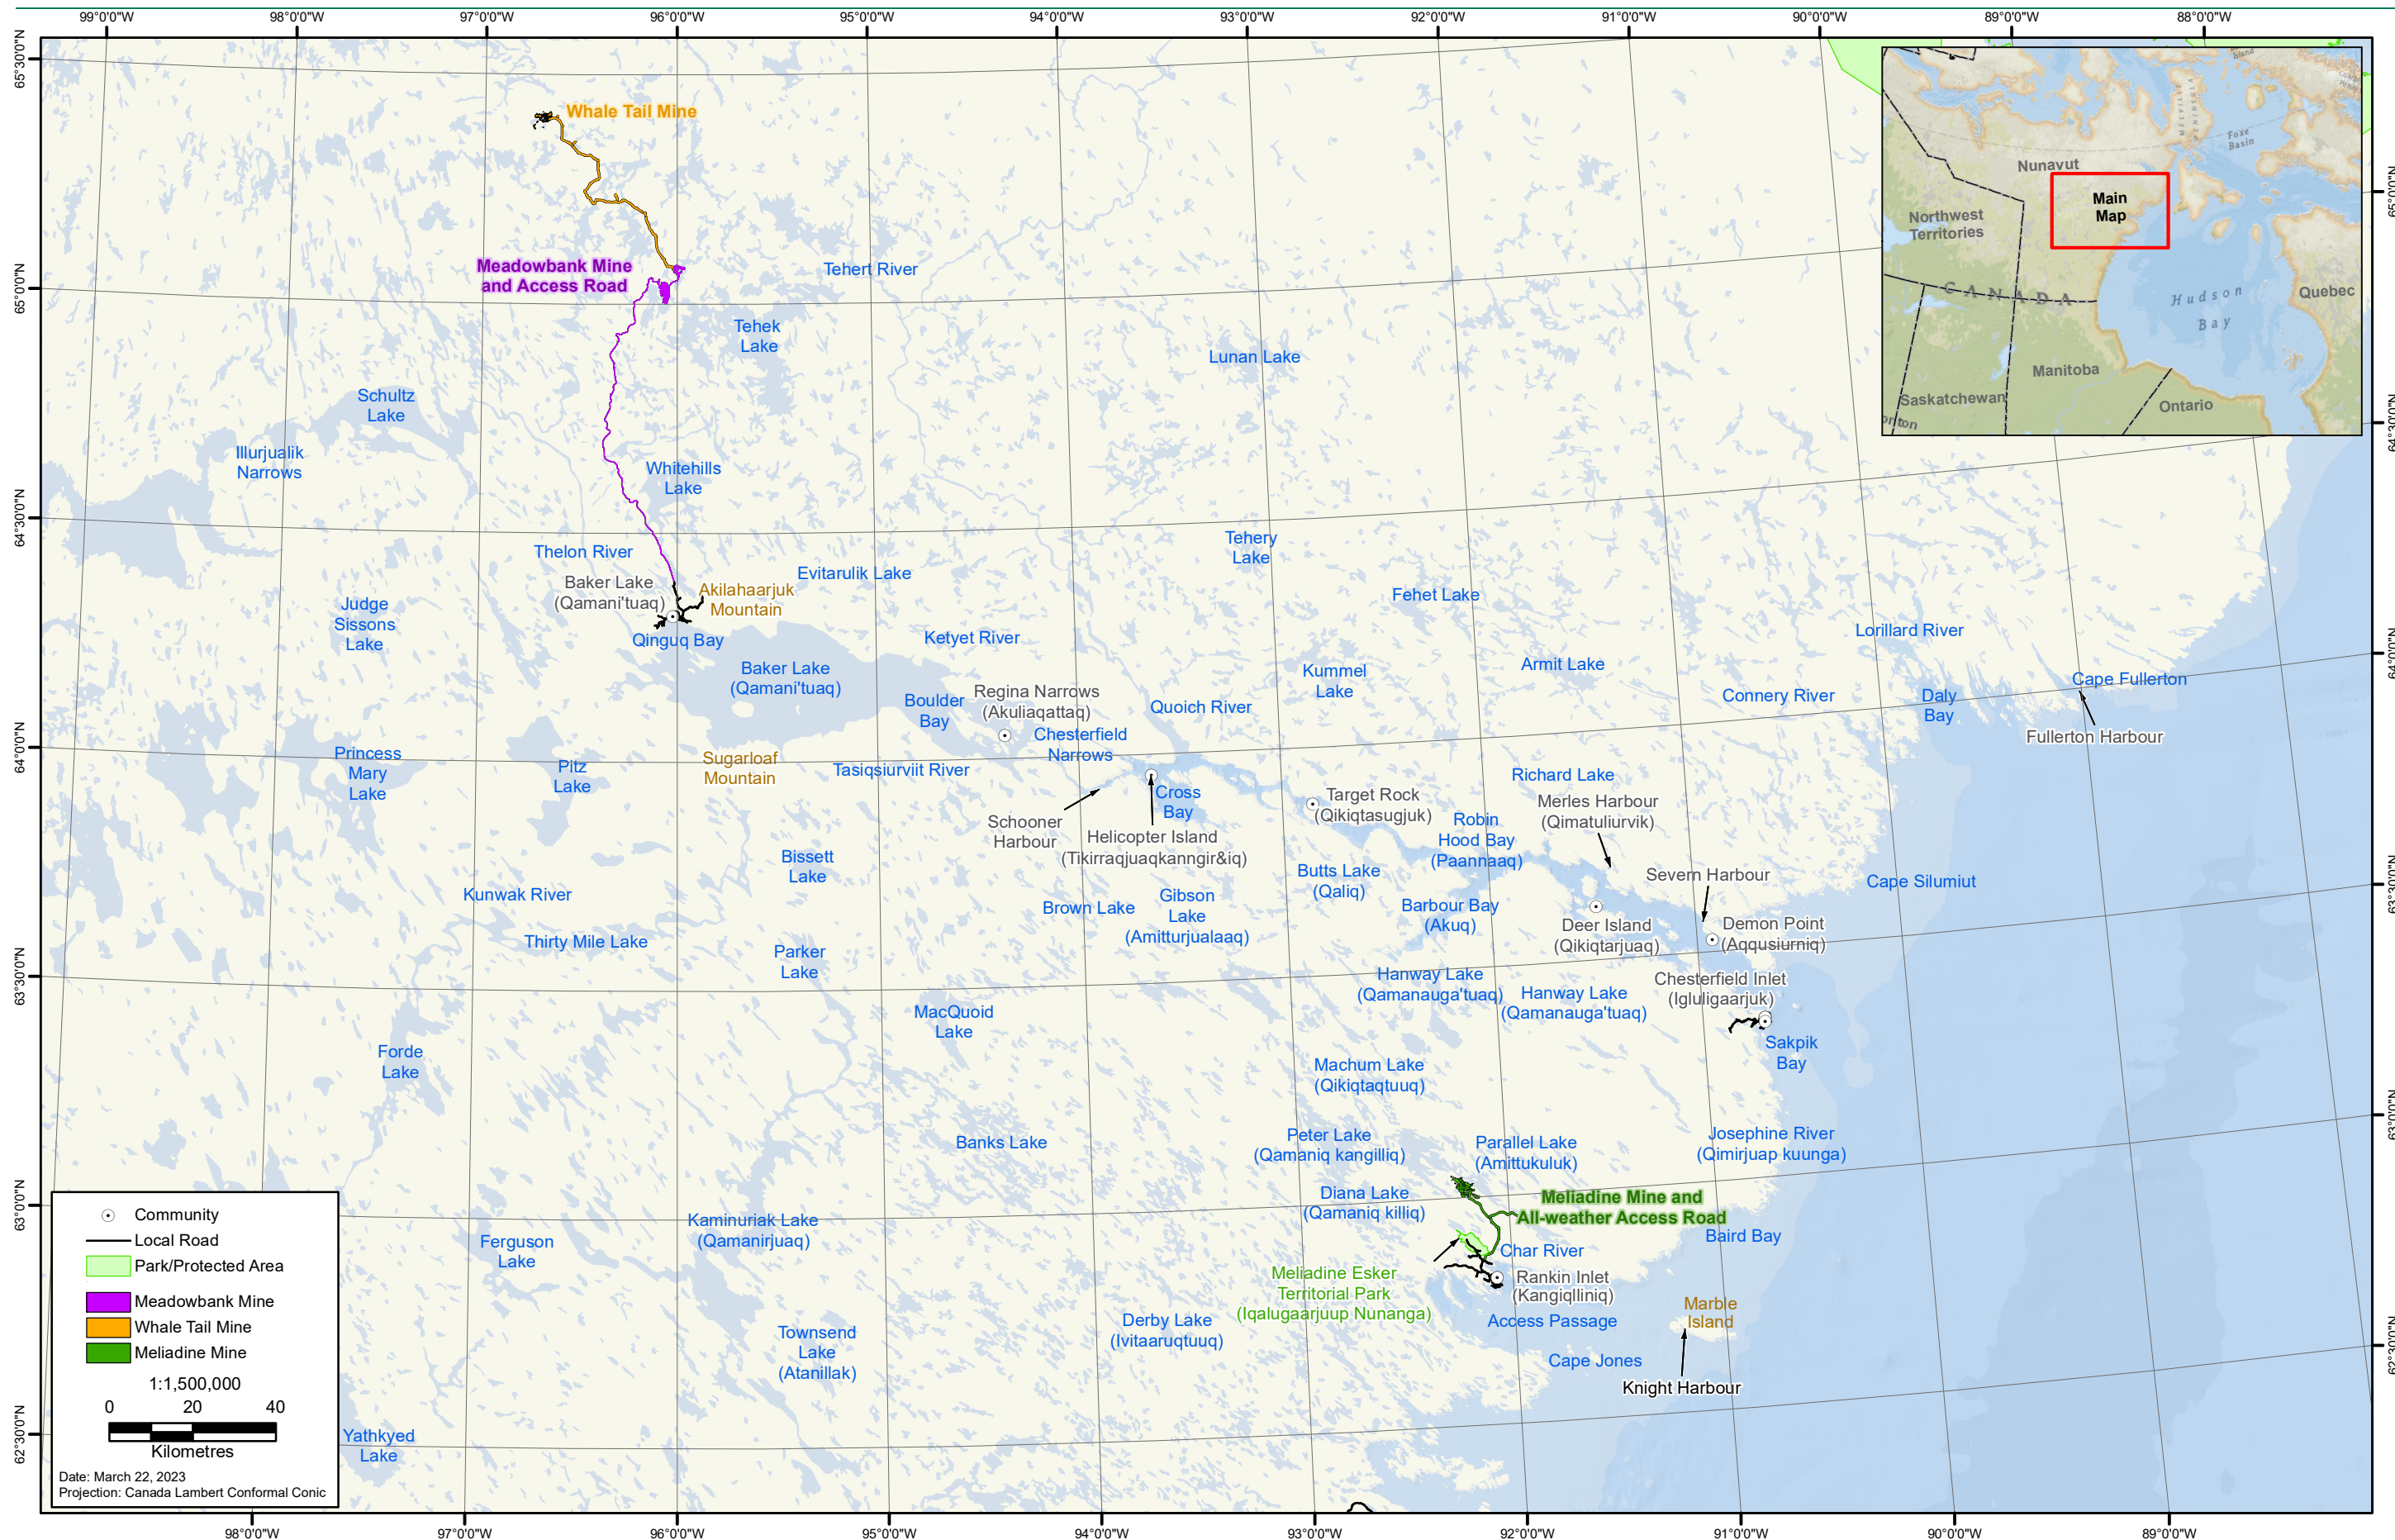

Figure 1.1-1: Meliadine and Meadowbank Mine Locations

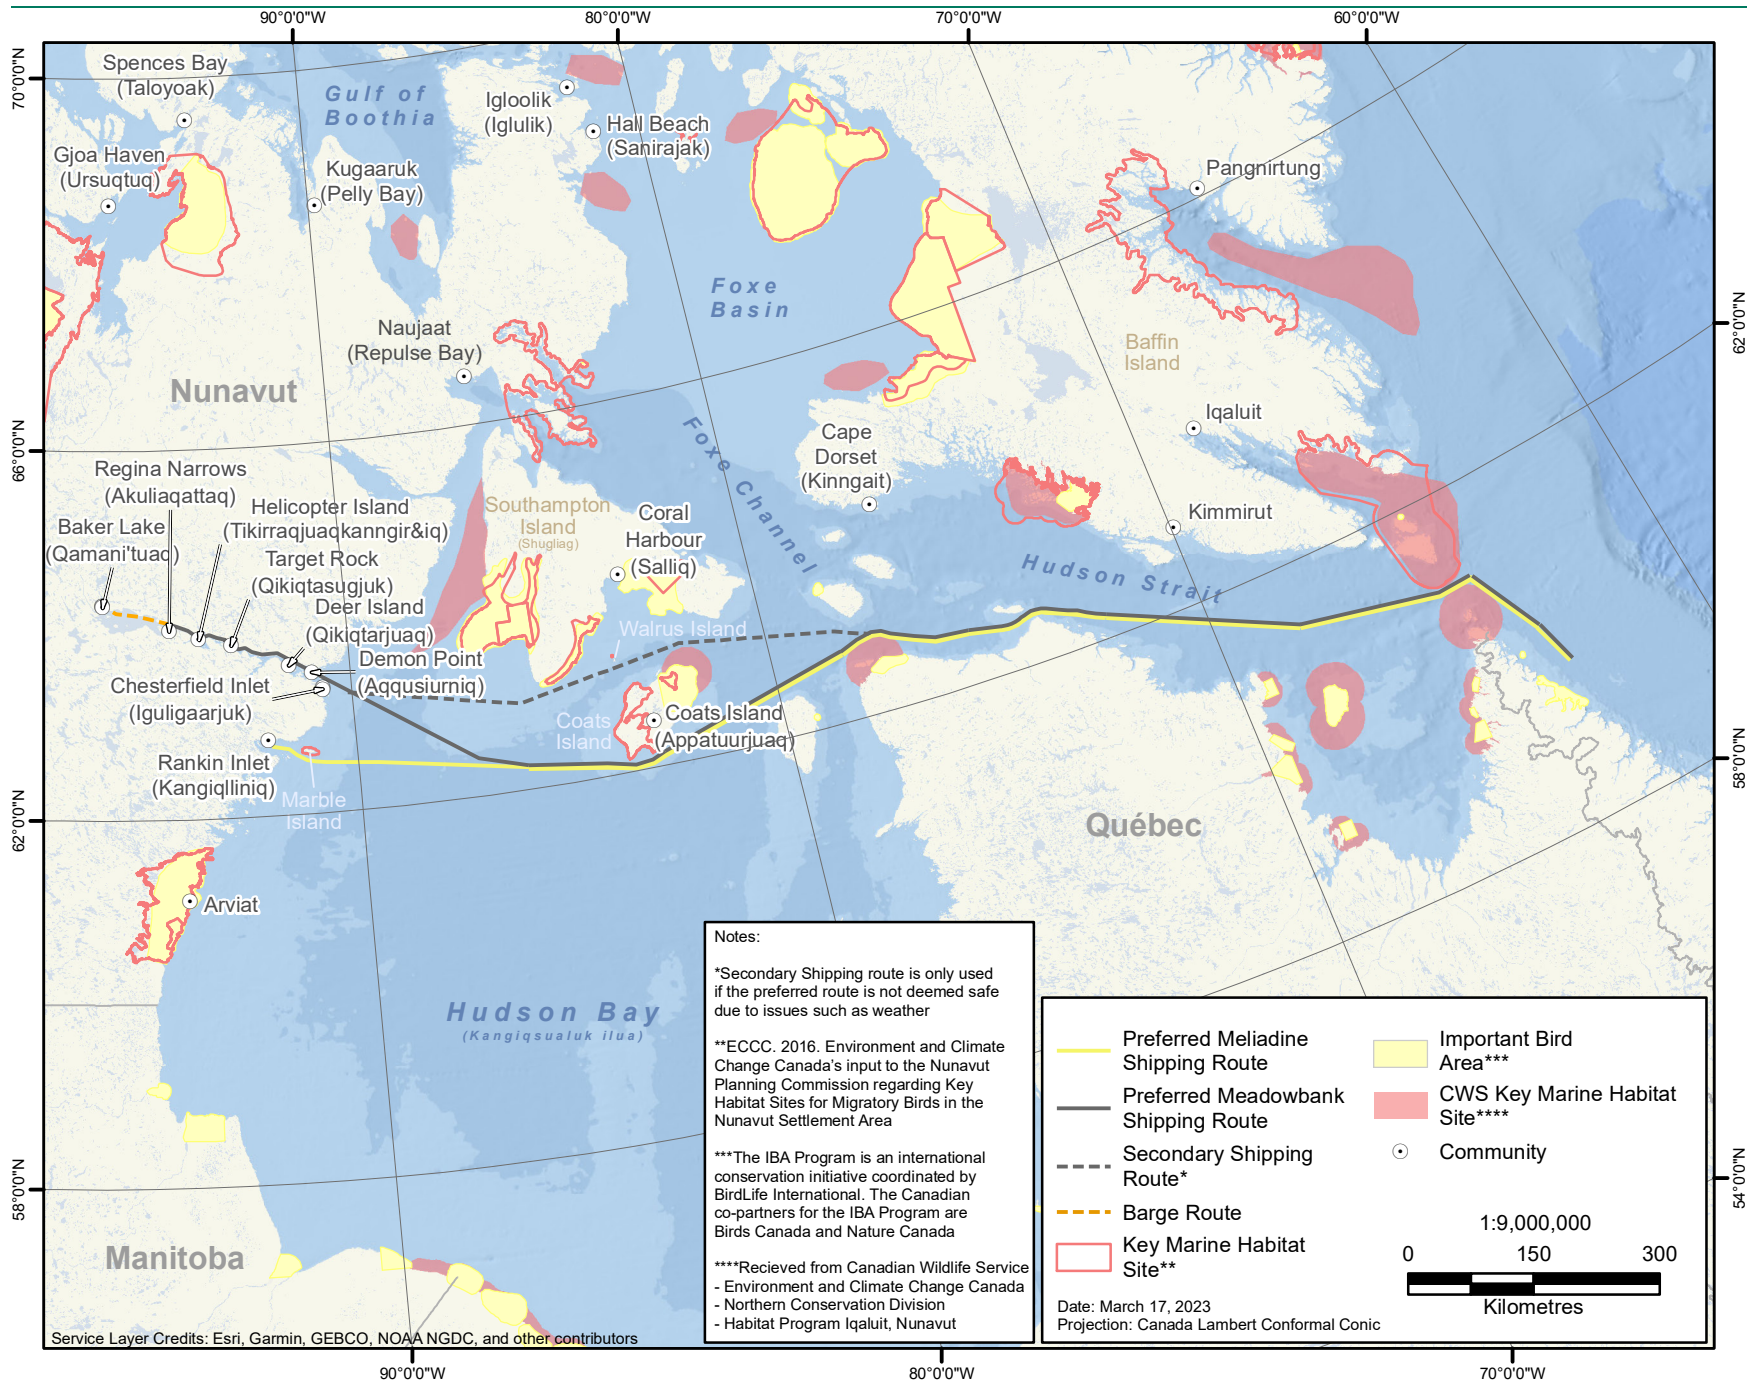

Figure 1.1-2: Marine Mammal and Seabird Observer Program Study Area along Shipping Route to Meliadine and Meadowbank Mines

1.3 MMSO Training

Training provided by Agnico Eagle for the assigned MMSOs was updated in 2020. Minor updates to the seabird datasheets were completed in 2021 and 2022 following comments from Environment and Climate Change Canada (ECCC) to encourage MMSOs to improve data collection using five-minute survey intervals for seabird surveys (see survey methods in Section 2.3). In 2022, training was provided through virtual webinars, as well as holding monthly meetings with the shipping companies to provide additional recommendations and feedback on data collection. The enhanced training material included the following:

- A Marine Shipping Mitigation Summary Brochure (Appendix A), which is required to be reviewed by all captains and assigned MMSOs, and to be kept by captains onboard the vessel at all times for easy and quick reference. This is a 10-page document summarizing guidelines for operation of vessels (e.g., how to transit near animals, preferred routes), mitigation measures for captains based on Section 4.2 of the SMPs, as well as a summary of the monitoring program and survey techniques.
- A pre-trip training presentation/webinar was created and recorded in 2020 and was required to be reviewed by vessel crew members again in 2022. The recorded webinar is also available on the ship for review by MMSOs as needed.
- All MMSOs and captains are required to review and become proficient with the material provided in the Marine Mammal Monitoring SOP (Appendix B) and the Seabird Monitoring SOP (Appendix C), which details the methods for conducting both types of surveys.
- Crew are required to learn marine mammal and seabird identification, including common species (identification guides have been provided).
- All MMSOs and captains are required to review how to fill out the *Marine Mammal Sightings Form*, *Seabird Sightings Form*, *Incidental Marine Wildlife Sightings Form*, and the *Marine Mammal and Seabird Observer (MMSO) Incident Report Form* (Attachments in Appendices B and C).
- A one-page fact sheet for marine mammal surveys and a one-page fact sheet for seabird surveys were created and provided to the shipping companies in 2022 to emphasize survey methodologies for the MMSOs.

In addition, the *Marine Mammal Sightings Form*, *Seabird Sightings Form*, *Incidental Marine Wildlife Sightings Form*, and the *Marine Mammal and Seabird Observer (MMSO) Incident Report Form* were all updated between 2020 and 2022 to improve data collection and simplify the process for the MMSOs onboard the vessels. These data sheets are provided as attachments within Appendices B and C.

1.4 Marine Mammal and Seabird Mitigation

Project Certificates 004, 006, and 008 require vessels supplying the Meadowbank Complex and Meliadine mines to avoid sensitive marine mammal and seabird habitats such as haul-outs and breeding colonies. Mitigation and management measures (summarized from Section 4.2 of the Shipping Management Plans for Meadowbank and Meliadine; Agnico Eagle 2022a, 2022b) include the following:

1. General navigational requirements while travelling through Hudson Strait to Helicopter Island or Rankin Inlet, include the following:
 - ships will, when possible, maintain a straight course and constant speed, and avoid erratic behaviour;
 - marine mammals will be given right of way as safe navigation allows;
 - the ship will not be operated in such a way as to separate an individual member(s) of a group of marine mammals from other members of the group;

- ships will maintain the required setback distances (500 m) around marine mammals and seabirds on land;
 - ships will use a routing south of Coats Island as the primary shipping route;
 - ships travelling for the Meliadine mine will remain at least 2 km from Marble Island to avoid disturbing seals, walrus and marine birds that might be in the vicinity; and
 - ships will maintain the required setback distances around marine mammals and seabirds in the water (between 100 m and 500 m depending on group size or behaviour of animals, see Appendix A).
2. As part of the shipping companies' standard operating procedures, ship crews will monitor for marine mammals and seabirds from Hudson Strait to the lightering point near Helicopter Island (Meadowbank) or Rankin Inlet (Meliadine).
 3. The ship's Master will be notified if there is a concern of the ship striking a marine mammal.
 4. Ship personnel are required to take actions to avoid a possible collision by implementing management measures (e.g., reduce speed, stop vessel until animal moves away), if safe to do so.
 5. If a collision occurs, the appropriate people will be contacted and the incident will be documented.

This report describes the vessel routes, and their avoidance of sensitive wildlife areas. The report also describes any observations of marine mammals and seabirds that would trigger mitigation and the mitigation that occurred, if any.

1.5 MMSO Program Monitoring on Vessels

The MMSO Program was developed to meet commitments made during the NIRB hearings related to marine shipping. The MMSO program is required to be conducted during all routine shipping activities along the shipping route from Bécancour to the project. The program includes collection of information on marine wildlife species presence along the shipping route. In addition, surveys are occasionally conducted while the vessel is anchored at Helicopter Island or Rankin Inlet. The marine mammal and seabird monitoring is conducted by ship's crew and methods are provided in Section 2 and Appendices B and C. Results of MMSO monitoring at sea are reported in Sections 3.2 and 3.3.

1.6 Marine Wildlife Observations – Baker Lake

When transporting dry cargo and fuel from Bécancour to Baker Lake, deep-water vessels can enter Chesterfield Inlet, but must stop at Helicopter Island (Tikirraqjuaqkanngir&iq) at the west end of the Inlet. There, material is loaded aboard barges, and tugs move the barges through the narrow passage connecting Chesterfield Inlet to Baker Lake, and then on to the hamlet of Baker Lake.

To satisfy NIRB Project Certificate No. 004, Term and Condition 36, Agnico Eagle's Meadowbank Complex is required to engage a local area marine wildlife monitor onboard all vessels transporting fuel or dry cargo for the mine on barge shipping between Helicopter Island and Baker Lake.

During 2020 and 2021, due to the Covid-19 pandemic, Inuit observers were not allowed aboard vessels; therefore, marine wildlife observations were only made by vessel crew when possible. In 2022, standard practice resumed, and local monitors were again onboard vessels to record sightings of wildlife. Results of marine wildlife monitoring between Helicopter Island and Baker Lake are reported in Section 3.4. In addition to local monitors, both Groupe Desgagnés and Woodward MMSOs completed marine wildlife observations in 2022 between Helicopter Island and Baker Lake. These results are presented in Sections 3.2 and 3.3 and summarized in Section 3.4.1.

2. METHODS

Groupe Desgagnés and Woodward crew members were assigned MMSO duties and were trained to complete the surveys following the SOPs (Appendices B and C) and in accordance with the methods outlined in the SMPs (Agnico Eagle 2022a, 2022b). These methods are summarized below and described in detail in Appendices B and C.

2.1 Vessel Tracks

Agnico Eagle provided ERM with a list of vessel names and dates of delivery for shipments to Meadowbank and Meliadine. Each vessel is required by Transport Canada to transmit Automatic Identification System (AIS) data via a transceiver on board. These data are used by other vessels and Vessel Traffic Services (VTS) to monitor vessel movements. ERM acquired archived AIS data from Vesseltracker, a commercial AIS supplier that aggregates AIS data from satellite and shore-based stations. These data vary in frequency based on distance from shore, location of shore-based stations, and position of satellites. In some cases, AIS position data is available on an hourly or sub-hourly basis, but in other cases, position data can be 12 hours or more between fixes.

Tracks for the vessel names and dates provided by Agnico Eagle were downloaded from Vesseltracker (2023) and plotted using ArcGIS 10.8.1. Only vessels traveling to Meadowbank or Meliadine are presented in this report. In addition, important bird areas and marine mammal aggregations were buffered by 500 m, and Marble Island was buffered by 2 km, as defined by the SMPs (Agnico Eagle 2022a, 2022b), to establish setback polygons. A Geographic Information System (GIS) was used to perform an overlay and near analysis to identify which lines and points intersected or were in close proximity to these buffered areas.

2.2 Marine Mammals

MMSO observations were completed while the vessels were traveling to Agnico Eagle mines. Surveys are carried out by the dedicated MMSO from a high location on the vessel, either on the bow or in the wheelhouse, depending on weather. One to three surveys are completed daily from the same location on the vessel each time. Marine mammal surveys last for a minimum of 1.5 hours to not more than two hours to mitigate observer fatigue and eyestrain. A precise scan routine is carried out throughout the marine mammal observation period as described in the MMMMP and the Marine Mammal Survey SOP (Agnico Eagle 2022c, 2022d; Appendix B).

All marine mammals observed during the dedicated marine mammal survey periods are recorded on the “*Marine Mammal Sightings Form*”, including GPS location, distance to animal, angle to animal, number of individuals, species, and behaviour. If a marine mammal is observed during the voyage outside of the dedicated marine mammal observation period (i.e., off-effort), this is recorded as an incidental sighting on the “*Incidental Marine Wildlife Sightings Form*” (Appendix B).

Further details regarding survey methods for marine mammals are provided in the SOP provided in Appendix B, and within the MMMMP (Agnico Eagle 2022c, 2022d).

2.2.1 Marine Mammal Data Analysis

This section outlines the methods used to summarize the environmental conditions, observer effort, and marine mammal sightings related to the information recorded by Groupe Desgagnés and Woodward. There were not enough marine mammal sightings recorded during the MMSO programs to conduct a density analysis. However, after an additional shipping season and due to the improvement in data collection in recent years, the possibility for a density analysis will be revisited in 2023.

2.2.1.1 Temporal and Spatial Observation Effort

Temporal (hours) and spatial (km) marine mammal observation effort was defined as the effort dedicated to marine mammal surveys as recorded by Groupe Desgagnés and Woodward on the MMSO datasheets. Marine mammal spatial effort was calculated as linear kilometres using GPS coordinates that were recorded at the start and end of each MMSO survey transect. Start and end times were recorded on the datasheets and were used to determine temporal effort (i.e., the time spent completing marine mammal surveys). If a start or end location, or a start or end time was not entered in the datasheet, then spatial and/or temporal effort could not be calculated for that survey and was excluded from the survey effort.

2.2.1.2 Environmental Variables

Environmental variables were recorded on the datasheets during surveys. These variables include wind speed and direction, sea state (Beaufort scale), weather (e.g., precipitation and cloud conditions), visibility (in km), and sun glare. Environmental variables were summarized as a percentage of observation effort.

2.3 Seabirds

Dedicated MMSOs are directed to complete surveys from moving and stationary platforms according to the Eastern Canada Seabirds at Sea (ECSAS) standardized protocol for pelagic surveys from moving and stationary platforms (Gjerdrum et al. 2012). Surveys for seabirds were conducted by the dedicated MMSO from a high location on the vessel, either on the bridge or in the wheelhouse, depending on weather. Surveys are carried out at the same location on the vessel as much as possible. Surveys are best completed along a transect line; therefore, it is best to start a seabird observation period when the vessel is and will be moving in a straight line for an extended period of time (i.e., Moving Vessel Surveys, Appendix C Section 2.4.3). If the vessel is stationary (e.g., anchored) for a day or portion of a day, then a seabird survey will be required while anchored to ensure the minimum of one survey per day is met (i.e., Stationary Vessel Survey, Appendix C Section 2.4.4). Training for crew members focused on following the ECSAS protocol, which involves surveys conducted in 5-minute “snapshot” intervals, as per recommendations by ECCC.

For both survey types (moving and stationary), binoculars or spotting scopes are used to confirm species identification and other details when necessary. All seabirds observed during surveys are recorded including species, number of individuals, location (in flight or on water), distance to the vessel, and behaviour. Additional information regarding the seabird surveys can be found in Appendix C.

MMSOs are directed to complete each seabird survey period on a moving vessel during six consecutive five-minute periods and repeated three times a day to capture morning, afternoon and evening periods, when possible. A precise scan routine is conducted within 300 m from the vessel as described in the MMMMP and the Seabird Survey SOP (Agnico Eagle 2022c, 2022d; Appendix C). All birds observed within this 300 m transect, whether flying or on the water, are recorded and considered in-transect sightings.

Stationary vessel surveys are carried out as a 180° semi-circle scan of the surrounding area from the front (bow) of the vessel. Birds within 300 m are considered inside the survey area; however, birds beyond 300 m are still recorded. The survey ends when all seabirds within the semi-circle have been recorded, or if no seabirds are seen during the initial scan, the survey is complete.

If a seabird is observed during the voyage outside of the dedicated seabird observation period (i.e., off-effort), this is recorded as an incidental sighting on the “*Incidental Marine Wildlife Sightings Form*” (Appendix B).

2.3.1 Seabird Data Analysis

2.3.1.1 Temporal and Spatial Observation Effort

The number of survey hours and kilometres (km) were recorded as indices of effort for seabird surveys. Seabird spatial effort was calculated as linear kilometres using GPS coordinates that were recorded by Groupe Desgagnés and Woodward at the start and end of each survey. Start and end times recorded on datasheets were used to determine temporal effort (i.e., the time spent completing seabird surveys). Spatial effort is reported for moving vessel surveys only, while temporal effort is reported for both moving vessel and stationary vessel surveys.

In 2022, crew member training focused on emphasizing five-minute interval surveys, as per the Eastern Canada Seabirds at Sea (ECSAS) standardized protocol for pelagic surveys from moving and stationary platforms (Gjerdrum et al. 2012). Therefore, in 2022, shipping companies recorded start/end time and position for each five-minute interval of a survey (for moving vessel surveys). Each survey consisted of six five-minute intervals. Survey effort was summarized by incorporating all six intervals. However, each five-minute interval was considered separately for distance models because the precise start and end locations are required for modelling.

2.3.1.2 Environmental Variables

Environmental conditions were recorded on survey datasheets: wind speed (Beaufort scale) and direction, sea state, weather (e.g., precipitation and cloud conditions), visibility, and sun glare. Environmental variables were summarized according to the number of seabird detections so that any trends with poorer weather or visibility conditions could be visually assessed.

2.3.1.3 Data Analysis

Distance analyses estimate the diminishing detectability of objects (e.g., birds) with greater distance from observers. For example, a bird flying within 50 m is more likely to be seen and identified than a bird flying 300 m away from an observer. Because birds at greater distances are more likely to be missed during surveys, the number of birds recorded does not represent the true abundance of birds in the area. Distance models take these detectability changes into account and allow more accurate estimation of seabird density (Buckland et al. 2001). Seabird monitoring records included observations of seabirds at varying distances from the vessel. Data from a moving vessel can be approximated as sampling along line transects. This analysis is also possible for point data (i.e., stationary vessel surveys), but estimates of seabird density require repeated observations at the same point locations. Therefore, the analysis of the stationary vessel surveys only includes detection estimates, but not density estimates.

2.3.1.4 Moving Vessel Surveys – Data Analysis

Density of seabirds was estimated via distance modelling of moving vessel surveys, with comparison of results between years of surveying. Distance model selection did not include environmental variables, due to low sample size limiting modelling fitting capabilities (Buckland et al. 2001); visual assessment of variation in detection rate according to environmental variables was conducted to determine if any major anomalies were present with poor weather such as rain, snow, or fog.

Analysis of seabird data was performed using the Distance software adapted for R (Distance package v 1.0.7, run on R v 4.1.1; Miller et al. 2019, R Core Team 2021). First, model “key functions” are fit to the data to determine the general shape of the model curve, which describes the change in detection with distance. The three main key functions are: hazard rate, half-normal, and uniform. For example, a uniform function indicates that detection drops off consistently with distance (e.g., a bird is less likely to be seen at

50 m than 0 m, and less likely still to be seen at 100 m). Hazard rate and half-normal curves maintain consistent detection for a certain distance, but detection drops off more steeply at farther distances (e.g., a bird is just as likely to be detected if it is within 100 m but much less likely to be detected past 150 m; Miller et al. 2019). These key functions can have adjustment terms which refine the main model fit: cosine, simple polynomial, and hermite polynomial (a type of orthogonal polynomial) adjustments. All model key function and adjustment combinations were tested for fitting the data.

The observation data were binned into distance categories for analysis: 0-50 m, 50 to 100 m, 100 to 200 m, and 200 to 300 m. The closest distance bins were considered for grouping in case of evasive movements causing an abnormal detection distribution (e.g., if there are more sightings > 50 m away because birds dive or fly away as the ship approaches), but there did not appear to be any anomalies in the data requiring the distance bins to be grouped differently. Models accounted for variable detection according to group size; density estimates results are presented as individuals per km². Analyses included only on-transect sightings and did not use re-sightings of the same birds.

Models were selected using the minimum Akaike's Information Criterion (AIC; Akaike 1973). AIC values provide relative rankings between models fit with the same data, where the lowest AIC ranked model is considered the best fit to the data. Top models were also checked for adequate goodness of fit indices including plotting model curves against the data.

2.4 Marine Wildlife Observations – Baker Lake

When transporting equipment and fuel from Bécancour to Baker Lake, deep-water vessels can enter Chesterfield Inlet, but must stop at Helicopter Island (Tikirraqjuaqkangir&iq) at the west end of the Inlet. There, material is loaded aboard barges, and tugs move the barges through the narrow passage connecting Chesterfield Inlet to Baker Lake, and then on to the hamlet of Baker Lake.

To satisfy NIRB Project Certificate No. 004, Term and Condition 36, Agnico Eagle's Meadowbank Complex is required to engage a local area marine wildlife monitor onboard all vessels transporting fuel or materials for the Mine on barge shipping between Helicopter Island and Baker Lake. Local area marine wildlife observers record all observations of wildlife as incidental sightings. Note that in 2020 and in 2021, community members were not permitted to board vessels due to health and safety restrictions in place related to the Covid-19 pandemic. Therefore, Groupe Desgagnés and Woodward had their MMSOs record sightings of marine mammals and seabirds when possible while travelling on the barge, following methods described in Section 2.2 and 2.3. Local monitors and Groupe Desgagnés and Woodward MMSOs completed the marine wildlife surveys in 2022, with results from the vessel companies presented in Sections 3.2 and 3.3 and summarized in Section 3.4.1.

3. RESULTS

3.1 Shipping Activity in 2022

During the 2022 shipping season, a total of 27 vessels, (two of which were tugs, 14 cargo, and 11 fuel) travelled to Meadowbank (13 vessels), Meliadine (seven vessels), or to both Meadowbank and Meliadine (seven vessels) between July 3 and November 11, 2022 (Table 3.1-1; Figure 3.1-1 through 3.1-4). Vessel tracks broadcast using Automated Information System (AIS) vessel positioning were downloaded from Vesseltracker (2022) and plotted using ArcGIS 10.8.1.

Table 3.1-1: Summary of Groupe Desgagnés and Woodward Vessels during the Shipping Season, July to November 2022

Vessel Name	Fuel or Cargo	Project and Number of Trips			Total Trips
		Meadowbank	Meliadine	Meadowbank and Meliadine	
Kivalliq W	Fuel	1	-	1	2
Kitikmeot W	Fuel	2	-	-	2
Tuvaq W ¹	Fuel	2	-	-	2
Qikiqtaaluk W	Fuel	-	2	1	3
Marlin Ametrine	Fuel	2	-	-	2
Nordika Desgagnés	Cargo	1	2	1	4
Atlantic Elm Tug ²	Cargo	1	-	-	1
Atlantic Beech Tug ²	Cargo	1	-	-	1
Acadia Desgagnés	Cargo	1	-	-	1
Claude Desgagnés	Cargo	-	1	1	2
Sedna Desgagnés	Cargo	-	1	-	1
Zélada Desgagnés	Cargo	1	-	1	2
Miena Desgagnés	Cargo	1	1	2	4
Total		13	7	7	27

¹The Tuvaq W. was also transiting between Helicopter Island and Baker Lake for the Meadowbank mine between August 15 and August 23; however, this is not included as a separate trip due to the nature of the vessel transiting only locally.

²The Atlantic Elm and Atlantic Beech Tugs were also transiting between Helicopter Island and Baker Lake for the Meadowbank mine between July and October; however, these are not all considered separate trips due to the nature of the tug transiting only locally.

Most (67%) of these vessels delivered cargo and fuel exclusively for Agnico Eagle, while nine trips also conducted community re-supply before visiting Agnico Eagle mines, including the following:

- Three vessels in July (Kivalliq W., Tuvaq W. and Zelada Desgagnés.; Figure 3.1-1).
- One vessel in August (Acadia Desgagnés; Figure 3.1-2).
- One vessel in September (Sedna Desgagnés; Figure 3.1-3).
- Four vessels in October and November (Tuvaq W., Qikiqtaaluk W., Kivalliq W., and Marlin Ametrine; Figure 3.1-4).

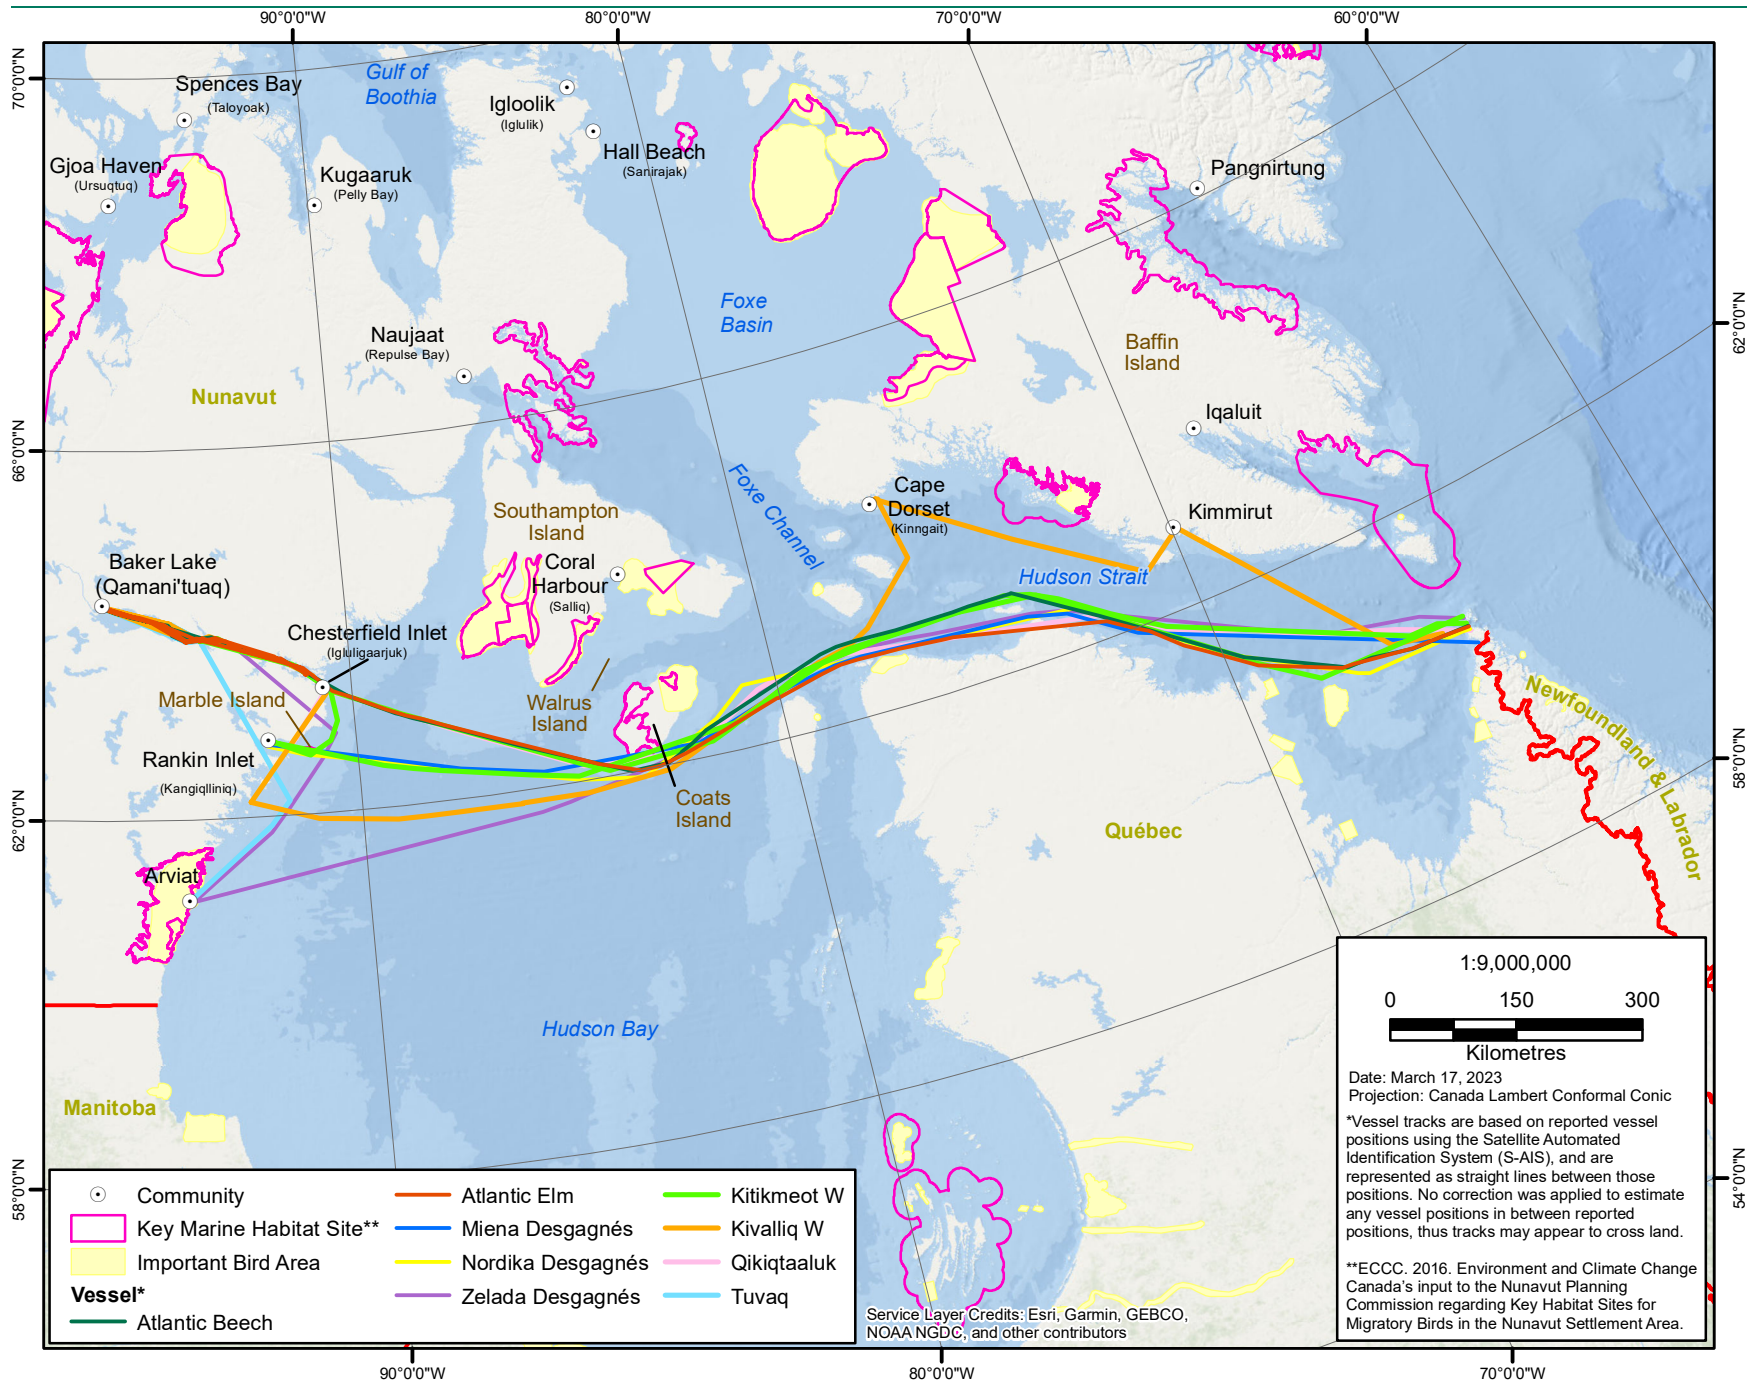

Figure 3.1-1: Groupe Desgagnés and Woodward Shipping Tracks, July 2022

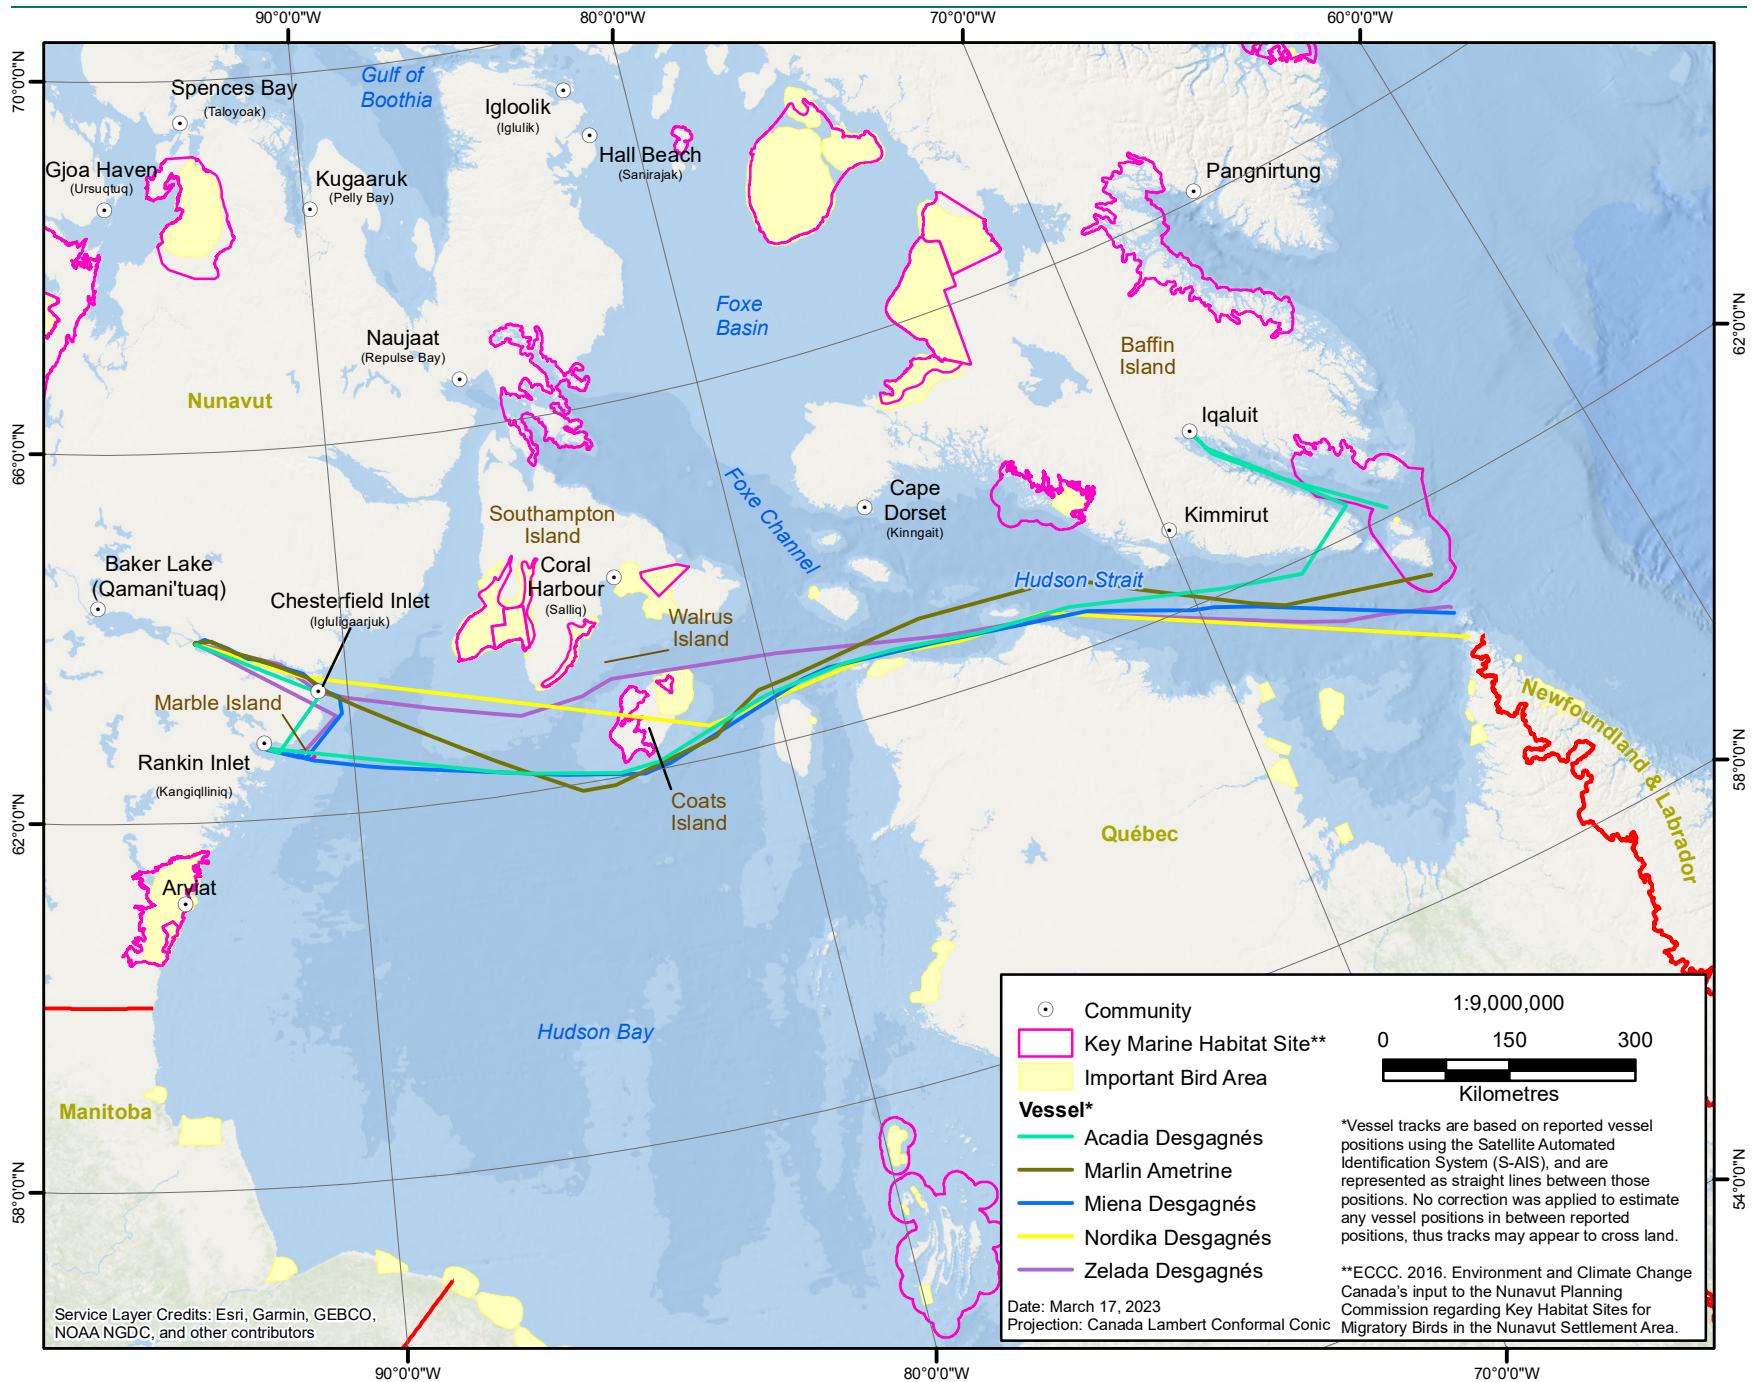

Figure 3.1-2: Groupe Desgagnés and Woodward Shipping Tracks, August 2022

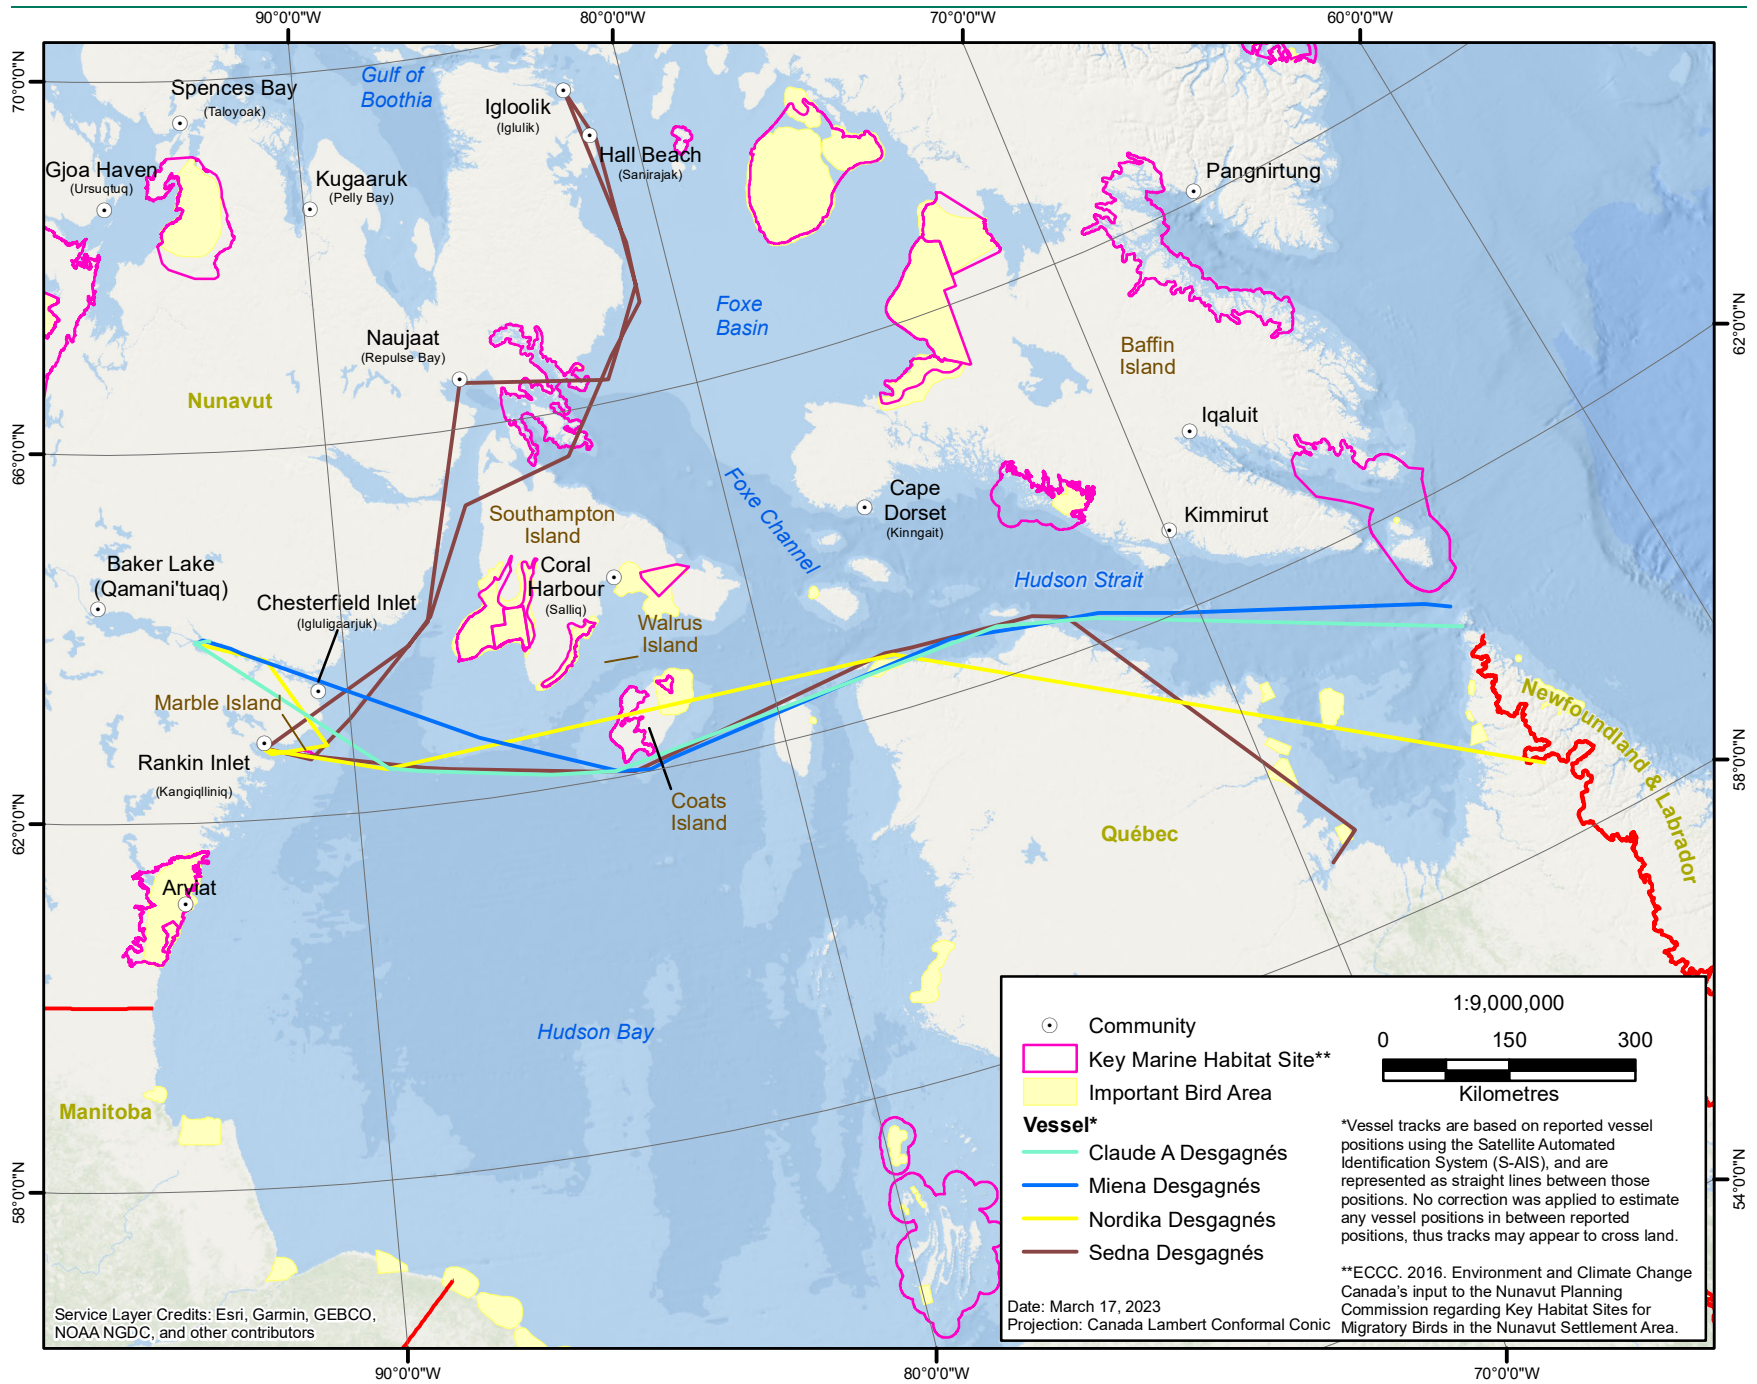

Figure 3.1-3: Groupe Desgagnés and Woodward Shipping Tracks, September 2022

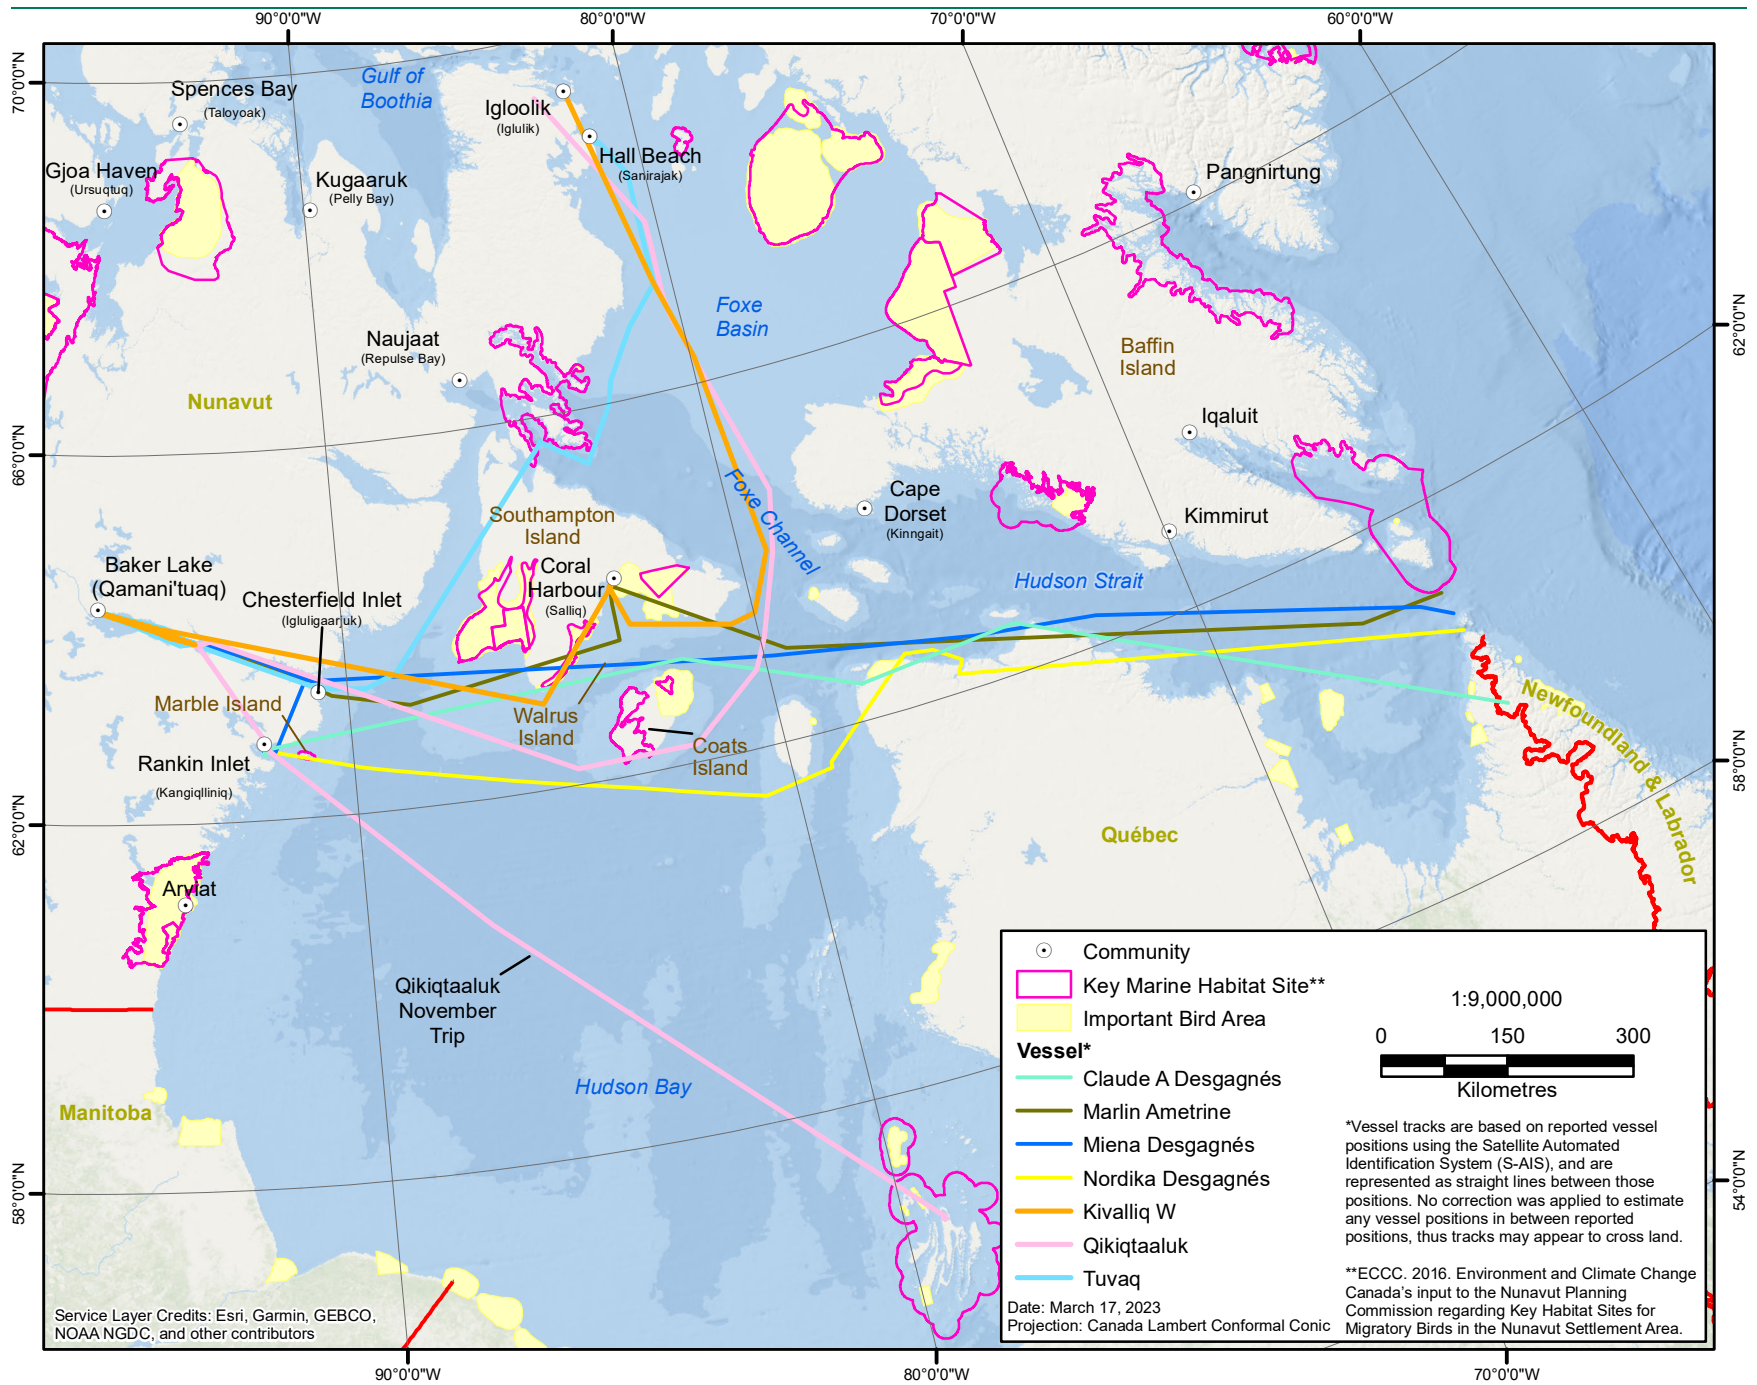

Figure 3.1-4: Groupe Desgagnés and Woodward Shipping Tracks, October and November 2022

3.1.1 Mitigation Measures – Setbacks from Sensitive Habitats

Project vessels must follow a setback distance of 500 m from colonies and aggregation of seabirds and marine mammals while transiting through the Hudson Strait, Hudson Bay, and Chesterfield Inlet, and a setback distance of 2 km from Marble Island. Maps were produced that included these locations, buffers, and the vessel tracks.

Where AIS data was recorded frequently (every hour), vessel tracks avoided the setback areas. However, in some cases, the AIS data was recorded less frequently (every 6 to 12 hours). These long delays between position fixes create erroneous vessel tracks, with vessels in some cases appearing to cross dry land and in other cases appearing to cross the setback areas. For example, during a vessel trip by the Nordika Desgagnés in August (Figure 3.1-2) and another trip in September (Figure 3.1-3), no positions were recorded over two days between August 14 and August 16, or between September 16 and September 18, respectively; therefore, the vessel tracks both appear as straight lines going directly across Coats Island. Due to the poor resolution of this data, information (e.g., route, setbacks) regarding these trips cannot be extrapolated with confidence.

Track data is based on satellite positioning; therefore, ship track intersections likely occurred due to lack of ship track resolution and the intersection of existing points to create a continuous shipping track.

Groupe Desgagnés and/or Woodward vessel tracks appeared to cross through the 2 km setback polygon at Marble Island on six occasions, and at the Coats Island setback polygon on six occasions (Figures 3.1-1 through 3.1-4). However, when examining the data, it appears that a vessel only entered the 2 km Marble Island buffer on one occasion, described below.

In all cases where track lines appeared to intersect the setbacks, the point locations were investigated further. From these 12 tracks, only one location point received from the satellite AIS was located within the setback polygons: on one occasion in August, the Miena Desgagnés appeared to be within the 2 km setback buffer around Marble Island. No other points were recorded within the Marble Island setback. The closest ship track point to the Coats Island setback was recorded by the Miena Desgagnés in October, 11.4 km from the setback polygon. Therefore, it is unlikely that the ship passed directly through the setbacks and that the intersections are due to lack of ship track resolution. Vessel captains will be reminded of the importance of maintaining a 2 km buffer around Marble Island prior to the start of the 2023 shipping season.

3.1.2 Mitigation Measures – Coats Island

The corridor between Southampton and Coats Islands has been identified by the community of Coral Harbour as an important breeding ground for walrus and marine birds, and as a potential migration route for marine mammals. Due to concerns that vessel traffic between Coats Island, Walrus Island (north of Coats Island) and Southampton Island may disturb these animals, vessels are required to transit south of Coats Island whenever the weather is safe to do so.

Of the 27 vessels servicing the Meadowbank and Meliadine mines in 2022, the majority (89%, 24 trips) travelled south of Coats Island. Vessels travelled north of Coats Island on the following three occasions (Figures 3.1-2 and 3.1-4):

1. On August 21, the Zelada Desgagnés was required to use the north passage due to high winds.
2. On October 6, the Miena Desgagnés was required to use the north passage due to high seas in Hudson Bay.
3. On October 13, the Claude Desgagnés was required to use the north passage due to high winds.

3.1.3 Mitigation Measures – Avoidance of Marine Mammals and Seabirds

Ships are required to follow mitigation measures outlined in Section 4.2 of the SMPs (Agnico Eagle 2022a, 2022b), summarized in Section 1.4 and Appendix A. In 2022, one incidental sighting of a polar bear triggered mitigation measures by the vessel on July 24. The animal was observed in the water swimming approximately 100 m from the vessel near Marble Island. As per the *Shipping Management Plans* (Agnico Eagle 2022a and 2022b) vessels are required to reduce speed and if possible, cautiously move away from the animal if a marine mammal approaches within 500 m of a ship. Therefore, in compliance with these guidelines, the vessel altered its course to increase the distance between the vessel and the polar bear. As a result, the vessel passed the polar bear approximately 200 m away. No other mitigation measures were reported in 2022. No incidents with marine mammals or seabirds were reported for the 2022 shipping season.

3.2 Marine Mammal Observations

3.2.1 Survey Effort

Surveys were conducted in 2022 by dedicated crew MMSOs between Hudson Strait and Rankin Inlet/Helicopter Island between July 4 and October 23 on board various Groupe Desgagnés and Woodward vessels. A total of 161 marine mammal surveys were conducted in 2022. However, of the 161 surveys, 22 (18 moving vessel surveys and four stationary surveys) were excluded from the analysis of survey effort due to missing start and/or end times, or missing start and/or end latitudes or longitudes. Therefore, a total of 139 marine mammal surveys (92 while the vessel was moving, and another 47 surveys while the vessel was stationary) were completed in 2022.

The 92 transects surveyed while the vessel was moving included a total spatial effort of 2,765.8 km of marine mammal transects over 109.3 hours (Table 3.2-1; Figure 3.2-1). An additional 56.6 hours of surveying was completed while the vessel was anchored. Of the 47 stationary surveys completed while the vessel was anchored, 35 were conducted within Chesterfield Inlet near Helicopter Island, and the remaining 11 were conducted in Rankin Inlet. One stationary survey was completed while the vessel was anchored at Ivujivik near Digges Islands. Appendix D summarizes all marine mammal surveys and sightings information.

Table 3.2-1: Marine Mammal Survey Effort, 2017 to 2022

Year of Survey	Moving Surveys			Stationary Surveys
	Number of Transects Surveyed	Total km Surveyed (Spatial Effort)	Total Time Surveyed (Temporal Effort; hr)	Total Time (hr) Anchored Vessel
2017	11	NA ¹	10.25	0.00
2018	31	1,155.7	29	0.00
2019	38	1,898.3	62.82	59.25
2020	58	2,354.7	112.33	92.5
2021	56	2,824.9	110.5	80.4
2022	92	2,765.8	109.3	56.6
Total	286	8,644.7	434.2	288.75

¹ Spatial data for the 2017 surveys are not available.

According to the observation datasheets completed by Groupe Desgagnés and Woodward, marine mammal observer effort in 2022 was similar to 2021 and 2020, all of which were greater than previous years (Table 3.2-1). In 2022, observer effort during transit was 109.3 hours and 2,765.8 km, and an

additional 56.6 hours of effort while the vessel was anchored, compared to 2021, when effort during transit was 110.5 hours and 2,824.9 km, and an additional 80.4 hours of effort while the vessel was anchored. In 2020, observer effort during transit was 112.3 hours and 2,354.7 km. A total of 92.5 hours of effort was conducted while anchored in 2020. In 2019, observer effort during transit was 62.8 hours and 1,8.3 km with 59.3 hours of stationary effort.

Datasheets with missing survey times, dates and/or GPS coordinates were not incorporated into the effort analysis. In 2022, there were 18 transects while the vessel was moving that were missing either a start or end time, or the GPS coordinates for the start or end location of the transect, and four stationary surveys that were missing start or end times (i.e., no temporal effort). Sightings during these surveys are reported as incidental observations (see Table 3.2.3).

3.2.1.1 Environmental Variables and Weather Conditions

The weather conditions (Figure 3.2-2a) for the 2022 marine mammal observation program were predominantly partly cloudy, cloudy, or clear (41%, 27%, and 19% of the survey effort, respectively). Rain and fog were present for a combined 9% of the survey time, while 4% of the survey effort lacks weather data. Average visibility extended to 11 km, with a maximum of 30 km and minimum of 1 km.

The sea state (Figure 3.2-2b) ranged from sea state 0 (calm) to sea state 6 (large waves with white foam crests); however, the sea state fell predominantly within states 0 (calm), 1 (ripples), and 2 (small wavelets all over; 20%, 22% and 20% of the survey effort, respectively). Large wavelets, few whitecaps (sea state 3) occurred 18% of the survey effort while sea state 4 (small waves, frequent whitecaps) occurred slightly more frequently (10% of survey effort). Sea state 5 (moderate waves, many whitecaps) and 6 (large waves and white foam crests) occurred rarely (8% and 1% of survey effort), and 1% of the survey effort lacked sea state data.

Glare conditions were generally favourable during surveys in 2022; however, one fifth (16%) of the 2022 marine mammal surveys proceeded with bright glare (Figure 3.2-2c). Glare was recorded as none and slight/grey 42% and 33% of the time respectively, and glare data is absent for 9% of the survey effort.

3.2.2 Marine Mammal Observations 2022

Marine mammals were observed during dedicated surveys and incidentally in 2022. Survey results, incidental sightings, and species descriptions are provided in the following sections.

3.2.2.1 Marine Mammal Observations during Surveys, 2022

During dedicated marine mammal surveys, there was a total of 19 separate sightings of marine mammals (102 animals) by Groupe Desgagnés and Woodward during the MMSO Program in 2022. Three species of marine mammals and two unknown species were recorded during these surveys (Table 3.2-2; Figure 3.2-3). Species observed included Atlantic walrus (*Odobenus rosmarus rosmarus*), bearded seal (*Erignathus barbatus*), and fin whale (*Balaenoptera physalus*). In addition, there were 12 separate sightings of seals that were not identified to species, as well as a sighting of an unknown cetacean species that was observed “spraying”. This sighting has been categorized as an unknown whale species, as it was observed within Hudson Bay and is therefore unlikely to have been a dolphin.

The majority (89%) of sightings occurred in July (nine sightings) and August (eight sightings), and the most commonly observed species were unidentified seal species (11 separate sightings totalling 15 individuals) observed in July and August, and bearded seals (four separate sightings totalling 82 individuals) observed in July and August.

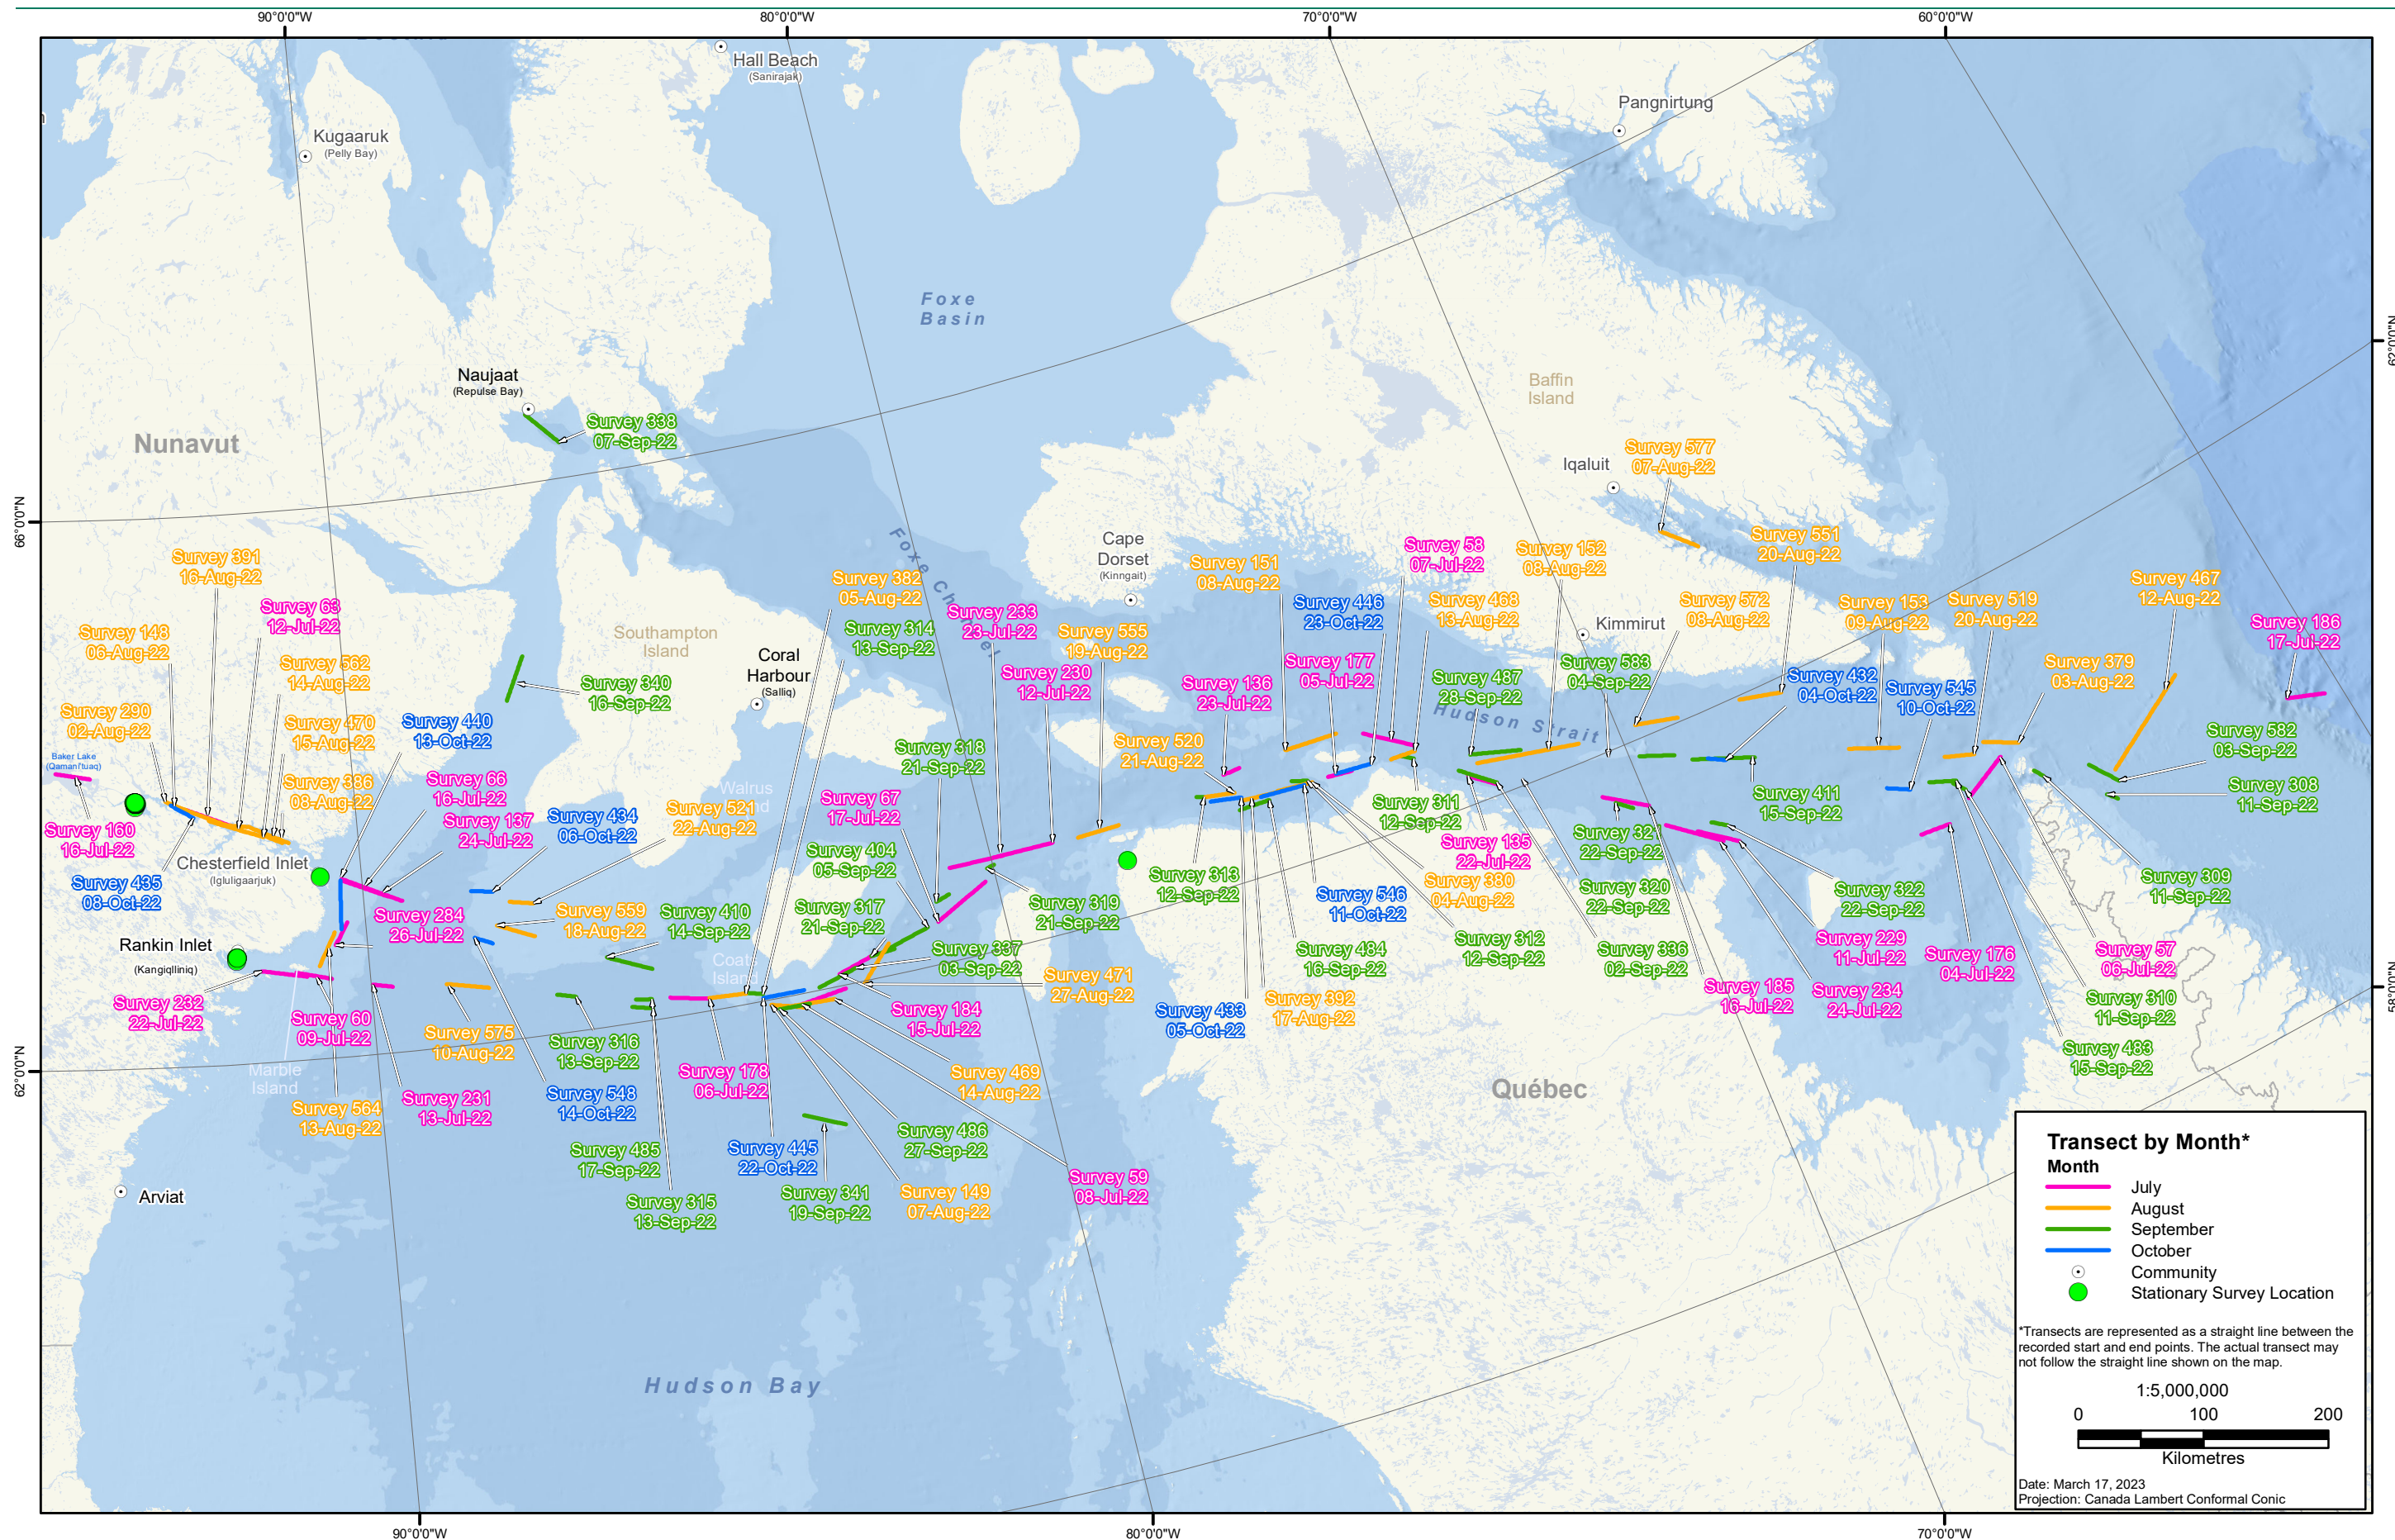

Figure 3.2-1: Marine Mammal Survey Transects, July to October, 2022

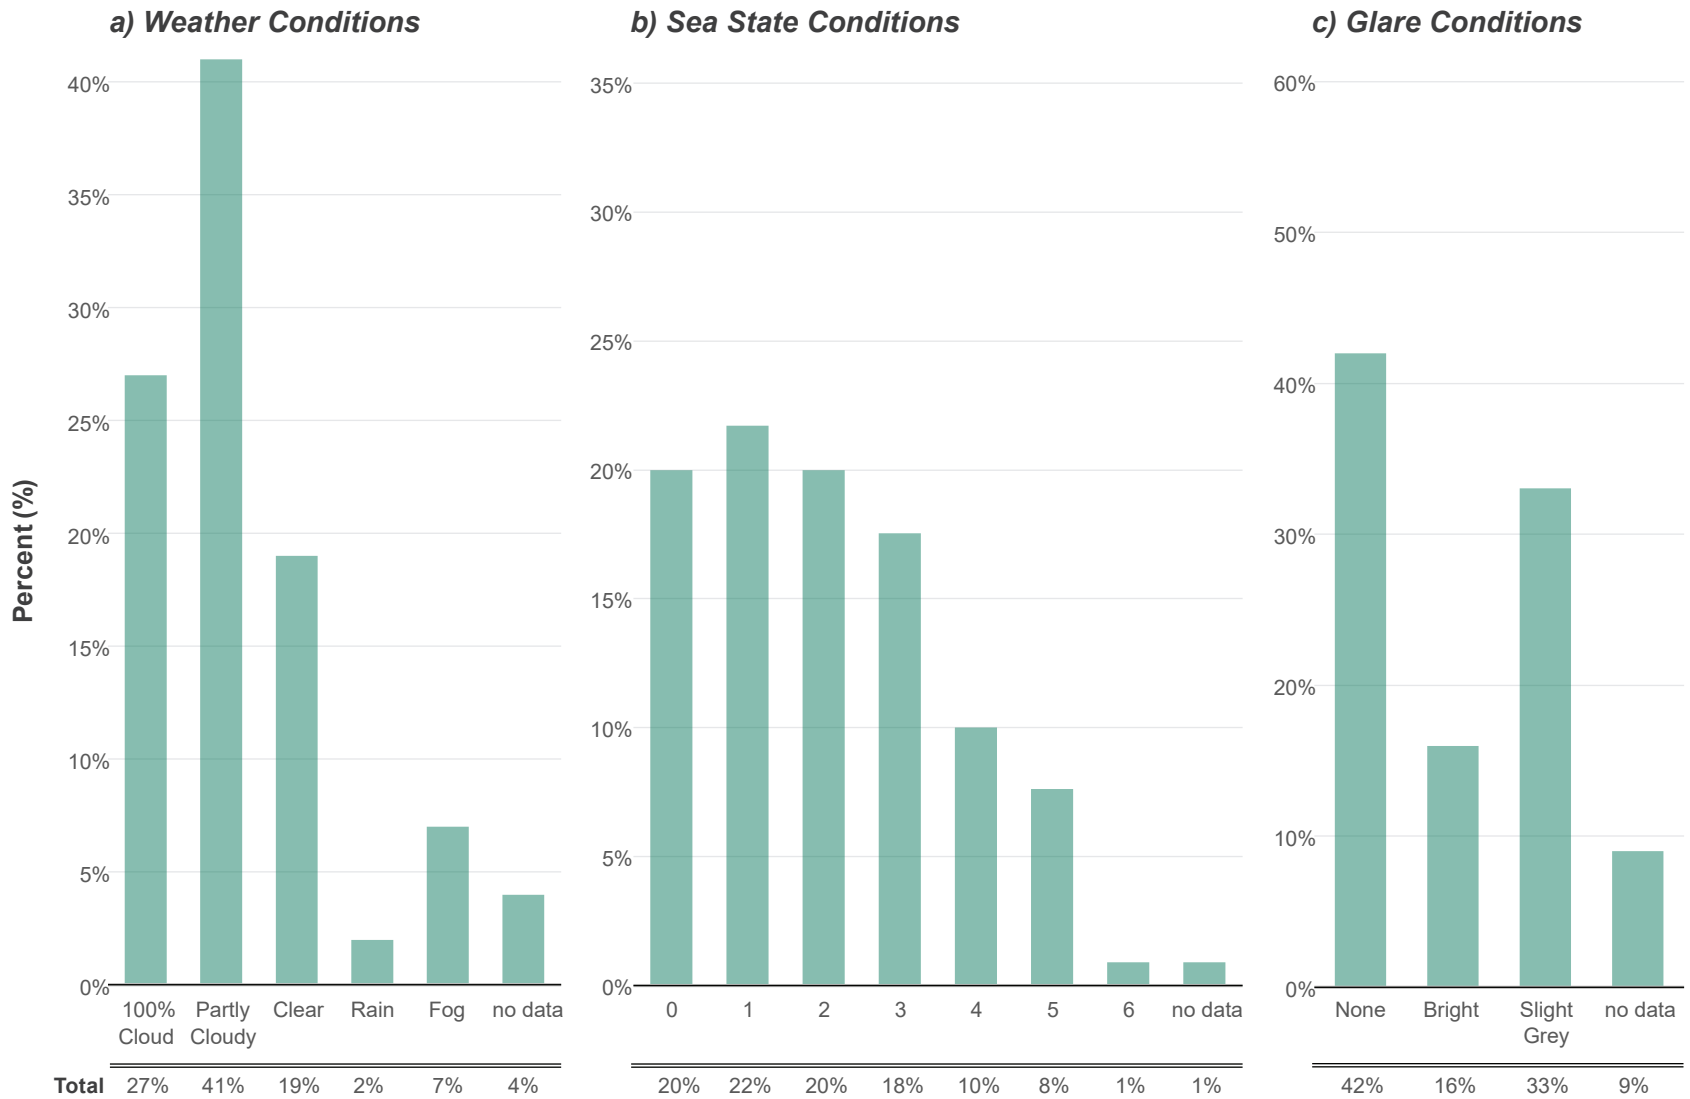

Figure 3.2-2: Percent Weather, Sea State, and Glare Conditions During Marine Mammal Surveys Conducted in 2022

Table 3.2-2: Marine Mammal Observations during Surveys, July to September 2022

Month	Species Observed	Number of Sightings	Number of Animals Observed
July	Unknown Seal	7	7
	Bearded Seal	2	80
August	Unknown Seal	4	8
	Bearded Seal	2	2
	Atlantic Walrus	1	1
	Unknown Whale	1	1
September	Fin Whale	1	2
	Unknown Seal	1	1
Total		19	102

3.2.2.2 Marine Mammals Observed Incidentally, 2022

Incidental observations of marine mammals are sightings of animals while on the vessel, but outside of the dedicated MMSO survey time (i.e., “off-effort” sightings). There were 13 incidental observations (59 animals) during 2022 (Table 3.2-3; Figure 3.2-4). Five species were observed incidentally including polar bear (*Ursus maritimus*), Atlantic walrus, harbour seal (*Phoca vitulina*), grey seal (*Halichoerus grypus*), and pilot whale (*Globicephala melas*). In addition, unknown seal species were observed on three separate occasions. Marine mammals were observed incidentally between July and September, 2022.

Table 3.2-3: Incidental Observations of Marine Mammals, July to September 2022

Month	Species Observed	Number of Sightings	Number of Animals Observed
July	Atlantic Walrus	2	7
	Polar Bear ¹	1	1
	Harbour Seal	2	2
	Unknown Seal	3	21
August	Grey Seal	1	22
	Pilot Whale ²	2	3
September	Harbour Seal	2	3
Total		13	59

¹ Species listed on Schedule 1 of the federal Species at Risk Act (SARA).

² Species was identified as “pilot whale” – in the north Atlantic, this would be long-finned pilot whale. This species has not been observed before and is unlikely to occur in the study area, and therefore could be a misidentified species. However, recent studies show long-finned pilot whale sightings in Baffin Bay.

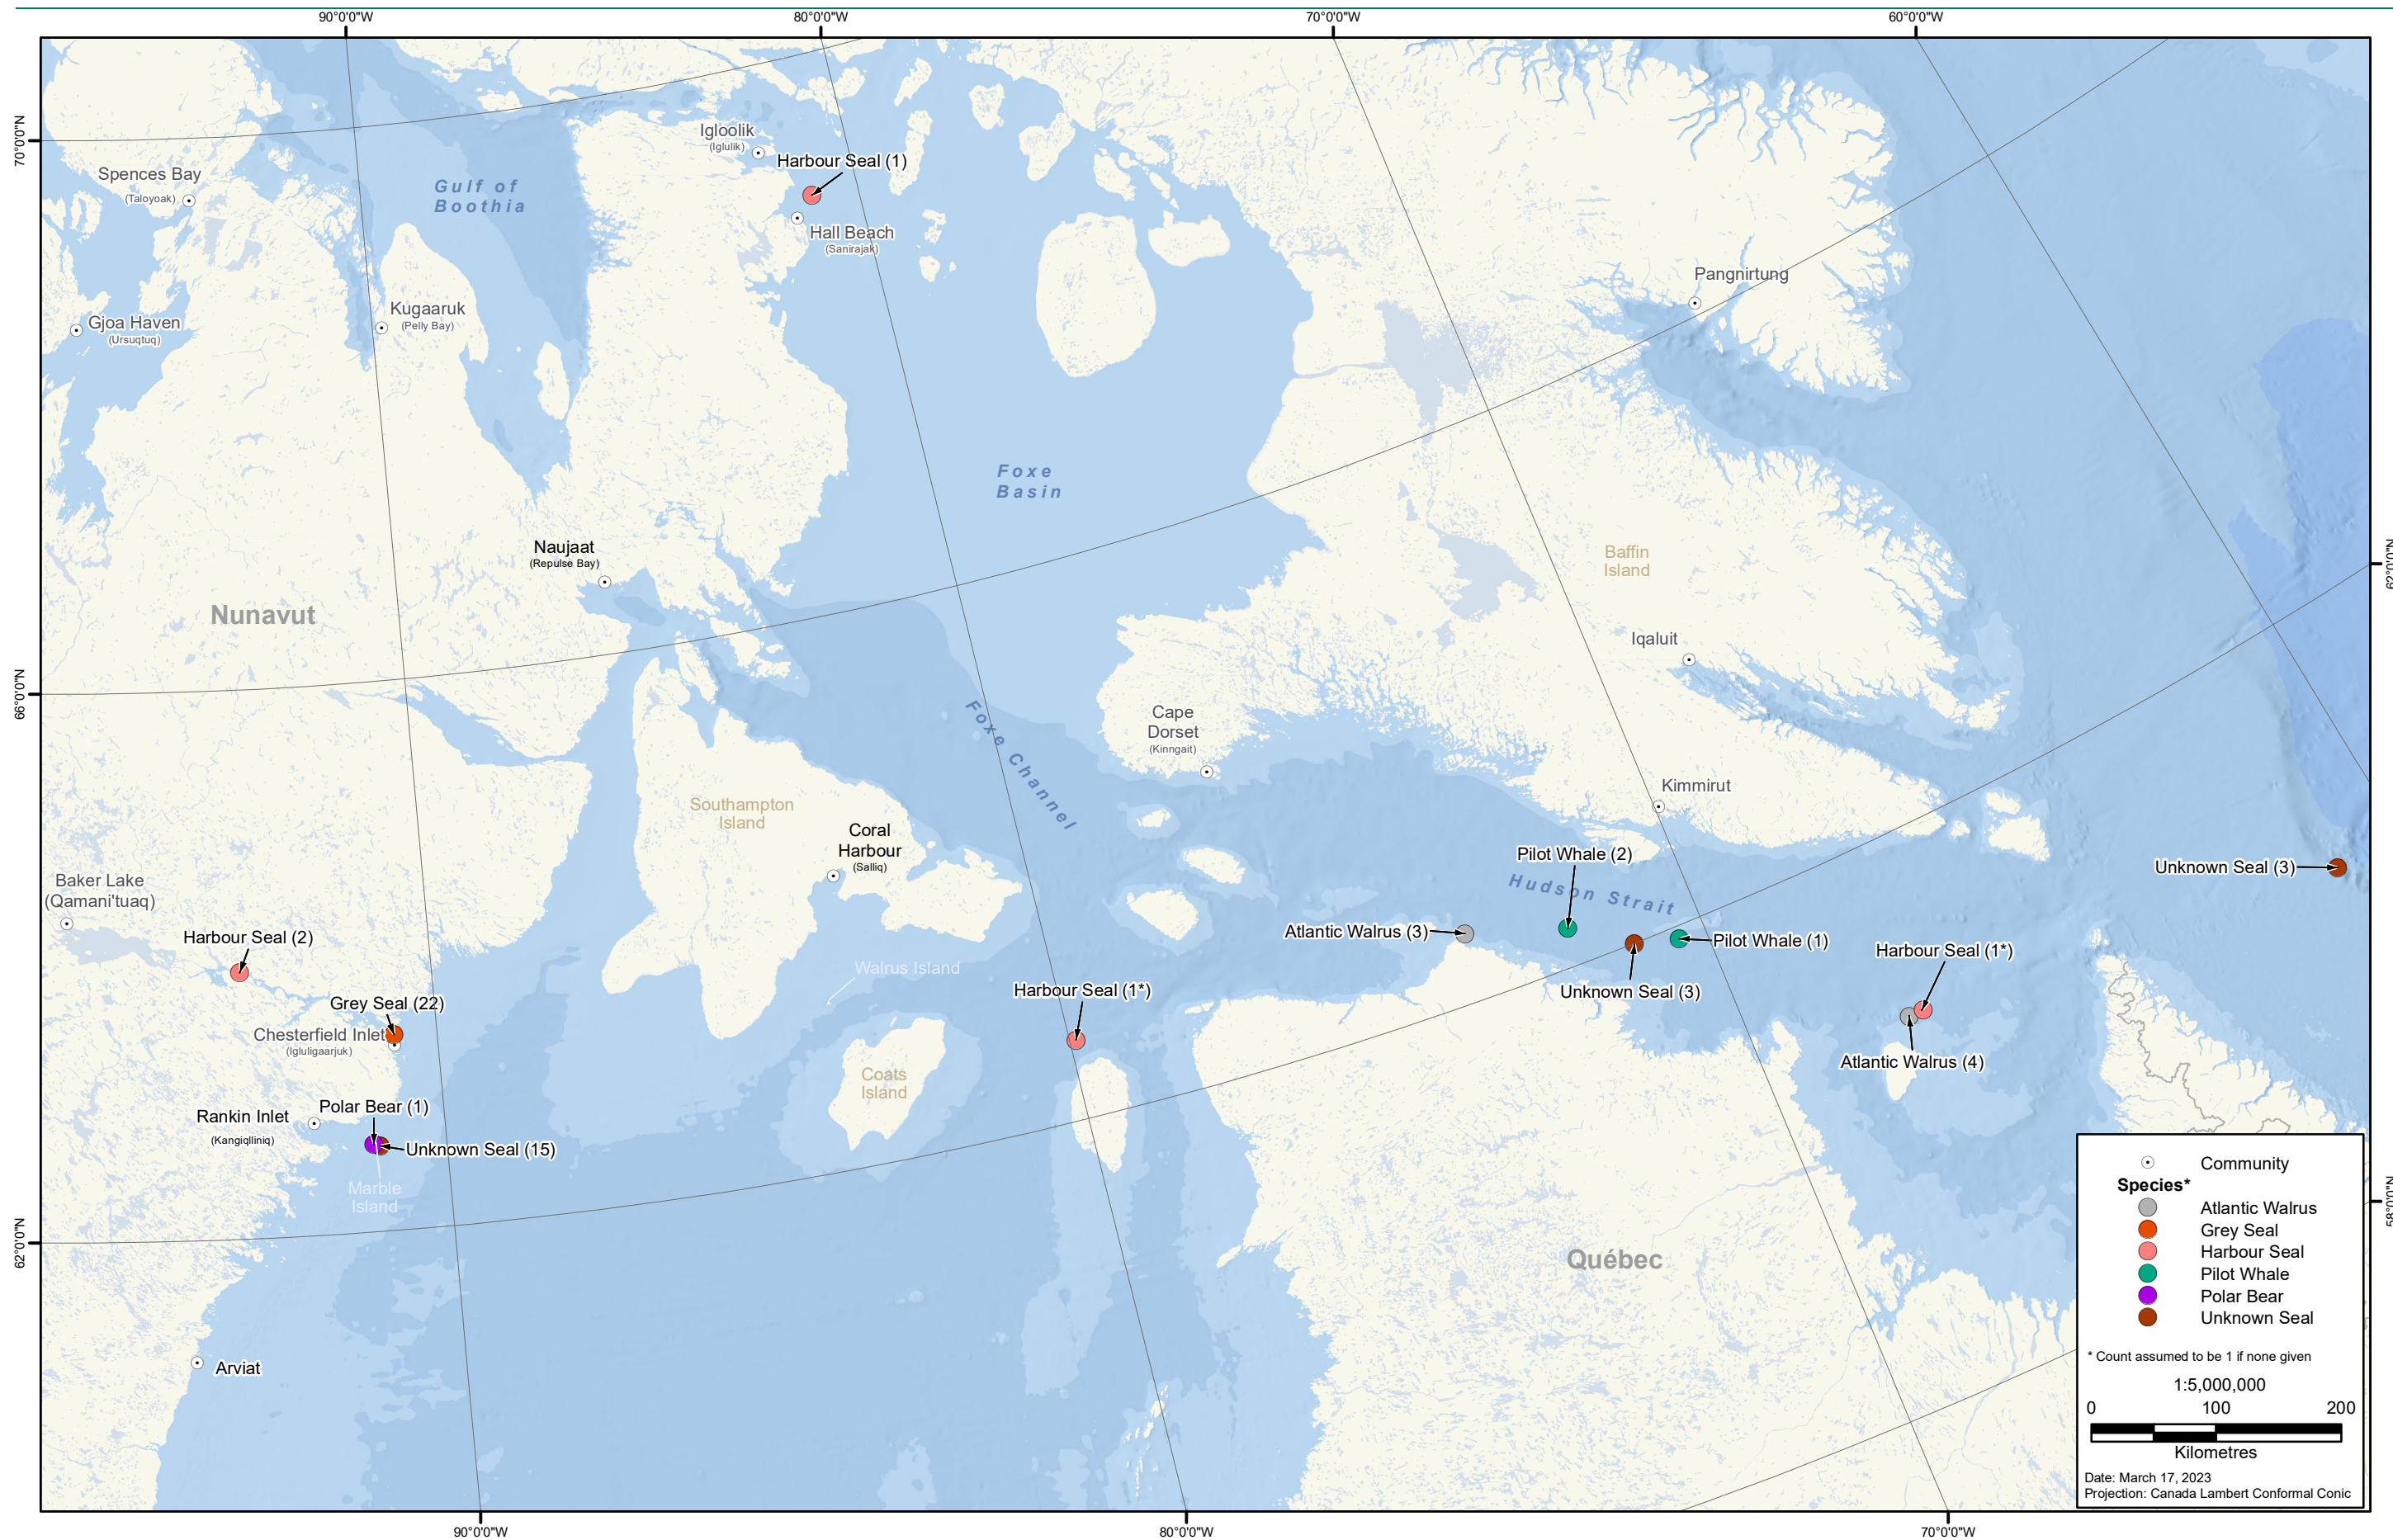

Figure 3.2-4: Incidental Observations of Marine Mammals, July to September 2022

3.2.2.3 Species Observed in 2022

A summary of the marine mammal sightings by the MMSOs in 2022 is provided in the following sections.

Polar Bears

One polar bear was observed incidentally (i.e., off-effort) on July 24, 2022. The animal was observed in the water swimming approximately 100 m from the vessel near Marble Island (Figure 3.2-4). As per the *Shipping Management Plans* (Agnico Eagle 2022a and 2022b), the vessel altered its course to increase the distance between the vessel and the polar bear. As a result, the vessel passed the polar bear approximately 200 m away (Section 3.1.3). Polar bears are listed as Special Concern on Schedule 1 of the federal *Species at Risk Act* (SARA).

Long-finned Pilot Whale

Two separate sightings of pilot whales (one group of two animals, one individual) were recorded on August 28, 2022. Both sightings were incidental observations. The first sighting occurred at 12:30pm, approximately 750 m from the vessel. Two animals were observed swimming in Hudson Strait. The second sighting occurred on the same day at 15:55, approximately 200 m from the vessel (Figure 3.2-3). This sighting was of a single animal swimming in Hudson Strait, approximately 90 km from the first sighting. This could have been a resighting of the same whale, given the proximity of the two sightings and the speed at which pilot whales can travel (approximately 35 km/hr).

Long-finned pilot whales are common in the north Atlantic, however are a rare sighting in the Arctic. This is the first time they have been recorded during MMSO surveys or incidentally for the Project. In the last 10 years, long-finned pilot whales have been recorded in Arctic waters. In 2012 and 2013, long-finned pilot whales were observed between July and October during surveys around Baffin Bay and Melville Bay (Froun-Mouy et al. 2017) and around Iceland between 2014 and 2020 (Selbmann et al. 2022).

Fin Whale

One group of two fin whales was reported on one occasion during dedicated marine mammal surveys on September 16, 2022, in Hudson Strait approximately 200 m from the vessel. Fin whales have a wide-ranging distribution in the north Atlantic up to Davis Strait. A fin whale was also recorded during MMSO surveys in 2019 and in 2021 in the eastern Hudson Strait at a similar location. Fin whales are listed as Special Concern on Schedule 1 of the federal *Species at Risk Act* (SARA).

Seals

A total of 24 separate sightings of seals were recorded in 2022: 16 separate occasions during dedicated marine mammal surveys (Figure 3.2-3) and eight separate incidental sightings (Figure 3.2-4). During dedicated surveys, bearded seals were observed on four occasions (total of 82 individuals), and there were 12 separate sightings of unknown seal species (16 individuals). Two large groups of bearded seals (50 animals and 30 animals) were observed in July near Chesterfield Inlet on July 16. It is possible that some of these animals were re-sightings, as the group of 30 animals was recorded approximately 16 km away from the first group two hours later, as bearded seals are capable of swimming 35 km/hr. Seals were most commonly observed in July (nine separate sightings of 87 individuals) but were observed between July and September (Table 3.2-2).

Seals were observed incidentally (i.e., off-effort) on an additional eight occasions in 2022 (Figure 3.2-4). Three separate sightings of unknown seal species occurred in July (21 individuals), four sightings of harbour seals, including two sightings in July (two animals) and two sightings in September (three animals), and one sighting of a group of 22 grey seals in August (Figure 3.2-4; Table 3.2-3).

One sighting of a seal was recorded as the animal being less than 100 m from the vessel. This was a sighting on July 17 of a seal species swimming in the water 50 m from the vessel. The seal was observed in the water and the vessel continued to travel without changing course. As a result, the seal continued to swim without responding to the vessel and no additional mitigation was required.

Atlantic Walrus

A total of three separate sightings of Atlantic walrus were recorded in 2022. One Atlantic walrus was observed during dedicated MMSO surveys on August 20, 2022, on the ice south of Saddleback Island near the northern coastline of Hudson Strait (Figure 3.2-3). No additional information regarding this sighting was recorded. Two additional walrus groups were observed incidentally (i.e., off-effort) in 2022: one group of three individuals was observed swimming very close to each other in Hudson Strait east of Charles Island on July 5, and one group of four individuals was observed resting on ice north of Akpatok Island in Hudson Strait on July 13. The group of three individuals observed swimming on July 5 was observed 30 m from the vessel. The vessel did not change course to ensure the walrus were not disturbed by the vessel, and as a result, the walrus continued to swim by the vessel.

3.2.3 Marine Mammal Observations 2017 to 2022

Marine mammals have been observed during surveys and incidentally between 2017 and 2022 (Figures 3.2-5 and 3.2-6). A total of seven different species were identified along the shipping route in 2022, and an additional two unknown species (unknown whale species and unknown seal species). This is a similar number to previous years. In 2021, 13 species were identified, in 2020 and 2019 five species were recorded, and there were no recorded observations of marine mammals during surveys in 2018 or 2017; however, marine mammals were observed incidentally (off-effort) in 2017 (Table 3.2-4). Since 2017, the number of marine mammal individuals observed has increased (Figure 3.2-7), while the diversity of species (i.e., number of different species observed) has fluctuated (Figure 3.2-7), with the highest diversity observed in 2021 (13 species, excluding unknowns) and 2022 (seven species, excluding unknowns).

Species observed in previous years are summarized in Table 3.2-4. Sightings during 2021 included white-beaked dolphin, white-sided dolphin, blue whale, minke whale, beluga whale, fin whale, killer whale, walrus, polar bears and seals. Sightings during surveys in 2020 included white-beaked dolphins, walrus, polar bears, and seals. Sightings during surveys in 2019 included bowhead whale (*Balaena mysticetus*; one sighting of three to four individuals), fin whale (one sighting of one individual), harp seal (one sighting of four individuals), killer whale (three sightings totaling eight individuals), and polar bear (one sighting of one individual; Table 3.2-4). All sightings of whales in 2019 were within Hudson Strait (Figure 3.2-5). No unidentified marine mammals were recorded during the 2019 MMSO program.

In 2017, marine mammals were only observed incidentally (i.e., off-effort), and no marine mammals were observed during dedicated surveys. The marine mammals observed incidentally in 2017 included walrus (three sightings of three, two, and one individual), harp seal (one sighting of one individual), and unidentified seal species (two sightings of one individual each; Table 3.2-4). The walrus were observed near Marble Island and near Charles Island in Hudson Strait (Figure 3.2-6).

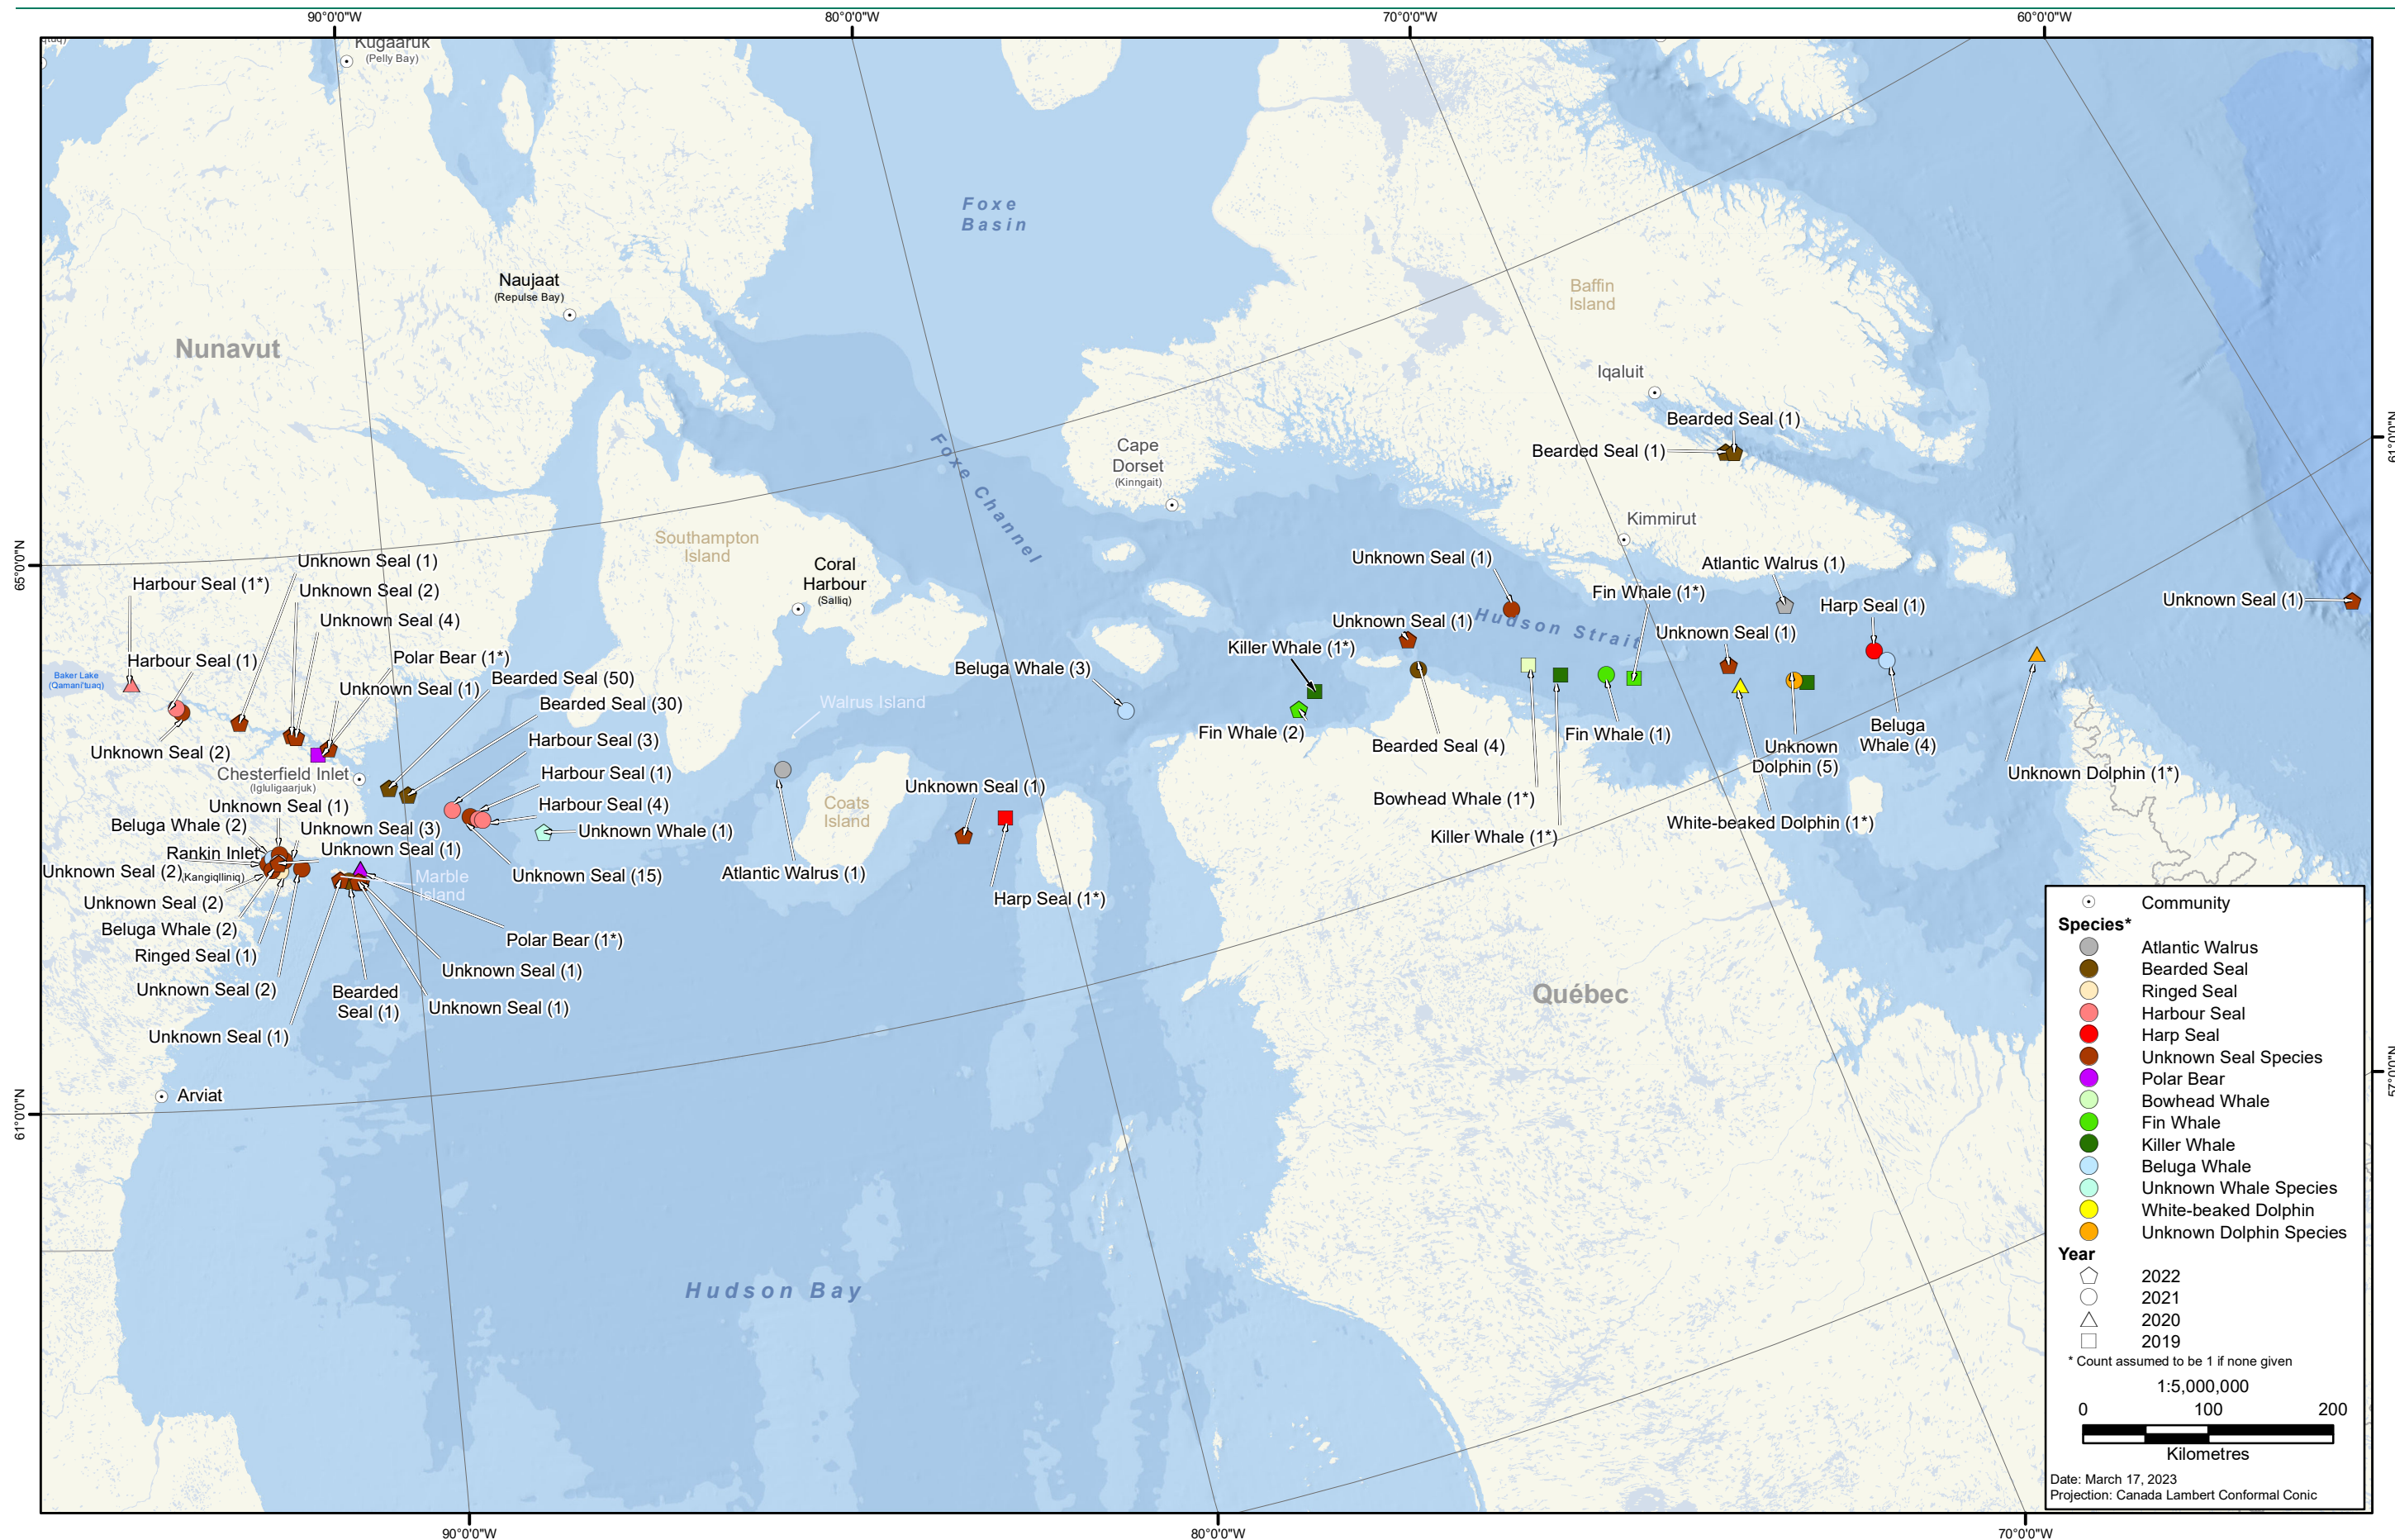

Figure 3.2-5: Marine Mammals Observed during MMSO Surveys, 2019 to 2022

Table 3.2-4: Number¹ of Marine Mammals Observed during Surveys and Incidentally² between 2017 and 2022³

Species	2017	2019	2020	2021	2022	Total
Bowhead whale	-	3	-	-	-	3
Fin whale ⁴	-	1	-	1	2	4
Killer whale	-	8	-	6	-	14
White-beaked dolphin	-	-	15	12	-	27
Unknown dolphin species	-	-	15	5	-	20
Harp seal	-	4	-	2	-	6
Harbour seal	-	-	1	9	5	15
Ringed seal	1	-	-	1	-	2
Unknown seal	2	-	4	29	37	72
Atlantic Walrus	6	-	4	10	8	28
Polar bear ⁴	-	1	8	3	1	13
Blue whale ^{4,5}	-	-	-	2	-	2
Minke whale	-	-	-	1	-	1
White-sided dolphin	-	-	-	24	-	24
Long-finned Pilot Whale	-	-	-	-	3	3
Beluga whale	-	-	-	11	-	11
Unknown Whale	-	-	-	-	1	1
Grey Seal	-	-	-	-	22	22
Bearded seal	-	-	-	6	82	88
Total	9	17	47	122	161	356

¹ Numbers are given as individuals observed not number of separate sightings.

² Marine mammals observed both during dedicated surveys and off-effort are included in the table. Note that all sightings in 2017 were incidental, in 2019 were during dedicated surveys, and during 2020 through 2022 were both during surveys and incidental.

³ No sightings were recorded in 2018.

⁴ Species listed on Schedule 1 of the federal Species at Risk Act (SARA).

⁵ It is possible that the blue whale sighting was not identified properly while on the vessel, as it would be a rare occurrence for a blue whale to be recorded in Hudson Bay.

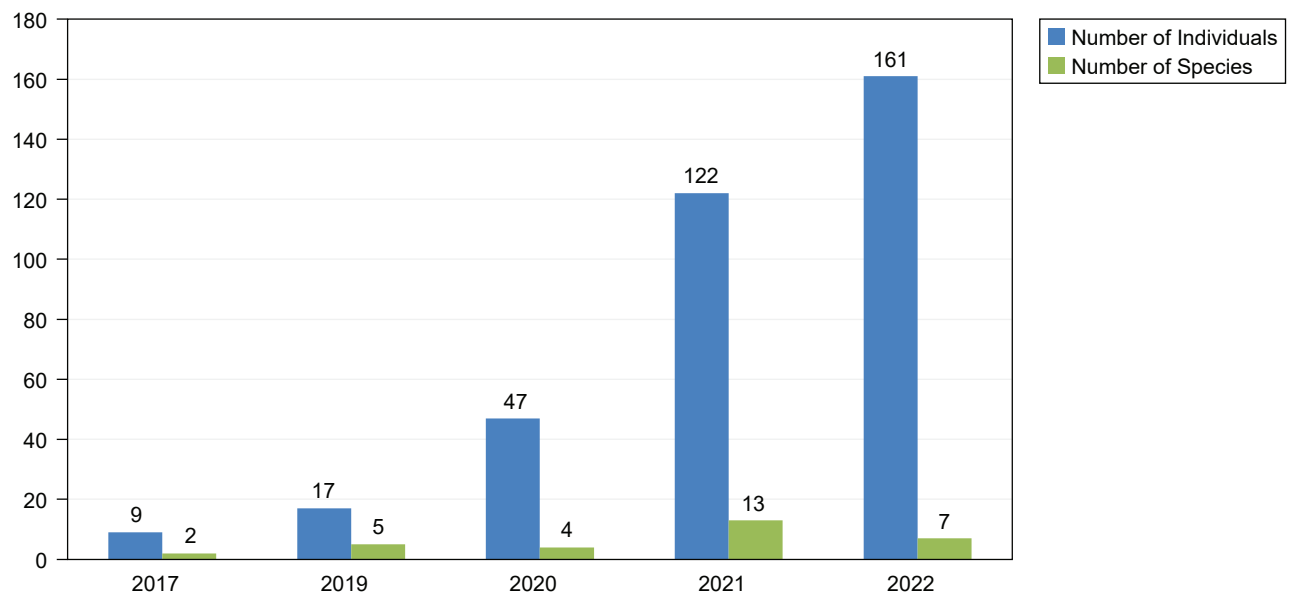

Figure 3.2-7: Number of Marine Mammal Individuals and Number of Species Observed, 2017 to 2022

3.3 Seabird Observations

3.3.1 Survey Effort

Seabird surveys have been conducted since 2018. Surveys were conducted in 2022 by dedicated MMSOs between Hudson Straight and Rankin Inlet/Helicopter Island between July 4 and November 10 on board various Groupe Desgagnés and Woodward vessels. In 2022, 163 transects with known distance effort were surveyed while the vessel was moving, with 10,423 km of seabird survey distance recorded over 98 hours (Table 3.3-1; Figure 3.3-1). An additional 19 hours of stationary surveys were conducted while the vessel was anchored (Table 3.3-2).

Some surveys did not have effort recorded; surveys without spatial effort did not have location coordinates recorded at the start and/or end of the surveys, while surveys without temporal effort did not have the start and/or end times recorded. Surveys without spatial effort were not used for analysis (Table 3.3-1). Appendix E summarizes all seabird surveys and Appendix F summarizes all seabird sightings.

Spatial effort for moving surveys increased with each survey year, with 2022 having the highest spatial effort (Table 3.3-1). Spatial effort in 2022 was nearly one and a half times the effort of 2021, and more than triple the effort of earlier years of surveying (Table 3.3-1). Contrary to spatial effort, 2022 had the lowest temporal effort for moving surveys. The change in temporal effort is likely attributed to the change in survey methods in 2022, which involved successful implementation of six short consecutive survey periods opposed to one long survey period. Additionally, low temporal effort may be due to vessels moving faster, covering more distance during a survey.

Stationary vessel surveys were conducted in similar numbers as recent years, however 70% of surveys did not have a time recorded (105 surveys with no effort; Table 3.3-2). The number of stationary vessel surveys with effort in 2022 were roughly 60% lower than 2020 and 2021 (Table 3.3-2).

3.3.1.1 Environmental Variables and Weather Conditions during Surveys

Key environmental variables that have the potential to impact seabird detection were plotted for visual assessments of trends in detection (Figure 3.3-2). Detections varied across weather conditions and years without clear trends in most cases; this indicates that detectability was not greatly affected by variable weather conditions. Detections appear lower in some severe adverse weather, including snow, gale force winds, and very rough sea states (Figure 3.3-2). However, there were relatively few surveys conducted in these adverse conditions, making trends difficult to determine; these observations only represent a handful of the thousands of detections recorded across all years of surveys, so it is unlikely that the overall detection estimates are impacted by weather variables. Models were created without covariates like weather variables due to low sample sizes restricting model fit. However, visual assessment indicates this omission is not likely impacting model results.

3.3.2 Moving Vessel Seabird Observations 2018 to 2022

Analyses included only on-transect sightings and did not use re-sightings of the same birds. Table 3.3-3 summarizes samples sizes for surveys, detections (groups) and individuals (total number of birds). The average number of detections and the average number of individuals per detection varies across years and survey type (stationary/ moving). The number of seabird detections during moving vessel surveys was highest in 2022 compared to other years ($n = 535$; Table 3.3-3). However, the average number of individuals per detection in 2022 was 60% lower than 2019 through 2021, but comparable to detections in 2018. This indicates that seabirds were recorded in much smaller group sizes in 2022.

Table 3.3-1: Temporal and Spatial Effort for Moving Vessel Seabird Surveys, 2018 to 2022

Year	Temporal Effort			Spatial Effort		
	Effort (hr)	No. of Transects with Effort	No. of Transects with No Effort ¹	Effort (km)	No. of Transects with Effort	No. of Transects with No Effort ²
2018	139.87	72	7	407.1	33	46
2019	119.85	87	4	2,290.8	79	12
2020	111.88	84	14	3,614.8	79	20
2021	173.87	173	24	7,176.7	170	27
2022	98.47	182	46	10,423.3	163	65

¹ Surveys without distance effort did not have location coordinates recorded at the start and/or end of the surveys.

² Surveys without temporal effort did not have the start and/or end times recorded.

Table 3.3-2: Temporal Effort for Stationary Seabird Surveys, 2018 to 2022

Year	Effort (hr)	No. of Points with Effort	No. of Points with No Effort ¹
2018	18.75	5*	0
2019	19.82	15	27
2020	152.00	104	40
2021	152.37	111	3
2022	19.65	41	105

* Surveys in 2018 did not include locations; therefore, these observations were not used in analysis.

¹ Surveys with No Effort did not have start and/or end times recorded.

Table 3.3-3: Seabird Survey Sample Sizes for Moving Vessel and Stationary Surveys, 2018 to 2022

Year	Moving Vessel Surveys				Stationary Vessel Surveys			
	Transects	Detections	Individuals	Avg. Indiv/ Detection	Points	Detections	Individuals	Avg. Indiv/ Detection
2018	33	150	574	3.82	5	0*	0*	-
2019	79	271	1,639	6.04	42	22	24	1.09
2020	79	116	683	5.89	144	103	536	5.20
2021	170	459	2,850	6.21	115	145	1,268	8.74
2022	163	535	2,006	3.75	142	131	764	5.83

* Locations were not given for 2018 stationary vessel data. Therefore, these observations were not used in analysis.

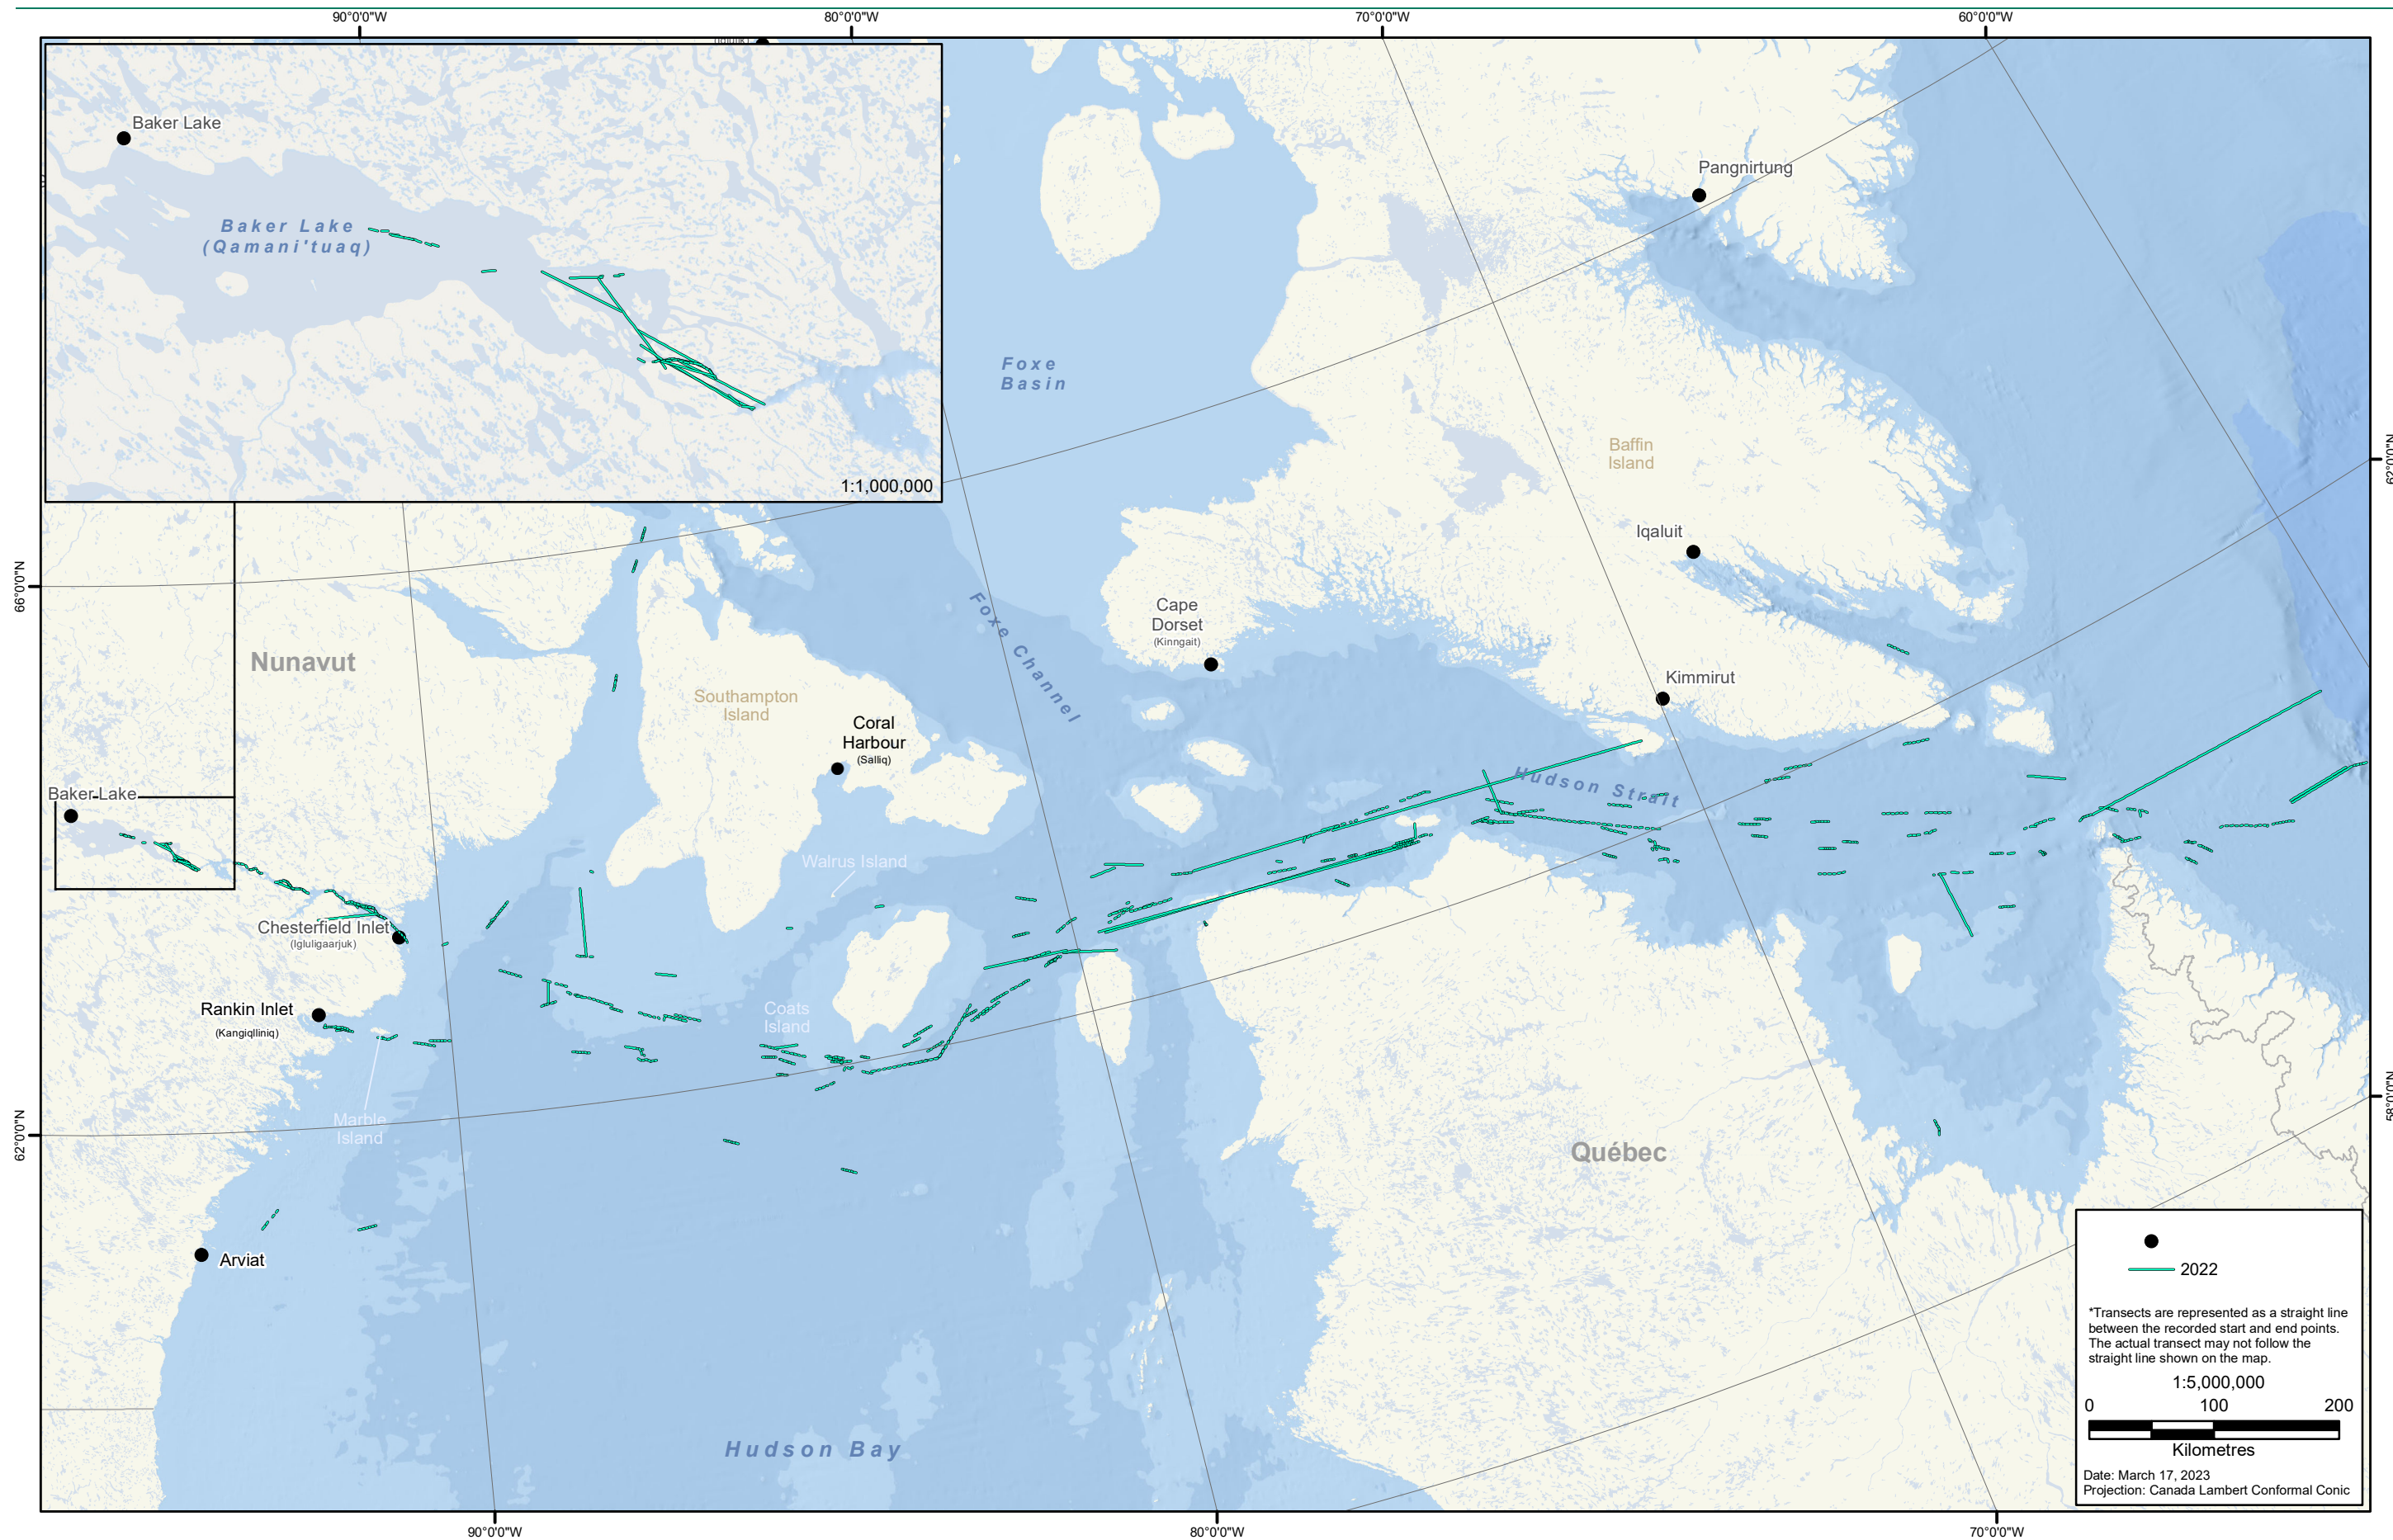

Figure 3.3-1: Moving Transect Seabird Survey Effort, 2022

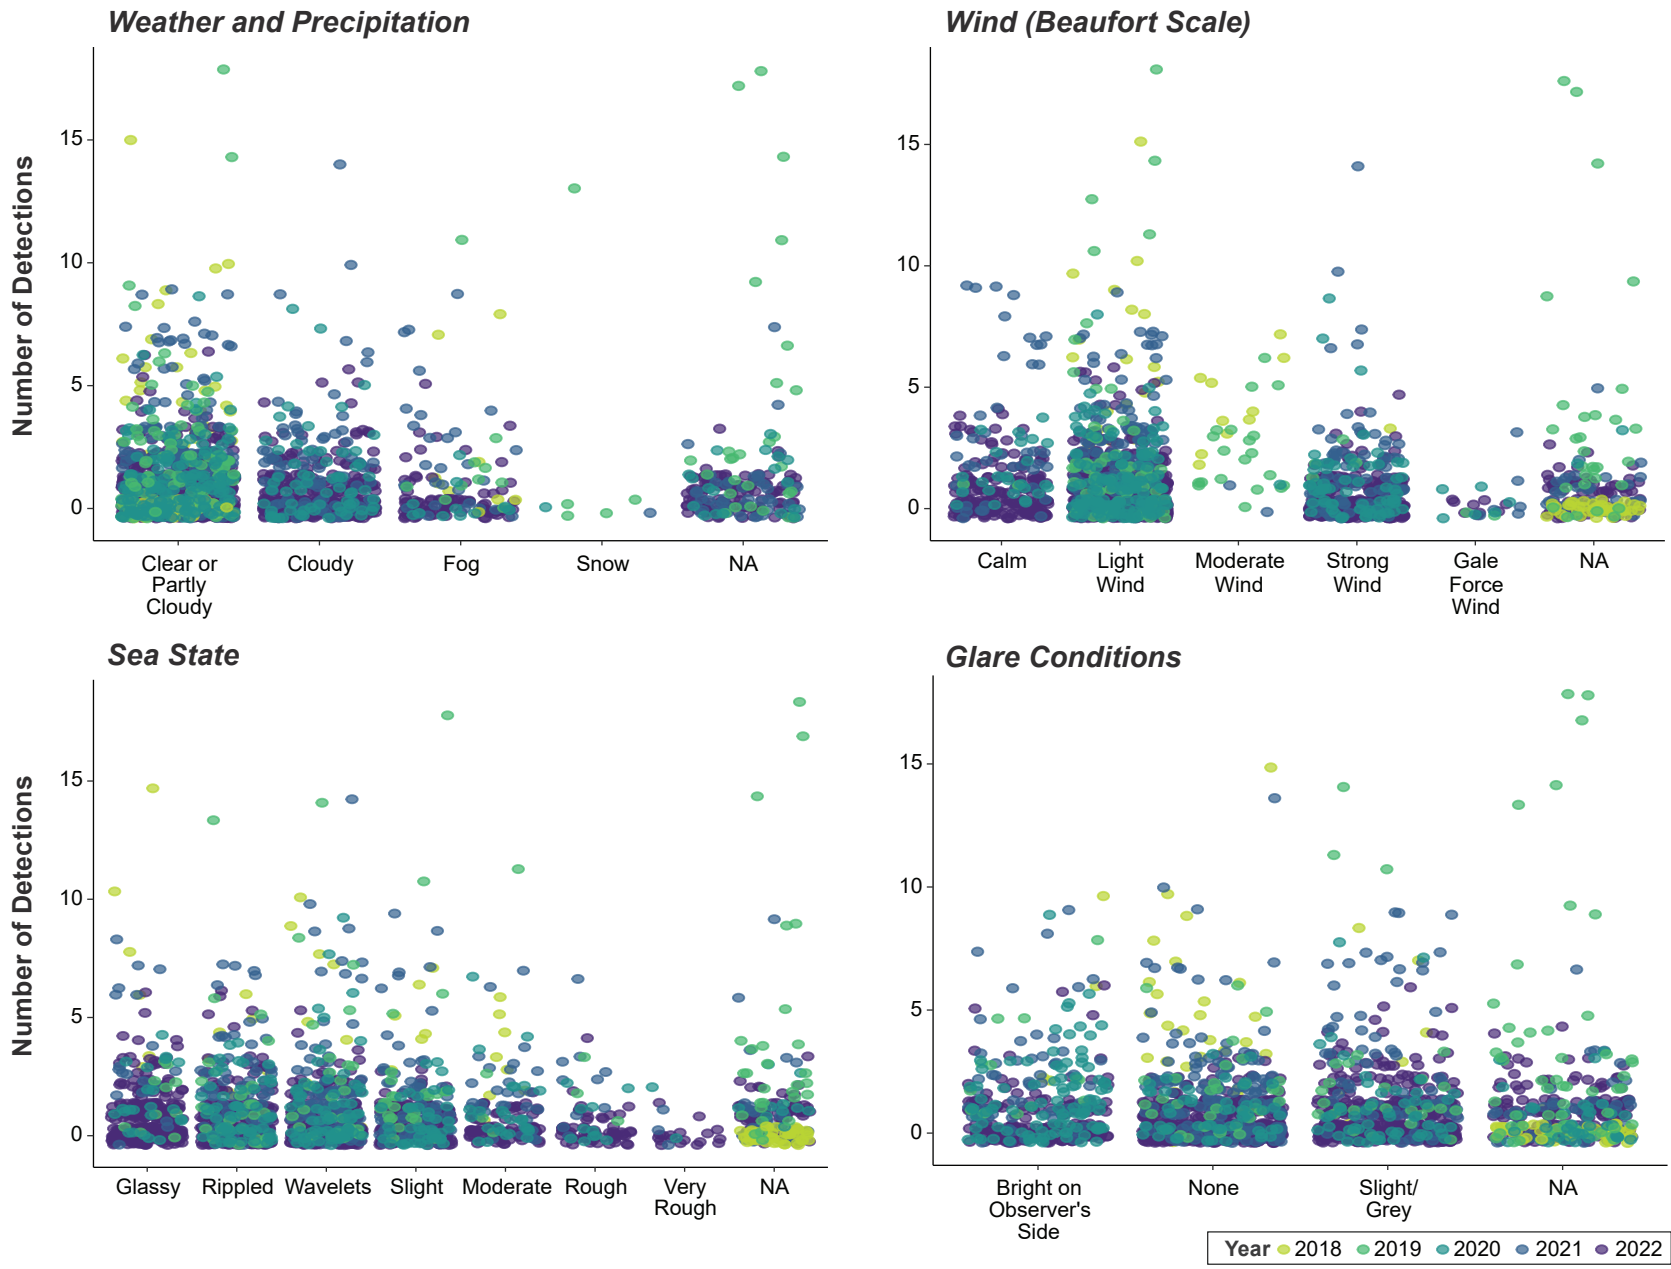

Figure 3.3-2: Weather Variables Summarized by Seabird Detections

3.3.2.1 Species Present

Compared to previous yearly sightings, the 2022 survey year had the second highest number of individuals birds recorded, with a total of 2,328 individual birds belonging to 27 known species and five unknown species (Table 3.3-4). Across all five years of surveys between 2018 and 2022, 8,624 individual birds belonging to 38 known species and nine unknown species have been recorded during moving vessel surveys (Table 3.3-4; Figure 3.3-3).

There were no new species recorded in 2022 during moving vessel surveys. The most common species recorded in 2022 were northern fulmar ($n = 678$), razorbill ($n = 235$), herring gull ($n = 178$), and common murre ($n = 161$). For the second year, common murre were reported in large numbers; while they can occur in the eastern portion of the shipping zone near Newfoundland, they are not common through the majority of the survey area. It is possible that identifications of common murre were actually thick-billed murre, which occur throughout the survey area. Across all years, thick-billed murre and northern fulmar are consistently among the most commonly recorded species. Potential mis-identifications of species which are out of range have occurred in previous years, but typically in low numbers, such as records of great cormorant and great shearwater (Table 3.3-4).

3.3.2.2 Distance Analysis: Seabird Detection and Density Estimates

Distance analysis was conducted for moving vessel surveys in each year between 2019 and 2022 and all years combined (2018 to 2022). No distance model was fit independently for 2018 due to a low number of surveys.

As described in the methods, seabird observations were analyzed using distance analysis, which accounts for the fact that animals are easier to see when they are closer to the observer. The first step in this analysis is to examine whether the detectability curve (the change in detectability with distance from observer) and the detection estimate (probability of detecting a bird within the 300 m survey area) is the same between years.

Model fitting was mostly consistent across years, indicating that the detectability curve was the same between years of the study (according to AIC rankings and detectability estimates; Appendix G). The best model fits in all years were hazard rate functions, which means that detection remains high at closer distances (i.e., birds are just as likely to be detected within 100 m of an observer) but drops off steeply as distance increases. Detectability estimates were also consistent between years, ranging from 0.337 in 2020 to 0.500 in 2022 (Table 3.3-5). A higher detection estimate indicates that seabirds are more likely to be seen and recorded, even if they are a greater distance away from the ship/observer. The detectability estimate itself is not a key result, but consistency in estimates indicates that data are similar across years. In 2022, the standard error of the detectability estimate was much higher (0.25 compared to 0.021-0.056 in other years; Appendix G). The higher standard error is likely due to the volume of survey intervals with no observations in 2022, given that data were split into five-minute survey windows rather than broader 30-minute surveys. A larger volume of short surveys with fewer observations per survey may have altered the variability in the survey data, which is reflected in the higher standard error estimate.

The second part of distance sampling is to estimate the density, in this case the density of seabirds, accounting for the lower detectability with greater distance. Predicted seabird densities varied across years, with the highest density predicted in 2019 (1.879 birds/ km²), which was nearly four times higher than the lowest predicted density in 2022 (0.473 birds/ km²; Table 3.3-5). The differences in estimated density are a reflection of variability in the effort and number of birds detected between years. The spatial effort of surveys in 2022 was higher than all previous years, but the number of seabirds recorded was similar to recent years (see Tables 3.3-1 and 3.3-3), which translates to a much lower estimated seabird density in 2022.

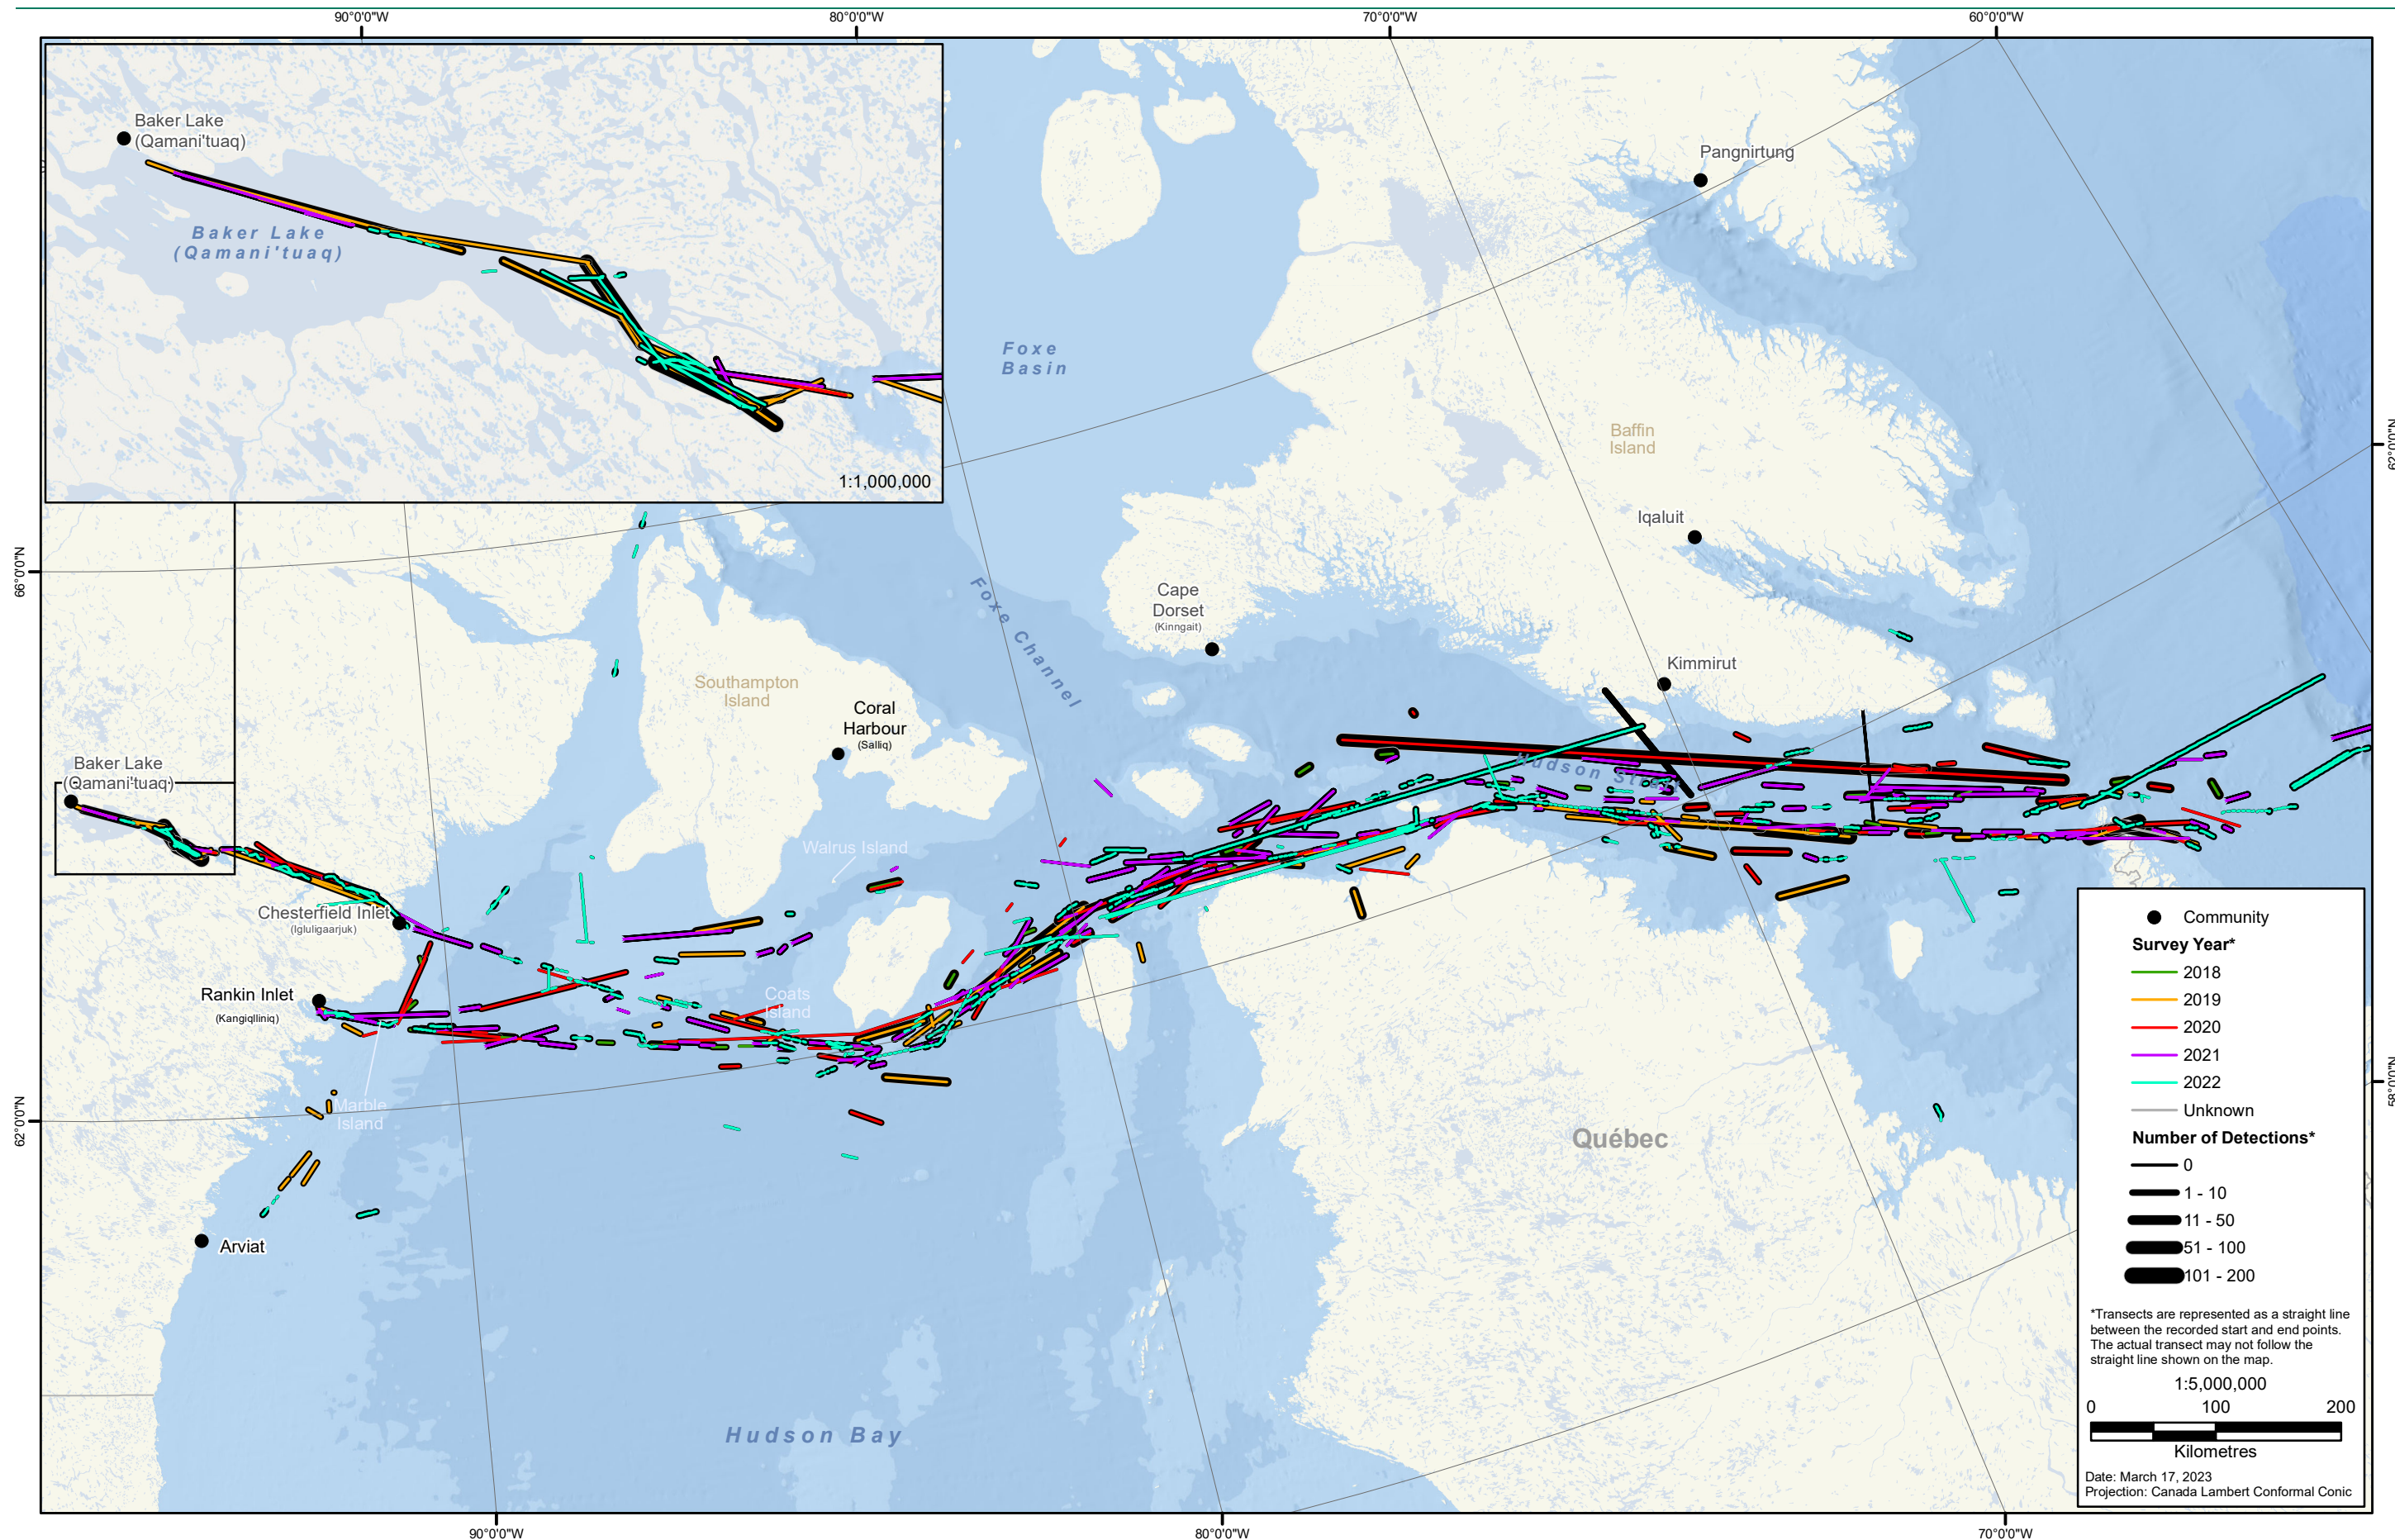

Figure 3.3-3: Seabird Detections during Moving Vessel Surveys, 2018 to 2022

Table 3.3-4: Bird Species Recorded during Moving Vessel Seabird Surveys, 2018 to 2022

¹ Species listed as Special Concern on Schedule 1 of the federal Species at Risk Act (SARA).

² Species listed as Endangered on Schedule 1 of the federal Species at Risk Act (SARA).

Table 3.3-5: Detection and Density Estimates by Year (2019 to 2022) during Moving Vessel Surveys

Year	Detection Estimate	Detections 95% CIs ¹	Density (birds/ km ²)	Density 95% CIs ¹
All Years	0.419	0.374 – 0.465	0.917	0.822 – 1.022
2019	0.426	0.316- 0.537	1.879	0.421- 3.170
2020	0.337	0.272- 0.402	0.701	0.421- 1.169
2021	0.425	0.385- 0.465	1.072	0.509- 2.261
2022	0.500	0.450 – 0.551	0.473	0.427 – 0.523

¹ Confidence Intervals (CIs). Values indicate the range in which 95% of samples fall.

Variability in the number of birds detected is driven by several elements, including random occurrence of large flocks (e.g., 100 to 200 birds), observer experience, local habitat variation near islands or channels, and time of day. These are differences in the number of birds encountered/recorded, rather than true differences in regional bird abundance. Therefore, the density estimate for all years of data together is likely the most accurate.

3.3.3 Stationary Vessel Seabird Observations 2019 to 2022

3.3.3.1 Species Present

A total of 2,592 individuals from 29 known species and eight unknown species were recorded during stationary vessel surveys from 2019 to 2022 (Table 3.3-6, Figure 3.3-4). Nearly 50% of records were from 2021 (n = 1,268 individuals), and the remaining records were almost all from 2022 (n = 764) and 2020 (n = 536). In 2022, several species were recorded for the first time during stationary surveys, including dovekie, long-tailed duck, and parasitic jaeger; however, all were species that have been previously recorded during the moving vessel surveys (Table 3.3-6). The most common species recorded in 2022 were unknown gull (n = 206), snow goose (n = 182), and cackling/Canada goose (n = 90; Table 3.3-6). Snow goose was also among the most common species recorded in 2020 and 2021. Geese are likely recorded more frequently in stationary vessel surveys because many of these occur near shores, opposed to moving vessel surveys which happen throughout the open water areas.

Table 3.3-6: Bird Species Recorded during Stationary Vessel Seabird Surveys, 2019 to 2022

Species	Scientific Name	2019	2020	2021	2022	Total
American Crow	<i>Corvus brachyrhynchos</i>	0	1	0	0	1

3.3.3.2 Distance Analysis: Seabird Detection Estimate

Stationary vessel surveys had lower sample sizes and, therefore, limited model fitting capabilities. Distance models were run for 2020, 2021, 2022 and for all years combined (2019 through 2022), though very little data were collected in 2019.

Only detection estimates were calculated for stationary vessel surveys. Density estimates could not be calculated because stationary effort requires repeated surveys at the same locations. While several of the stationary vessel surveys were conducted at anchor in Rankin Inlet, the sample size is currently too small for modelling. However, with additional sampling modelling for a density function may be possible in future years.

Detection estimates indicate the relative likelihood that a seabird will be detected within the survey area if it is there, taking into account the lower detectability when birds are farther away from the observer. A higher detection estimate indicates that seabirds are more likely to be seen and recorded, even if they are a greater distance away from the ship/observer.

The three key model selections were fit to estimate how quickly detectability changes with distance from the observer. Of the three model selection functions, hazard-rate models performed the best by AIC rating for all years of data combined (Table 3.3-7). However, the detection estimates for the top four AIC rated models were low (0.027 – 0.036; Table 3.3-7) with relatively high standard errors, making the detection estimates unpredictable and indicating poor model fit. Therefore, the half-normal model was selected as the most representative for all years of data because it indicated a reasonable detection estimate and standard error (Table 3.3-7). The half-normal model estimates that detection decreases gradually with greater distance from the observer. Although the model fitting was less consistent for the stationary vessel data compared to the moving vessel surveys, detection estimates for stationary vessel surveys were consistent between years, suggesting that results are likely reliable (Table 3.3-8).

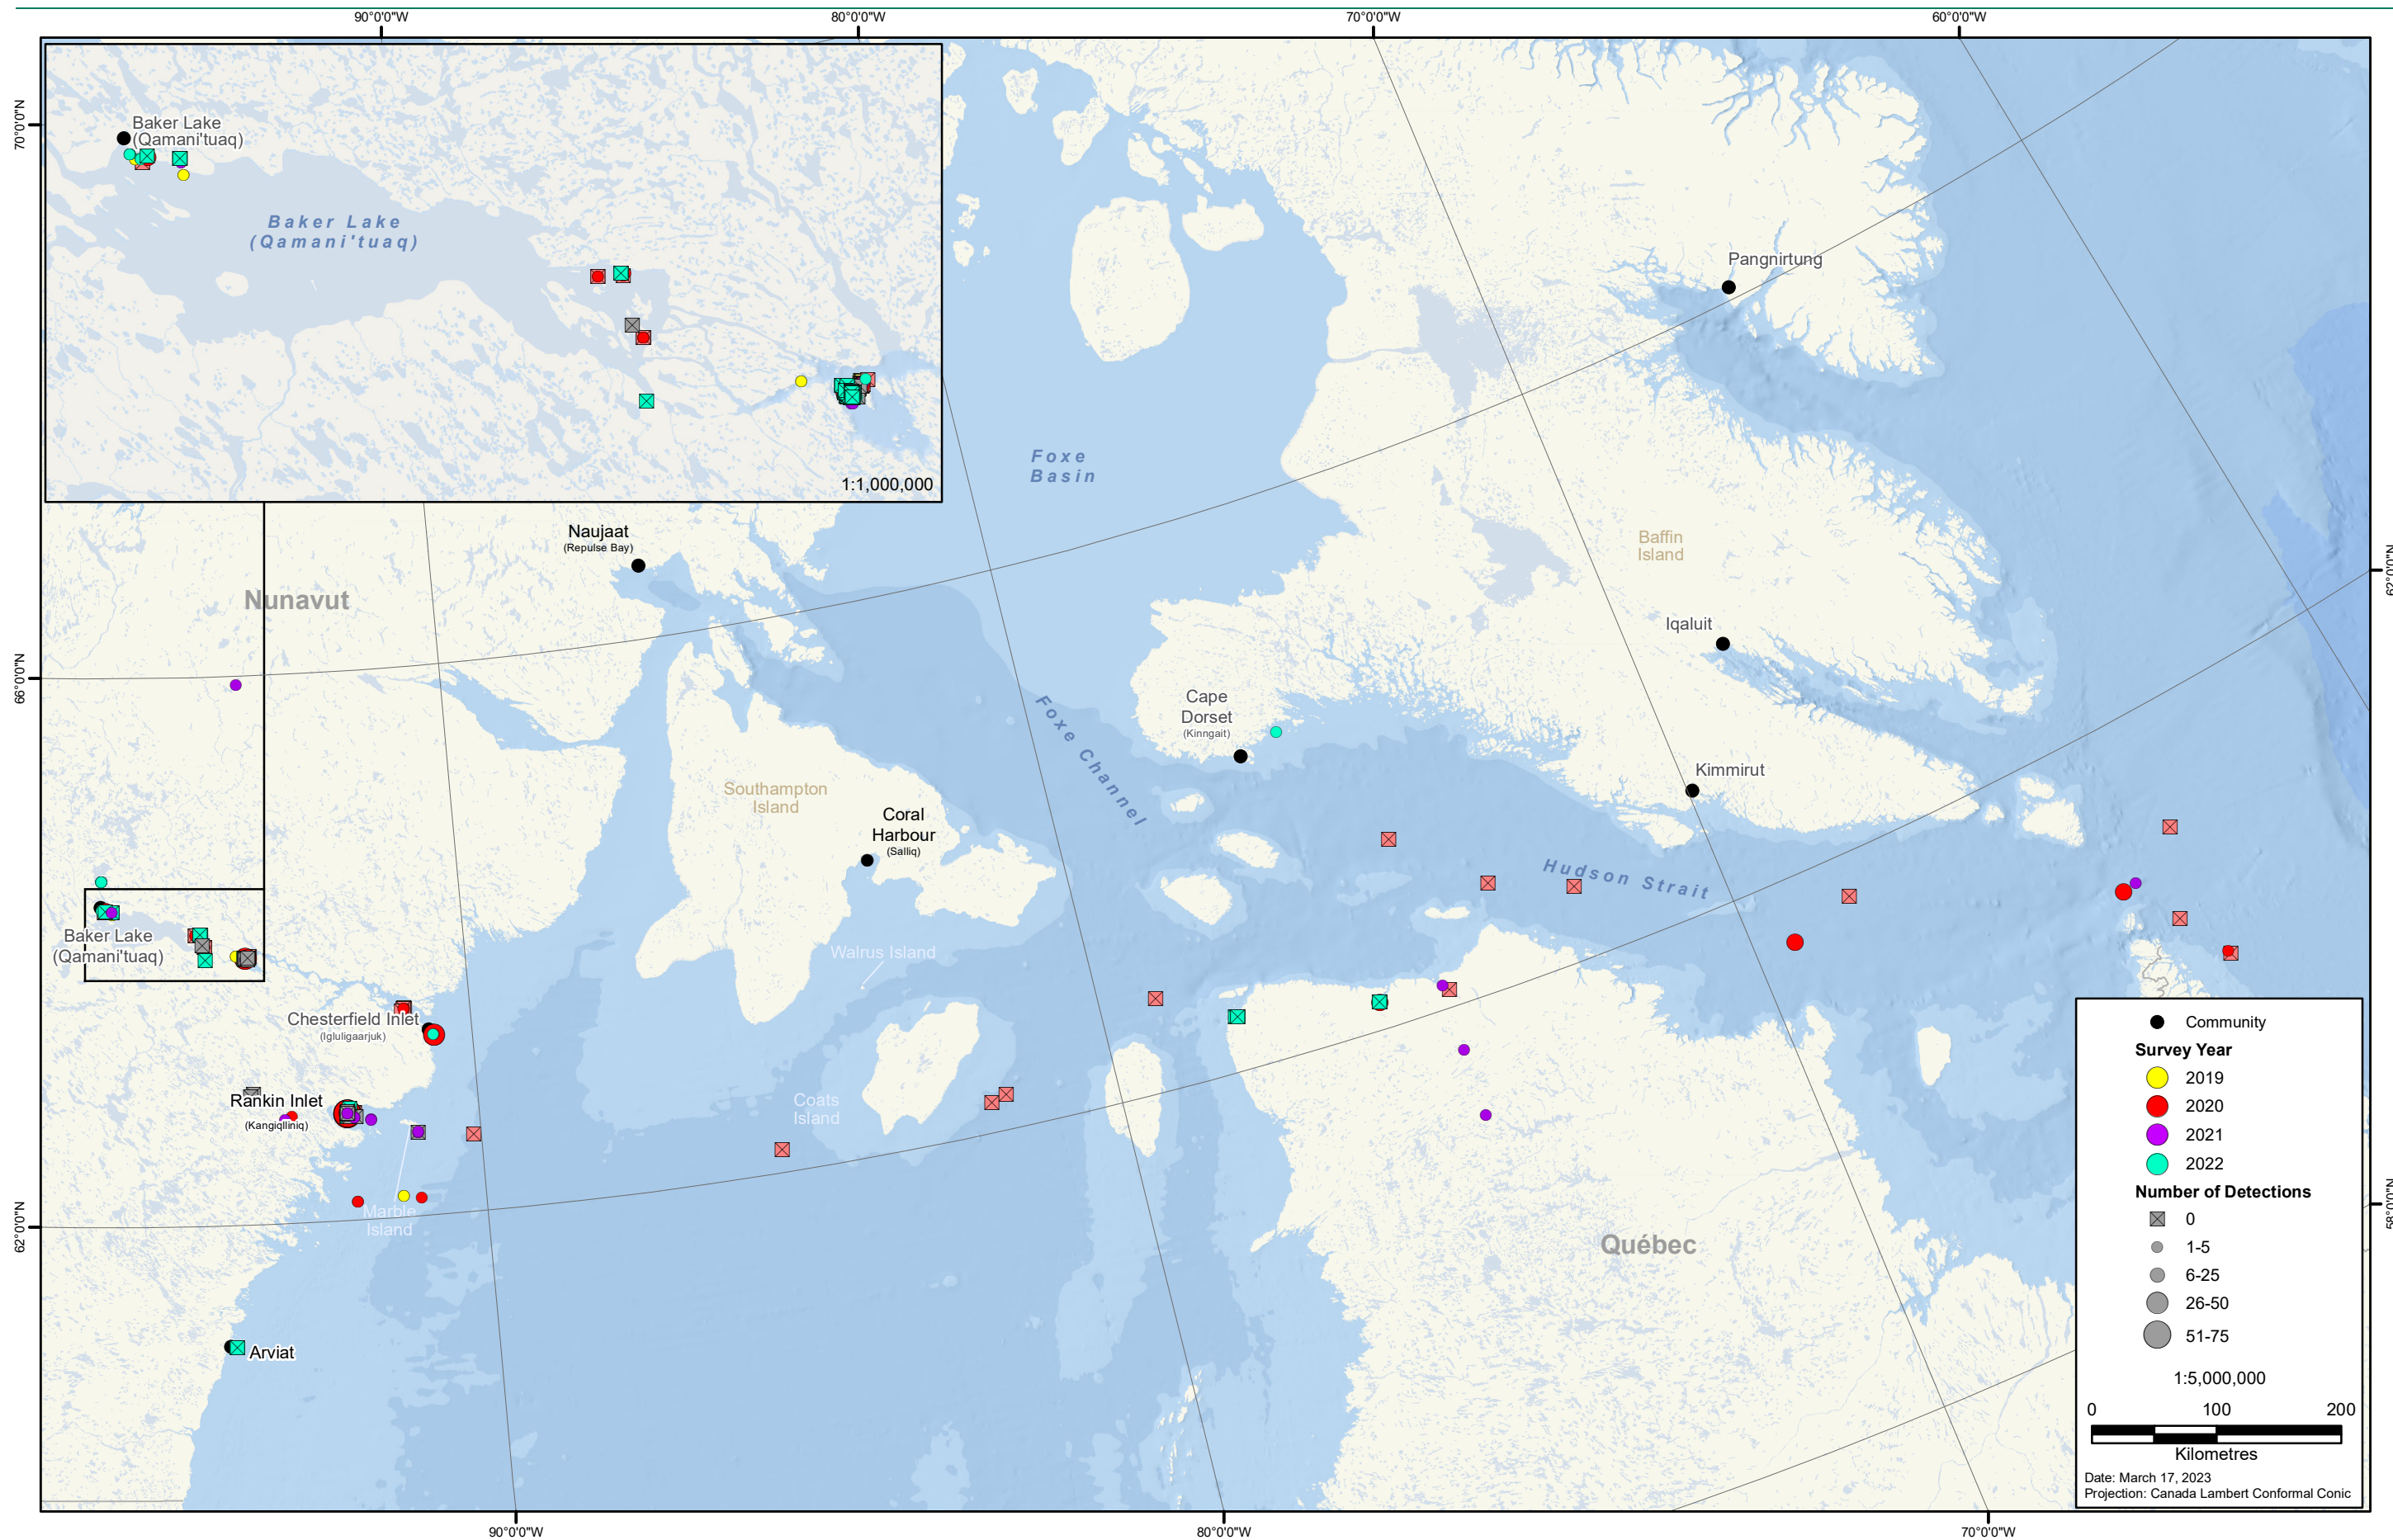

Figure 3.3-4: Seabird Detections during Stationary Vessel Surveys, 2019 to 2022

Table 3.3-7: Top AIC-rated Distance Models, Stationary Vessel Surveys, 2019 to 2022

Model Key and Adjustment	Detection Estimate	Detection SE ¹	Δ AIC ²
Hazard-rate with cosine adjustment	0.036	0.012	0.000
Hazard-rate, no adjustment	0.027	0.012	1.944
Hazard-rate with polynomial adjustment	0.027	0.012	1.944
Uniform with cosine adjustment	0.086	0.017	31.972
Half-normal, no adjustment	0.221	0.010	207.502

Table 3.3-8: Detection Estimates by Year, Stationary Vessel Surveys between 2020 and 2022

Year	Detection Estimate	Detection 95% CIs ¹
All Years	0.221	0.203 – 0.240
2020	0.173	0.146- 0.200
2021	0.239	0.206- 0.272
2022	0.109	0.039 – 0.178

¹ Confidence Intervals (CIs). Values indicate the range in which 95% of samples fall.

The detection estimate for all years of data slightly increased with the addition of 2022 data (estimate increased from 0.193 to 0.221; Table 3.3-8). The detection estimate for stationary vessel surveys is roughly half of that for moving vessels, suggesting that seabirds are less likely to be detected during stationary vessel surveys compared to moving vessel surveys. The result is generally consistent with the data, which indicate that both detections and number of birds recorded per survey were lower for stationary surveys compared to moving surveys (Table 3.3-3). The detection estimate for stationary vessel surveys was much lower in 2022 than previous years (0.109; Table 3.3-8). Survey effort was much lower in 2022 than 2020 and 2021, so the detection estimate is less likely to be accurate. The 95% Confidence Intervals also show a high variability in the 2022 data, likely due to the high number of surveys with no observations, further indicating that the detection estimate may not be accurate. Data from 2021, which represents the majority of the stationary vessel data, shows a higher detection rate (Tables 3.3-3 and 3.3-8). This may indicate that a lack of data is driving the lower detection rate, and more stationary vessel surveys generally increase the detection estimate.

3.4 Marine Wildlife Observations – Baker Lake

When transporting equipment and fuel to Baker Lake for Meadowbank, deep-water vessels can enter Chesterfield Inlet, but must stop at Helicopter Island (Tikirrajquaqkanngir&iq) at the west end of the Inlet. There, material or fuel is loaded aboard barges, and tugs move the barges through the narrow passage connecting Chesterfield Inlet to Baker Lake, and then on to the hamlet of Baker Lake.

To satisfy NIRB Project Certificate No. 004 Term and Condition 36, Agnico Eagle’s Meadowbank Complex is required to engage a local area marine wildlife monitor onboard all vessels transporting fuel or materials for the Project on barge shipping between Helicopter Island and Baker Lake.

Community surveys have been conducted since 2008; however, in 2020 and 2021, community members were not permitted to board vessels due to health and safety restrictions in place related to the Covid-19 pandemic. Therefore, Groupe Desgagnés and Woodward had their MMSOs record sightings of marine mammals and seabirds when possible while travelling on the barge. The vessel companies continued to conduct surveys on the barges in 2022; survey effort and results from these surveys are included in

Sections 3.2 and 3.3 and summarized in Section 3.4.1. Community members were permitted to board the vessels again in 2022 and surveys were resumed as in the years prior to 2020. Agnico Eagle remains committed to meet compliance with Project Certificate No.004 Term and Condition 36 and continues to seek out monitors from the Chesterfield Inlet when possible.

In 2022, 54 incidental surveys were conducted over 22 days by local wildlife monitors between Helicopter Island and Baker Lake in July, August, and October, 32 of which had GPS coordinates to plot their locations (see Figure 3.4-1). Table 3.4-1 summarizes the survey effort while on the barges between 2008 and 2022. Wildlife were observed during 47 of the 54 surveys conducted in 2022. During these surveys, there were 45 separate sightings of birds (total of 117 individuals), one sighting of caribou (a group of five animals), and one sighting of a muskox group (eight animals).

Table 3.4-1: Barge Incidental Survey Effort by Local Wildlife Monitors between Helicopter Island and Baker Lake, 2008 to 2022¹

Year	Survey Dates	Total Number of Days Surveyed
2008*	July 28-31; August 2-5	8
2009	August 19-22; August 26-31; September 3-7	14
2010	October 18-27	10
2011	July 28-31; August 6-7	6
2012	August 6-7	2
2013	August 13-19; October 9-16	15
2014	October 6-10	5
2015	July 9-July 22; July 23-August 5; October 13-21	37
2016*	July 26-31; October 2-13	18
2017*	July; October	-
2018*	-	19 ²
2019	September 19-24	6
2020	July 27-28; August 9-10; August 12; August 15; August 18	7
2021 ³	July 28; October 5-6; October 10; October 18	5
2022 ⁴	July 21-27; August 4-8; October 16-23	22

* Indicates specific dates were not provided – either only months were provided, approximates dates, number of hours surveyed, or dates where observations occurred. A best estimate of number of days surveyed is therefore provided for these years (2008, 2016, 2017, 2018).

¹ During 2020 and 2021, surveys were conducted by Groupe Desgagnés and Woodward vessel crew members rather than community members.

² No dates were provided for 2018, however it was noted that 153 hrs of surveys were completed. Therefore, it was assumed that surveys were conducted 8 hrs per day, for a total of 19 survey days. But it is important to note that this is an estimate based on number of hours surveyed.

³ All surveys conducted on the barge while travelling between Helicopter Island and Baker Lake were seabird survey transects; no marine mammal transects were completed on the barge in 2021.

⁴ In addition to the local wildlife monitor effort, Groupe Desgagnés and Woodward vessel crew members continued to survey between Helicopter Island and Baker Lake. Survey effort and results are summarized in Section 3.4.1 and included in Sections 3.2 and 3.3.

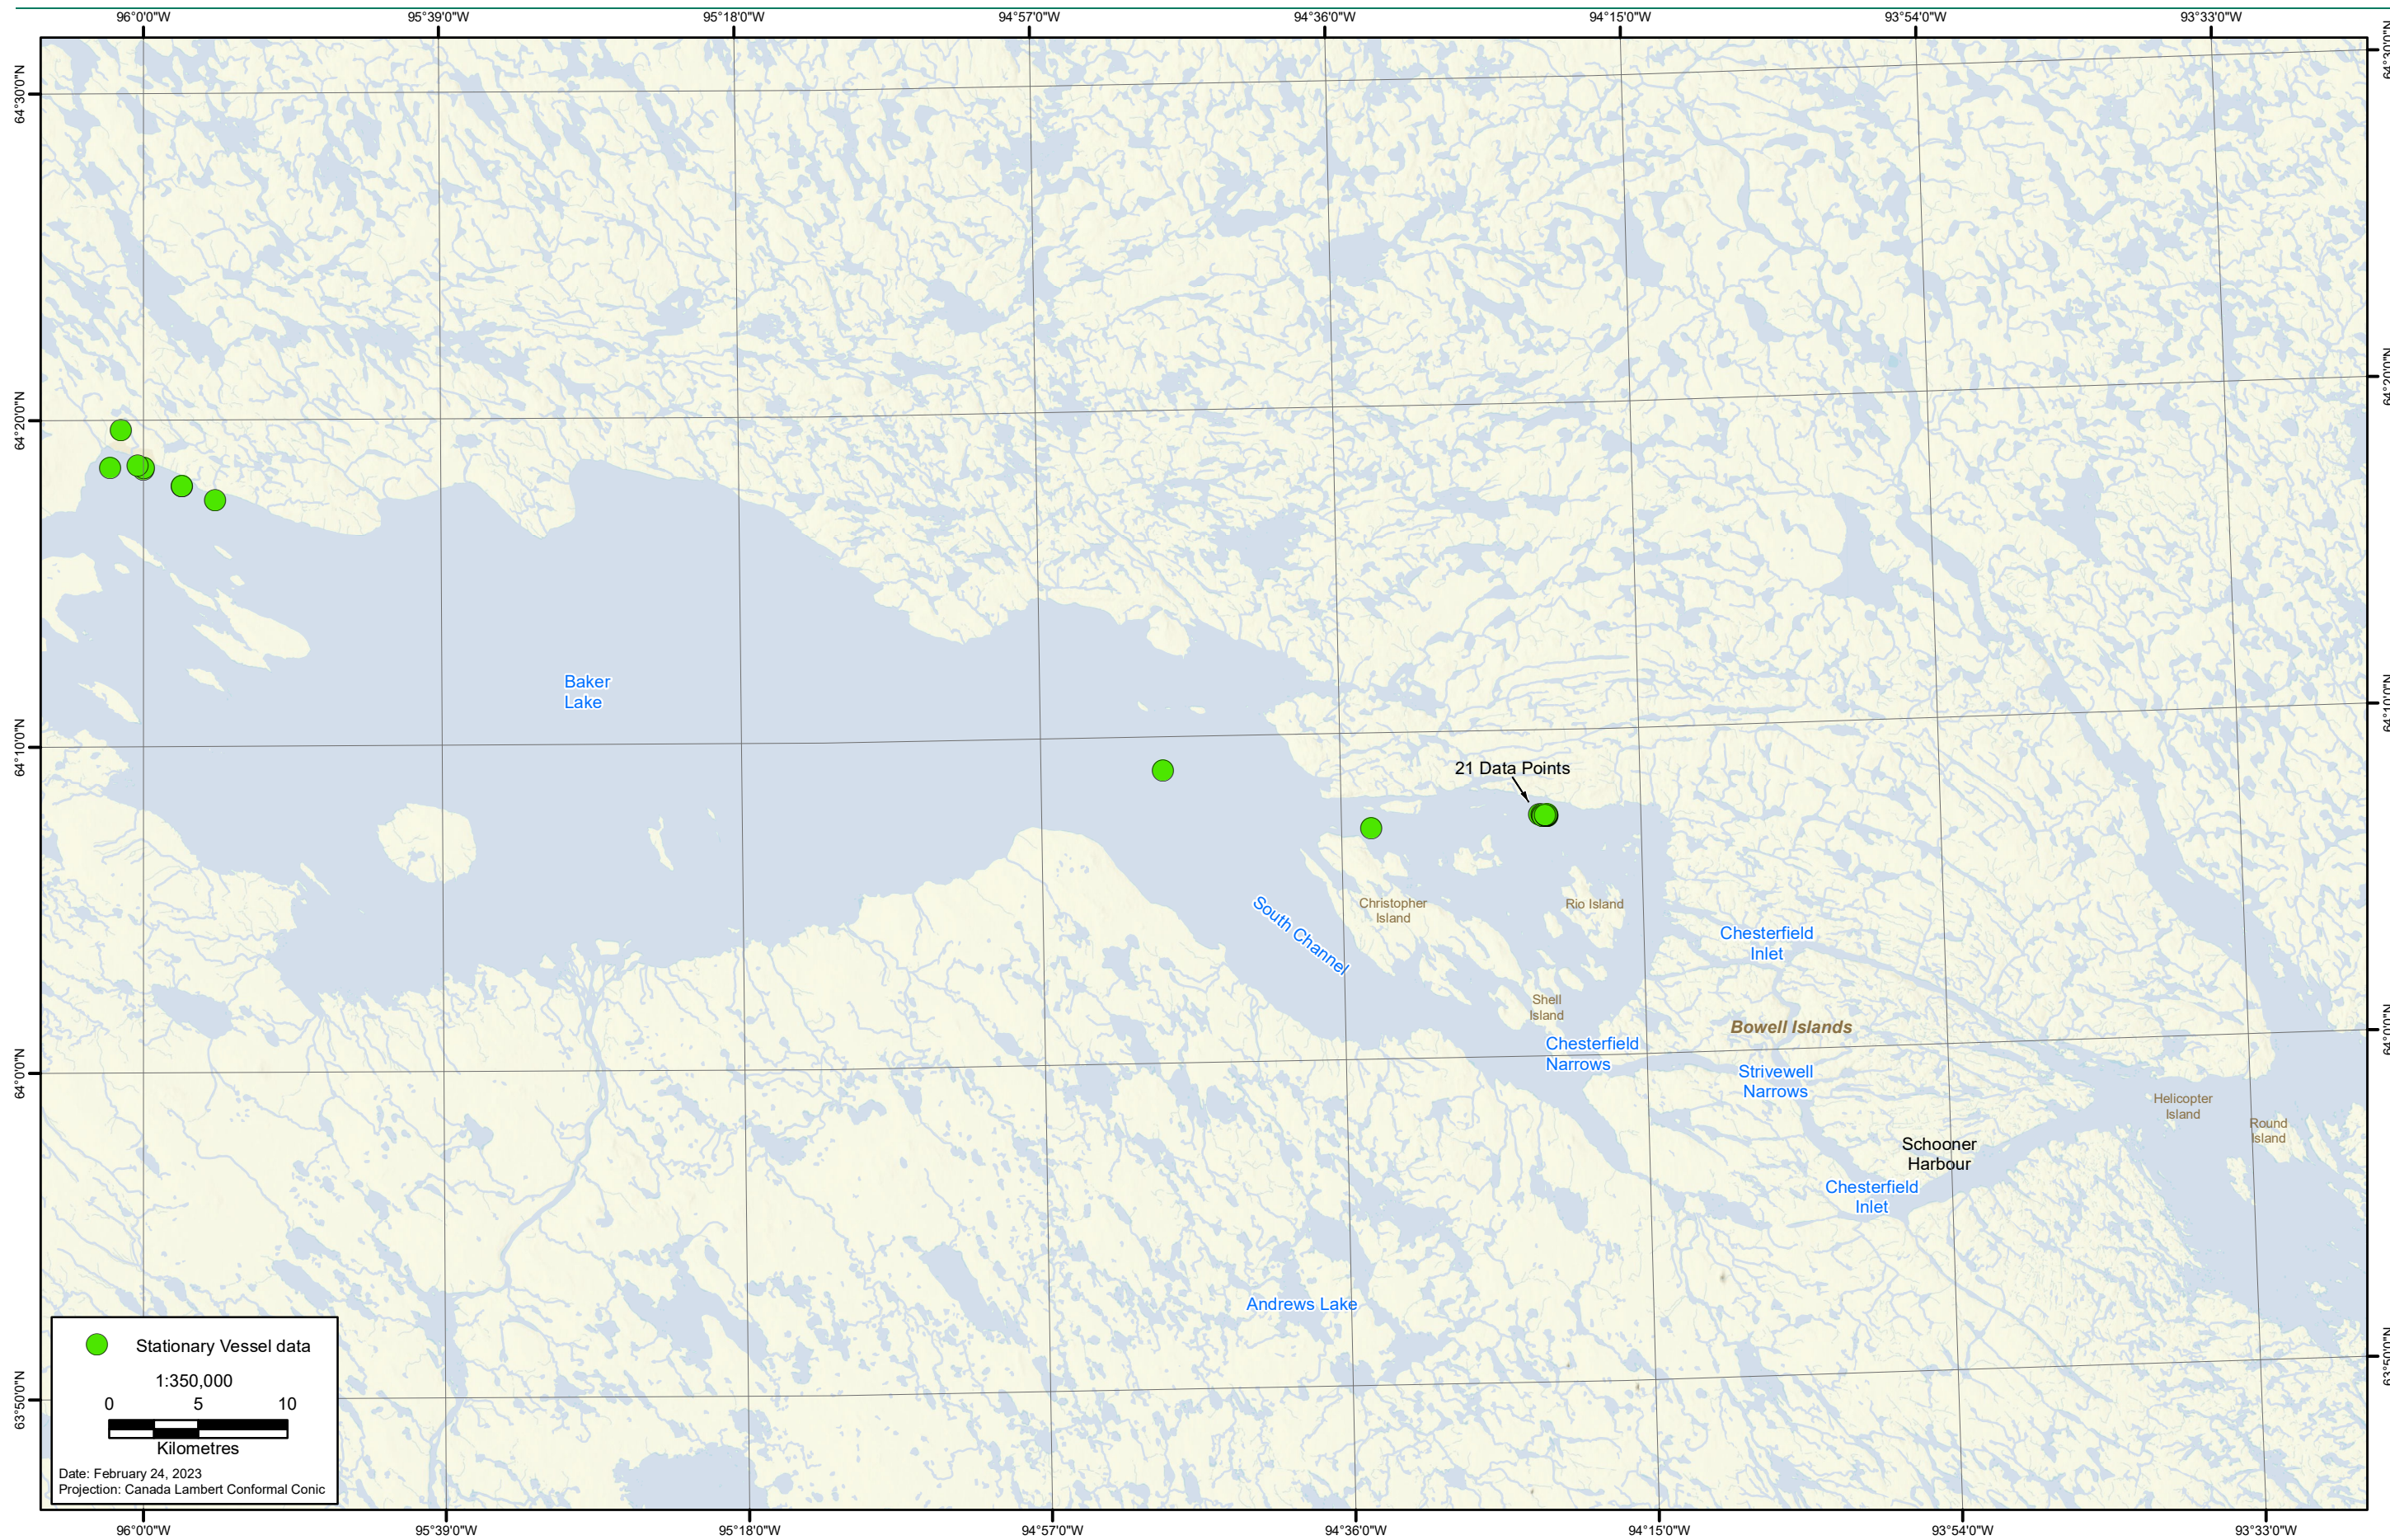

Figure 3.4-1: Wildlife Monitoring Observations between Helicopter Island and Baker Lake, 2022

Tables 3.4-2 and 3.4-3 summarize marine mammal and seabird observations made by the local wildlife monitors onboard contractor vessels transporting fuel for the Meadowbank Mine between Helicopter Island and Baker Lake between 2008 and 2019 and in 2022, and by Groupe Desgagnés Woodward crew members in 2020 and 2021.

Table 3.4-2: Marine Mammals Observed by Local Wildlife Monitors on Barges between Helicopter Island and Baker Lake, 2008 to 2022¹

Year	Month	Number of Days Surveyed	Seals	Polar Bears ²
2008	August	2	2	3
2008	July	1	-	-
2009	August	2	6	-
2009	September	1	2	-
2010	October	1	1	-
2020	August	4	1	-
2021	July	NA ³	-	-
2022 ⁴	August	34	-	-
2022 ⁴	September	16	-	-
2022 ⁴	October	4	-	-

¹ Marine mammals were only observed during wildlife monitoring surveys on the barge in 2008, 2009, 2010, and 2020. No other marine mammals were recorded during surveys between 2011 and 2019. During 2020 and 2021, surveys were conducted by Groupe Desgagnés and/or Woodward vessel crew members rather than community members.

² Species listed as Special Concern on Schedule 1 of the federal Species at Risk Act (SARA).

³ No surveys were conducted on the barge travelling between Helicopter Island and Baker Lake in 2021 due to crew requirements and the majority of transits occurring during dark hours; however, 25 stationary surveys for marine mammals were conducted while the vessel was at anchor at Helicopter Island, but these results are presented in Section 3.2.2 of the report and not summarized in this table.

⁴ Groupe Desgagnés and Woodward vessel crew member survey effort and observations between Helicopter Island and Baker Lake are not included in this table but are included in Section 3.2 and summarized in Section 3.4.1.

Table 3.4-3: Seabirds Observed by Local Wildlife Monitors on Barges between Helicopter Island and Baker Lake, 2008 to 2022

2022 ³	October	4	-	-	-	-	-	-	-

* Number of individuals observed was often not recorded, just the species seen. In these cases, 1+ is entered in the table, as the number observed is unknown.

¹ '-' indicates none observed.

² Includes northern fulmar, petrel, cormorant, and jaeger.

³ Groupe Desgagnés and Woodward vessel crew member survey effort and observations between Helicopter Island and Baker Lake in 2022 are not included in this table but are included in Section 3.3 and summarized in Section 3.4.1.

3.4.1 Groupe Desgagnés and Woodward Observations – Baker Lake

In addition to community wildlife observers, the shipping companies continued to record marine wildlife sightings while vessels were at anchor near Helicopter Island, or on the tugs/barges between Helicopter Island and Baker Lake to supplement the community observer effort. These results are presented in Sections 3.2 and 3.3 and summarized here.

In 2022, crew members onboard the tugs (Atlantic Beech and Atlantic Elm) recorded a total of 54 incidental sightings while transiting between Helicopter Island and Baker Lake over 27 separate days between July 13 and October 24. No marine mammals were recorded incidentally, and a total of 233 seabirds were recorded across 13 different species. These results are included in Section 3.2 and 3.3.

In addition to the incidental sightings by the barges, vessels also completed stationary surveys while anchored at Helicopter Island and moving transect surveys when conditions allowed. In 2022 there were 34 stationary surveys for marine mammals completed at Helicopter Island, and one moving transect survey between Helicopter Island and Baker Lake. No marine mammals were observed during any of these surveys.

For seabirds, 110 stationary surveys completed while anchored at Helicopter Island. Of these surveys, 27 had sufficient data to calculate temporal effort while 83 were missing either a survey start time, end

time, or both. There was a total of 13.6 hours of survey time across those 27 surveys lasting an average of 0.5 hours per survey. The stationary surveys recorded a total of 383 individual seabirds across 15 different species (included in Section 3.3).

In addition to the stationary surveys, 15 moving transect surveys for seabirds were completed between Helicopter Island and Baker Lake. Of these 15 surveys 14 were conducted by the Kivalliq W. and one was conducted by the Tuvaq W. Of these surveys all 15 had sufficient spatial data to calculate spatial effort. There was a total of 154 km of survey effort. During moving transect surveys, 172 individual seabirds of 12 different species were observed (included in Section 3.3).

No sightings of marine mammals were recorded during the barge surveys between 2011 and 2019, or between 2021 and 2022. In previous years, seals were the most commonly observed marine mammal. Bird observations are summarized by species groups, as they were not often identified to the species. Gulls were the most commonly observed bird during surveys. In addition, caribou (*Rangifer tarandus*), muskox (*Ovibos moschatus*), fox (*Vulpes* species), wolves (*Canis lupis*), and rabbits (*Lepus arcticus*) were observed on land from the vessel between 2008 and 2019, and caribou and muskox were observed on land in 2022.

4. CONCLUSIONS

Overall, survey effort and quality of data collected by the MMSOs has improved since 2019. Marine mammal survey effort in 2022 was similar to 2020 and 2021, all of which were improvements from previous years. It is likely that the enhanced training for vessel crew members over the last three years helped improve the number of surveys completed, as well as the quality of data collected. Seabird survey effort in 2022 was generally greater than in previous years, illustrating increased understanding by the vessel captains and crew of the MMSO Program requirements.

Agnico Eagle will continue to improve training for the vessel crew members in the following areas:

1. The training given to the vessel's crew MMSO will be reviewed every year to ensure all crew members are prepared for the shipping season.
2. The seabird surveys were primarily completed in six consecutive five-minute periods, repeated three times a day according to the ECSAS protocol. Updated datasheets in 2022 helped emphasize the correct data collection protocol. Training for the MMSOs will continue to focus on this aspect of the methodology again in 2023.
3. Incomplete data entry (i.e., data entry fields for survey effort left blank) continues to occur. In 2022, approximately 15% of marine mammal survey data were missing information such as start or end times, or positions. This is a decrease from early years of the program and similar to 2021. For seabird surveys, roughly 40% of moving vessel surveys and 70% of stationary vessel surveys were missing effort. This is more than double the number of missing effort entries in 2021. The increase in missing effort information is likely due to the change in survey data collection requiring six intervals, and therefore six records of start/end times and positions per survey. The requirement for all six entries on the datasheet increased the proportion of seabird surveys with some missing data. Agnico Eagle will continue to emphasize the importance of complete data collection and continue to encourage all MMSOs to complete the data entry fields.
4. Species identification while at sea can be challenging. Agnico Eagle provided species identification sheets to the vessels in 2020, 2021, and 2022 but additional aids (e.g., species identification posters) will be investigated for the 2023 shipping season.
5. The vessel's captain and crew will continue to be informed of specific mitigations to be used to manage interactions with marine mammals and birds.

**APPENDIX A SHIPPING MANAGEMENT PLAN SUMMARY BROCHURE –
MEADOWBANK AND MELIADINE**

AGNICO EAGLE

SHIPPING MANAGEMENT PLAN

Meadowbank and Meliadine

SHIPPING MANAGEMENT PLAN SUMMARY

This document summarizes the information found in the Agnico Eagle Shipping Management Plans for Meadowbank and Meliadine (Agnico Eagle 2018a; 2018b) into a single convenient package for review and as a reference document. It is expected that all bridge crew on all vessels supplying Meadowbank and Meliadine review this document and have it available on the bridge of the vessel while under way.

The Meadowbank division has implemented a vessel-based Marine Mammal and Seabird Observer (MMSO) program since 2010, and the Meliadine division since 2016. These programs will continue to be implemented during all routine project-shipping activities, in accordance with Meadowbank Mine NIRB Project Certificate No. 004 Condition 36 and Meliadine NIRB Project Certificate No. 008 Condition 40.

The NIRB conditions require Agnico Eagle to include in its contracts that ships must remain mindful of marine areas having a high density of marine mammals and birds. Agnico Eagle's NIRB Project Certificates include conditions to ensure the mitigation measures and monitoring programs outlined in this summary document are conducted by shipping companies; thus, shipping companies are required to review and become familiar with the information summarized in this document.

GENERAL GUIDELINES FOR OPERATION OF VESSELS

The Shipping Management Plans include Mitigation, Management, Monitoring and Reporting requirements:

1. Mitigation: Standard operation of the vessel.

Avoidance of seabird colonies and marine mammal haul-outs on shore

Vessel operation – maintain straight course, constant speed, avoid erratic behaviour

2. Management: What to do when you see a marine mammal or seabird.

Avoidance of marine mammals and seabirds on the water

What to do if a marine mammal approaches the vessel

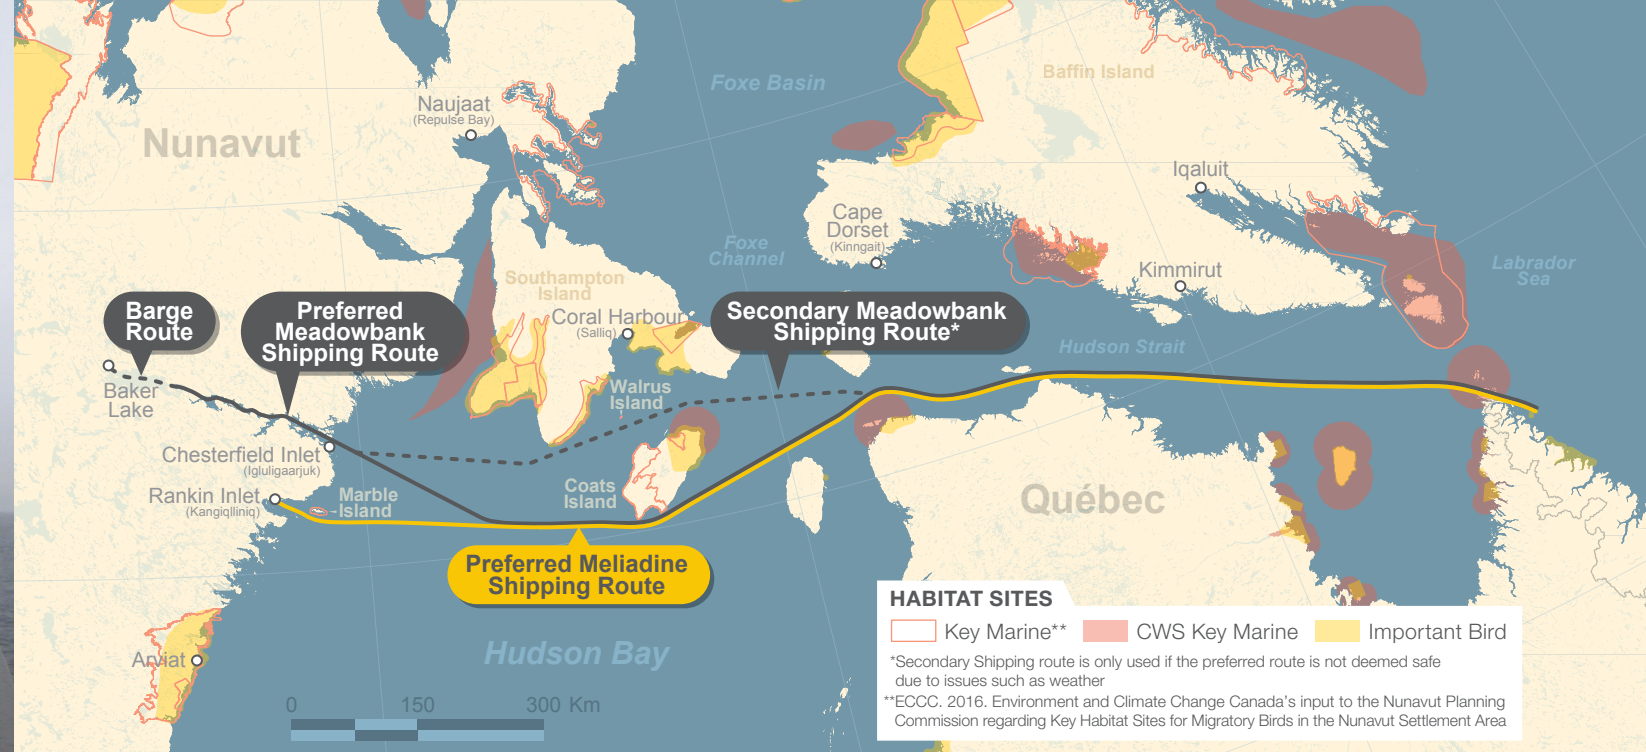

3. Monitoring: The Marine Mammal and Seabird Observation Program.

Monitoring for marine mammals and seabirds

4. Reporting: Monitoring data sent to Agnico Eagle. How to report collisions or incidents to Agnico Eagle and the government.

Monitoring data sent to Agnico Eagle

What to do if there is a collision with a marine mammal

Ship captains and crew should review the following mitigation measures and be familiar with guidelines around marine mammals and seabirds, as well as navigational options for vessel maneuvers when encountering marine mammals and seabirds. Mitigation and management measures are summarized from the Shipping Management Plans for Meadowbank and Meliadine.

1. General navigational requirements while travelling through Hudson Strait to Helicopter Island or Rankin Inlet, include the following:

- a. Ships will, when possible, maintain a straight course and constant speed, and avoid erratic behaviour;
- b. Marine mammals will be given right of way as safe navigation allows;
- c. The ship will not be operated in such a way as to separate an individual member(s) of a group of marine mammals from other members of the group;
- d. Ships will maintain the required setback distances around marine mammals and seabirds on land;

Avoiding Marine Mammals and Seabird Colonies on Land

Maintain a setback distance of >500 m from colonies of seabirds and marine mammals on shore

Avoiding Marine Mammals on Sea Ice

Do not approach within 300 m of a walrus or polar bear observed on sea ice

- e. Ships will use a routing south of Coats Island as the primary shipping route;
- f. Ships travelling for the Meliadine project will remain at least 2 km from Marble Island to avoid disturbing seals, walrus and marine birds that might be in the vicinity; and

g. Ships will maintain the required setback distances around marine mammals and seabirds in the water.

General Guidance on the Water

Vessels maintain > 500 meters from aggregations of seabirds and marine mammals on the water*

Whales Always Have Right-of-Way

Vessel Operation: Maintain straight course, constant speed, avoid erratic behavior

As per **Marine Mammal Regulations s.7(3)**, maintain a minimum of 100 m from marine mammals at all times

What to do if a Marine Mammal Approaches the Vessel

Option 1

Reduce its speed and, if possible, cautiously move away from the animal

Option 2

If it is not possible for the ship to move away from or detour around a stationary marine mammal or group of marine mammals, the ship will reduce its speed and wait until the animal(s) move to the side and remain 100 m to 500 m (Meadowbank) from the ship prior to resuming speed

Option 3

If animals appear to be trapped or disturbed by ship movements, the ship will mitigate disturbance (e.g., stoppage of movement) until the animal(s) has moved away from the immediate area

*** The two projects have slightly different guidance on setbacks:**

Meadowbank – Maintain 500 m away from feeding marine mammals and aggregations of seabirds and marine mammals
 Meliadine – Maintain 300 m from feeding marine mammals.
 Meliadine – Maintain 100 m away at all times.

- 2. As part of shipping companies' standard operating procedures, ship crews will monitor for marine mammals and seabirds from Hudson Strait to the lightering point near Helicopter Island (Meadowbank) or Rankin Inlet (Meliadine).
- 3. The ship's Master will be notified if there is a concern of the ship striking a marine mammal.
- 4. Ship personnel will make a decision if actions are required to avoid a possible collision by implementing management measures, if safe to do so.
- 5. If a collision occurs, the appropriate people will be contact and the incident will be documented.

MARINE MAMMAL MANAGEMENT AND MONITORING PROGRAM

The Marine Mammal Management and Monitoring Plan (MMMMP) was developed for the Project to meet commitments made during the Nunavut Impact Review Board (NIRB) hearings related to Marine Shipping. The MMMMP was designed to provide protocols for conducting a vessel-based Marine Mammal and Seabird Observer (MMSO) program during all routine shipping activities along the shipping route.

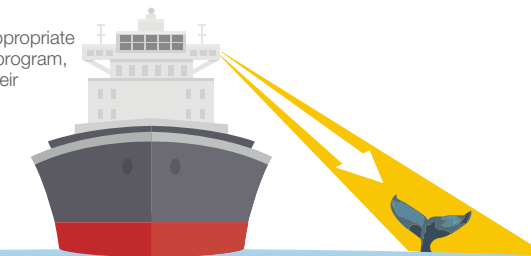

A Marine Mammal and Seabird Observer (MMSO) will be assigned by the captain prior to departure. The role of the MMSO is to record and report on marine mammals and seabird sightings during shipping activities along the shipping routes, and to advise the ship's crew on the location of observed marine mammals and if any action is recommended based on mitigation measures. MMSO and other crew members are also encouraged to collect incidental sightings (i.e., observations of marine mammals or seabirds NOT during dedicated monitoring) during their voyage and to report it to Agnico Eagle in addition to the MMSO data. Standard monitoring and data collection protocols for marine mammals and seabirds will be provided to the crew in the form of Standard Operating Procedures (SOPs) and in-person or online training.

THE MARINE MAMMAL AND SEABIRD OBSERVATION (MMSO) PROGRAM

1. Ship crews (the assigned MMSO) will monitor for marine mammals and seabirds from Hudson Strait to the lightering point near Helicopter Island (Meadowbank) or Rankin Inlet (Meliadine)
2. The ship's Master will be notified if there is a concern of the ship striking a marine mammal
3. Ship personnel will make a decision if actions are required to avoid a possible collision

*It is the responsibility of captains to ensure that appropriate crew members have been trained on the MMSO program, conduct the MMSO while underway and report their findings to Agnico Eagle.

HOW OFTEN DOES THE MMSO SURVEY?

Marine Mammal Monitoring: Conduct at least 1 dedicated survey per day, lasting 1.5 to 2 hrs beginning in Hudson Strait

Seabird Monitoring:

- Conduct 1 to 3 dedicated surveys per day
- Each survey lasts 30 min, made up of **6 separate 5-min observation periods**, beginning in Hudson Strait

Incidental Sightings: While traveling from Hudson Strait to Rankin Inlet/Helicopter Island, look for marine mammals incidentally to avoid collisions and record incidental sightings

REPORTING

Data collected by the MMSOs must be submitted annually by Agnico Eagle to the Government of Nunavut and other applicable regulators (e.g., Environment and Climate Change Canada (ECCC) - Canadian Wildlife Service (CWS)) regarding the location, behaviour, abundance, and species observed as well as any interactions with Project vessels during shipping activities along the shipping route. Therefore, data and ship tracks must be submitted to Agnico Eagle within 2-3 weeks of completion of the voyage.

VESSEL OPERATORS REPORT THE FOLLOWING INFORMATION ANNUALLY TO AGNICO EAGLE

Vessel Information:

- Name
- Dates of Transit
- Track log from Montreal to Agnico Eagle site
- General description of cargo

Track Information:

- A GPS track of the vessel route

MMSO Information:

- All data sheets collected by MMSO
- A record of any Management – avoidance of marine mammals or seabirds
- All incidental sightings of marine mammals or seabirds collected during the voyage (i.e., not during the dedicated MMSO surveys)

IF A COLLISION OCCURS

Report all collisions to Agnico Eagle:

Sara Savoie: Work: +1 (819) 759-3555 x 460321 Cell: +1 (819) 856-9349
 Alexandre Lavallee: Cell: +1 (819) 860-0804

AGNICO EAGLE

If a Marine Mammal and Vessel Collision Occurs Contact DFO:

Central and Arctic, Nunavut – Iqaluit: +1 (867) 979-8000

Captain must report the following information (as per Marine Mammal Regulations s.39):

- Date, time and location of the incident;
- Species of marine mammal involved in the incident;
- Circumstances of the incident;
- Size and type of vehicle;
- Weather and sea conditions at the time of the incident;
- Observed state of the marine mammal after the incident; and
- Direction of travel of the marine mammal after the incident, to the extent that it can be determined.

Marine Mammal Monitoring

STANDARD OPERATING PROCEDURE

SHIP-01

June 8 2022

Version B.3

Scope of Work: This SOP provides guidance for marine mammal monitoring procedures for shipping companies contracted by Agnico Eagle. Monitoring is conducted to avoid potential effects to marine mammals. The shipping companies are required to record marine mammal observations based on the protocols outlined in this SOP along the shipping route between Hudson Strait and Helicopter Island/Rankin Inlet.

1. PROGRAM DESCRIPTION AND OBJECTIVES

A Marine Mammal Monitoring Standard Operating Procedure (SOP) has been developed to guide onboard monitoring for marine mammals. This SOP satisfies the Meadowbank Mine NIRB Project Certificate No. 008 Condition 40 and the Meliadine NIRB Project Certificate No.006 Condition 82.

The purpose of this SOP is to identify the monitoring procedures for shipping companies contracted by Agnico Eagle to avoid potential effects to marine mammals. This document outlines the following:

- how to avoid or adjust shipping speed near sensitive wildlife habitat along shipping routes;
- how to record observations of marine mammals, which includes whales, pinnipeds (i.e., seals and walruses), and polar bears;
- potential mitigation if marine mammals are observed;
- how to record and report mitigation measures taken, if applicable; and
- how to record and report ship strikes of marine mammals if they occur.

Agnico Eagle will update this SOP as necessary, in response to feedback from the Department of Fisheries and Oceans (DFO), Environment and Climate Change Canada (ECCC) or in response to data collected in the field or scientific advances.

2. MARINE MAMMAL MONITORING

2.1 Overview

The following protocol will be implemented during the Marine Mammal and Seabird Observer (MMSO) program:

- A minimum of one assigned MMSO will be present on-board vessels during all transits;
- The MMSO will conduct marine mammal observations along the shipping route from the bridge during daylight hours and record sightings into the *Marine Mammal Sightings Form* (Attachment A); and
- The shipping contractor will initiate mitigation measures designed to minimize Project impacts on marine mammals, as identified in the Marine Shipping Mitigation Summary Booklet and summarized in Attachment B.

2.2 Training

The captain is responsible to assign an MMSO to the bridge, and to ensure that the MMSO has been trained to identify marine mammals and seabirds.

Training for the assigned MMSOs includes:

- The pre-trip training live webinar, or review of the recorded webinar prior to beginning the MMSO duties. The recorded webinar will also be available on the ship for review as needed;
- Review the Marine Mammal Monitoring SOP (this document), the Marine Shipping Mitigation Summary Booklet, and the Seabird Monitoring SOP (SOP # SHIP-02);
- Review marine mammal identification, including common species provided in Attachment C (Whale ID Guide and Pinniped ID Guide);
- Know how to estimate distances to animals observed; and

- Review how to fill out the *Marine Mammal Sightings Form* (Attachment A) and the *Marine Mammal and Seabird Observer (MMSO) Incident Report Form* (Attachment D).

2.3 Equipment

Bridge staff participating in wildlife monitoring will require the following when conducting surveys:

1. This SOP;
2. Whale ID Guide and Pinniped ID Guide (Attachment C);
3. *Marine Mammal Sightings Form* (Attachment A);
4. *MMSO Incident Report Form* (Attachment D);
5. Binoculars;
6. GPS (only required if unable to get GPS coordinates from the ship); and
7. Clipboard and pencil.

2.4 Marine Mammal Monitoring Methods

Marine mammal surveys are required along the shipping route from Hudson Strait to Helicopter Island/Rankin Inlet, and during the return journey from Helicopter Island/Rankin Inlet through Hudson Strait (Figure 2.4-1). Surveys must be conducted at least once per day, but two surveys per day is preferred.

General environmental and marine mammal sightings information is to be collected and recorded by filling out the form in Attachment A. The protocol outlined in this section are best conducted along a transect line, therefore, it is best to start a marine mammal observation period when the vessel is and will be moving in a straight line for an extended period of time.

2.4.1 Observation Period

- Marine mammal monitoring is required from Hudson Strait to Helicopter Island (Meadowbank) or Rankin Inlet (Meliadine), along the shipping route presented in Figure 2.4-1.
- Conduct a minimum of 1 survey per day; however, 2 surveys per day is preferred when timing allows.
- Prioritize conducting surveys around Coats Island, Hudson Strait, and/or approaching Helicopter Island/Rankin Inlet.
- MMSO observation periods should last approximately 1.5 hours, but should not last longer than 2 hours to mitigate observer fatigue and eyestrain.
- During dedicated surveys, sightings are only recorded by the MMSO, with no assistance permitted by other crew members.
- For each observation period, document information on the ship's location, travelling speed and direction, environmental conditions on a *Marine Mammal Sightings Form*.

2.4.2 Observer Position

- Observations will be done from a high location on the vessel and ideally outdoors if possible and will be conducted at the same location each time.
- For marine mammal observations, depending on the weather conditions and safety requirements for the crew, the MMSO will position themselves in the middle of the ship at the front (bow) to observe marine mammals on both the starboard and the port side (Figure 2.4-2).

Figure 2.4-1: Shipping Routes during the Open Water Season

MMSO will record observations of marine mammals noted within a 180° viewing area (port to starboard) out to the horizon

Figure 2.4-2: Illustration of MMSO Position and Observation Field on a Vessel

2.4.3 Scan Routine

1. How to Scan for Marine Mammals

- Scan the water from the vessel out to the horizon with the naked eye and use binoculars only to focus on possible sightings.
- Scans should be made from the middle of the vessel and cover the scan area shown in Figure 2.4-2 with a focus on the water ahead and to the side to the moving vessel (e.g., focused scan area in Figure 2.4-2).
- Perform S and U scans (Figure 2.4-3) of the observation field about every 20 seconds looking for whale cues (e.g., blow, back surfacing). The most important aspect of marine mammal observing is to constantly scan the observation field to capture animals that could be located in the peripheral view for brief moments (e.g., surfacing).
- If a whale or pinniped (seal or walrus) is observed, record the sighting on the *Marine Mammal Sightings Form*, as per instructions in Step 2 below.
- Surveys are prioritized when the vessel is moving; however, if the vessel is stationary (e.g., anchored) for a day or portion of a day, then a marine mammal survey will be required while anchored. If this is required, scans should be conducted over the entire scan area in a uniform fashion.

2. What to Do When a Marine Mammal is Observed

- Marine mammals observed during the dedicated marine mammal observational periods will be recorded on the *Marine Mammal Sightings Form*, including:
 - GPS location;
 - Distance to animal from vessel;
 - Angle to animal (Figure 2.4-4 shows how an angle to a marine mammal from the vessel should be estimated);
 - Number of marine mammal individuals;
 - Unknown species – if a species is unknown or if a blow is the only detection of the animal observed, then mark the sighting as unknown or record the general species group (e.g., whale, seal, walrus, polar bear), and provide a description of what was seen (e.g., colour of animal, how many were observed, behaviour, dorsal fin present or absent, etc.); and
 - Behaviour (e.g., travelling, feeding, other).
- Marine mammals in large groups that are close together should be marked as a single sighting.
- Sightings of pinnipeds (seals, walrus) hauled-out on land or of a polar bear on land will be recorded with a description in the “Notes” section indicating the animal(s) were observed on land.
- If a marine mammal is counted twice or more in the sightings record, then a note of a re-sighting should be marked.
- When possible, take photographs of marine mammal sightings and record the photo name/number alongside sightings records. These photos must be provided to Agnico Eagle along with the completed datasheets.
- If no marine mammals are observed during a survey period, then the top sections of the *Marine Mammal Sightings Form* must still be completed (including “General Information”, “Vessel Information”, and “Environmental Information”) with “No animals observed” entered into the “Notes” section.
- If a marine mammal sighting is close to the vessel and requires mitigation measures, or if a ship strike occurs, refer to Section 3 of this SOP and complete the *MMSO Incident Report Form* (Attachment D);
- Ensure no cell on the *Marine Mammal Sightings Form* is left blank.

Figure 2.4-3: Illustration Showing How to Conduct S & U Scanning Techniques

Note: Example shows angle to the animal (blue dot) is approximately 22°.

Source: Agnico Eagle 2020.

Figure 2.4-4: How to Determine Angle to Marine Mammal

2.5 Incidental Marine Mammal Sightings – “Off Effort”

During sailing from Hudson Strait to Helicopter Island/Rankin Inlet, the ship’s crew is required to keep watch for marine mammals along the shipping route. This is not part of the MMSO dedicated surveys. Whenever a marine mammal is observed outside of the dedicated survey time, this is called an incidental sighting, or “off-effort”. These sightings are recorded on the *Incidental Marine Wildlife Sightings Form* (Attachment E) and provided to Agnico Eagle for reporting. This includes all sightings of whales, seals, walruses, polar bears, and hauled-out animals.

If an incidental sighting is close to the vessel and requires mitigation measures, or if a ship strike occurs, refer to Section 3 of this SOP and complete the *MMSO Incident Report Form* (Attachment D).

3. MITIGATION AND REPORTING

In the event bridge crew observe marine mammals within 100 m of the vessel for Meliadine, and 500 m of the vessel for Meadowbank, refer to the Marine Shipping Mitigation Summary Booklet for recommended responses (e.g., slowing vessel, change direction). Management responses will be documented on the *Marine Mammal Sightings Form* for that observation. In addition, if a ship strike occurred or other incident (e.g., animal appears affected by the vessel), the MMSO must also fill in the *MMSO Incident Report Form* (Attachment D). Mitigation measures are also summarized in Attachment B.

If bridge crew determine a ship strike of a marine mammal has occurred, complete the *Marine Mammal Sightings Form* and indicate that the observation was the result of a ship strike. If the ship strike is a marine mammal the ship’s captain is to report the strike to Agnico Eagle (contact listed at the top of this SOP) as soon as practical and within 24 hours.

In addition, as per *Marine Mammal Regulations* s.39, the captain must also report a strike to the DFO minister, including the following information:

- the date, time and location of the incident;
- the species of marine mammal involved in the incident;
- the circumstances of the incident;
- the size and type of vehicle and, if applicable, the type of fishing gear involved in the incident;
- the weather and sea conditions at the time of the incident;
- the observed state of the marine mammal after the incident; and
- the direction of travel of the marine mammal after the incident, to the extent that it can be determined.

DFO Contact Information:

- Central and Arctic, Nunavut – Iqaluit: 1-867-979-8000.

4. END OF TRIP REPORTING REQUIREMENTS

The following information will be submitted to the Agnico Eagle Environment Team (contact information provided at the top of this SOP) after each shipping trip for collation into a database:

1. Spatial file of the shipping route;
2. Completed *Marine Mammal Sightings Forms*;
3. Completed *MMSO Incident Report Forms* (if required); and
4. Photographs taken of sightings.

5. RECOMMENDED GUIDES

Reeves et al. 2002. *National Audubon Society's Guide to marine Mammals of the World*.

Additional Recommended Training/Practice: <http://www.dfo-mpo.gc.ca/species-especes/mammals-mammiferes/identification-guide/index-eng.html>.

ATTACHMENT A MARINE MAMMAL SIGHTINGS FORM

ATTACHMENT B MARINE SHIPPING MITIGATION SUMMARY

General Guidance on the Water

Vessels maintain > 500 meters from aggregations of seabirds and marine mammals on the water*

Whales Always Have Right-of-Way

Vessel Operation: Maintain straight course, constant speed, avoid erratic behavior

As per **Marine Mammal Regulations s.7(3)**, maintain a minimum of 100 m from marine mammals at all times

What to do if a Marine Mammal Approaches the Vessel

Option 1

Reduce its speed and, if possible, cautiously move away from the animal

Option 2

if it is not possible for the ship to move away from or detour around a stationary marine mammal or group of marine mammals, the ship will reduce its speed and wait until the animal(s) move to the side and remain at least 100 m (Meliadine) or 500 m (Meadowbank)

Option 3

If animals appear to be trapped or disturbed by ship movements, the ship will mitigate disturbance (e.g., stoppage of movement) until the animal(s) has moved away

* The two projects have slightly different guidance on setbacks:

Meadowbank – Maintain 500 m away from feeding marine mammals and aggregations of seabirds and marine mammals

Meliadine – Maintain 300 m from feeding marine mammals.

Meliadine – Maintain 100 m away at all times.

ATTACHMENT C MARINE MAMMAL ID GUIDES

COMMON WHALE ID GUIDE

Narwhal

Size: 4 - 5 m

Body: Small head, stocky body, short/round flippers, tusk

Dorsal Fin: No

Colour: Mottled black and white, grey or brownish

Beluga

Size: 4 - 5 m

Body: Stout body, small head, short, broad paddle-shaped flippers

Dorsal Fin: No

Colour: Adults white, calves brown/grey

Bowhead Whale

Size: up to 19 m

Body: Large and rotund

Dorsal Fin: No

Colour: Black/brown, white lower jaw

Blow: Bushy V-shaped

Fluke: Shows fluke when diving

Fin Whale

Size: up to 23m

Body: Streamlined and long

Dorsal Fin: hooked

Colour: Grey body, white lower jaw right-side only

Blow: Tall and straight

Fluke: Rarely shows fluke

Orca/Killer Whale

Size: 7-9 m

Body: Long rounded body

Dorsal Fin: Tall dorsal fin

Colour: Black-and-white, saddle patch (grey area) behind dorsal fin, white underside

COMMON PINNIPED ID GUIDE

Walrus

Size: 2.5 - 3m

Body: large, blubbery, long tusks

Head: Large thick neck, dark mouth with whiskers

Colour: Dark brown

Harbour Seal

Size: 2m

Body: Medium size, spindle shaped body

Head: like dog, heart-shaped snout

Colour: Blue-grey with dark spots/speckles

Hooded Seal

Size: 2.5 m

Body: Large, robust

Head: Broad head short narrow snout, males of "hood" they inflate

Colour: Black head, silver/grey fur, dark patches

Harp Seal

Size: 1.5 - 2 m

Body: Medium size, robust

Head: Small head, pointy snout

Colour: Light grey, harp-shaped black patch on back, black face

Bearded Seal

Size: 2 - 2.5 m

Body: Large, robust

Head: Small head, short snout, long whiskers

Colour: Dark brown/grey with dark rings/spots

APPENDIX C SEABIRD MONITORING SOP

Meadowbank and Meliadine Projects

Seabird Monitoring

STANDARD OPERATING PROCEDURE

SHIP-02

14 June 2022

Version C.1

Scope of Work: This SOP provides guidance for seabird monitoring procedures for shipping companies contracted by Agnico Eagle. Monitoring is conducted to avoid potential effects to seabirds. The shipping companies are required to record seabird observations based on the protocols outlined in this SOP along the shipping route between Hudson Strait and Helicopter Island/Rankin Inlet.

1. PROGRAM DESCRIPTION AND OBJECTIVES

A Seabird Monitoring Standard Operating Procedure (SOP) has been developed to guide onboard monitoring for seabirds. This SOP satisfies the Meadowbank Mine NIRB Project Certificate No. 008 Condition 40 and the Meliadine NIRB Project Certificate No.006 Condition 82.

The purpose of this SOP is to identify the monitoring and mitigation procedures for shipping companies contracted by Agnico Eagle to avoid potential effects to seabirds, as per the Marine Mammal and Seabird Monitoring (MMSO) program. This document outlines the following:

- How to avoid or adjust shipping speed near sensitive wildlife habitat along shipping routes;
- How to record observations of seabirds;
- Potential mitigation if large groups of seabirds are observed;
- How to record and report mitigation measures taken, if applicable; and
- How to record and report ship strikes of seabirds, if they occur.

Agnico Eagle will update this SOP as necessary, in response to feedback from Environment and Climate Change Canada (ECCC) or in response to data collected in the field or scientific advances.

2. SEABIRD MONITORING

2.1 Overview

The following protocol will be implemented during the Marine Mammal and Seabird Observer (MMSO) program:

- A minimum of one assigned MMSO will be present on-board vessels during all transits;
- The MMSO will conduct seabird observations along the shipping route from the bridge during daylight hours and record sightings into the *Seabird Sightings Form* (Attachment A); and
- The shipping contractor will initiate mitigation measures designed to minimize Project impacts on seabirds, as identified in the Marine Shipping Mitigation Summary Booklet (e.g., remain 500 m from bird colonies on land, remain 2 km from Marble Island, remain 500 m from large aggregations of seabirds on water).

2.2 Training

The captain is responsible to assign an MMSO to the bridge, and to ensure that the MMSO has been trained to identify marine mammals and seabirds.

Training for the assigned MMSOs includes:

- The pre-trip training live webinar, or review of the recorded webinar prior to beginning the MMSO duties. The recorded webinar will also be available on the ship for review as needed;
- Review the Seabird Monitoring SOP (this document), the Marine Shipping Mitigation Summary Booklet, and the Marine Mammal Monitoring SOP (SOP #SHIP-01);
- Review how to fill out the *Seabird Sightings Form* (Attachment A) and the *Marine Mammal and Seabird Observer (MMSO) Incident Report Form* (Attachment B);
- Review seabird identification, including common species provided in Attachment C; and
- Know how to estimate distances to animals observed.

2.3 Equipment Checklist

Bridge staff participating in wildlife monitoring will require the following:

1. This SOP;
2. *Seabird Sightings Form* (Attachment A);
3. Seabird ID Guide (Attachment C);
4. *MMSO Incident Report Form* (Attachment B);
5. Binoculars;
6. GPS (only required if unable to get GPS coordinates from the ship); and
7. Clipboard and pencil.

2.4 Seabird Monitoring Methods

Seabird surveys are required along the shipping route from Hudson Strait to Helicopter Island/Rankin Inlet, and during the return journey from Helicopter Island/Rankin Inlet through Hudson Strait (Figure 2.4-1). Surveys must be conducted a minimum of once daily, but three times per day is preferred.

General environmental and seabird sightings information is to be collected and recorded by filling out the *Seabird Sightings Form* (Attachment A). The protocol outlined in this section are best conducted along a transect line, therefore, it is best to start a seabird observation period when the vessel is and will be moving in a straight line for an extended period of time.

2.4.1 Observation Period

- Seabird monitoring is required from Hudson Strait to Helicopter Island (Meadowbank) or Rankin Inlet (Meliadine), along the shipping route presented in Figure 2.4-1.
- Conduct three surveys per day, when possible: one morning, one afternoon, and one evening.
- Each seabird survey period will be conducted during **six consecutive five-minute periods** (total of 30 minutes each session). Take a short break at the end of each five-minute period to record the vessel's position and any conditions (ship speed, direction, weather, etc.) that may have changed since the last five-minute survey period.
- Each five-minute survey should be dedicated to surveying for seabirds only and should be completed regardless if birds are present or not.
- If possible, attempt to prioritize conducting surveys around Coats Island, when passing near the shore entering Hudson Bay, and/or approaching Helicopter Island/Rankin Inlet.
- If the vessel is moving (preferred), use methods in Section 2.4.3; if vessel is not moving (stationary), use the methods in Section 2.4.4 below.
- For each observation period, document information on the ship's location, travelling speed and direction, environmental conditions on a *Seabird Sightings Form* (one form per observation period).

2.4.2 Observer Position

- Observations should be done from a high location on the vessel, when possible, at a location as close to the port or starboard edge of the platform as possible to increase the detection of seabirds.
- All surveys should be conducted at the same location each time.

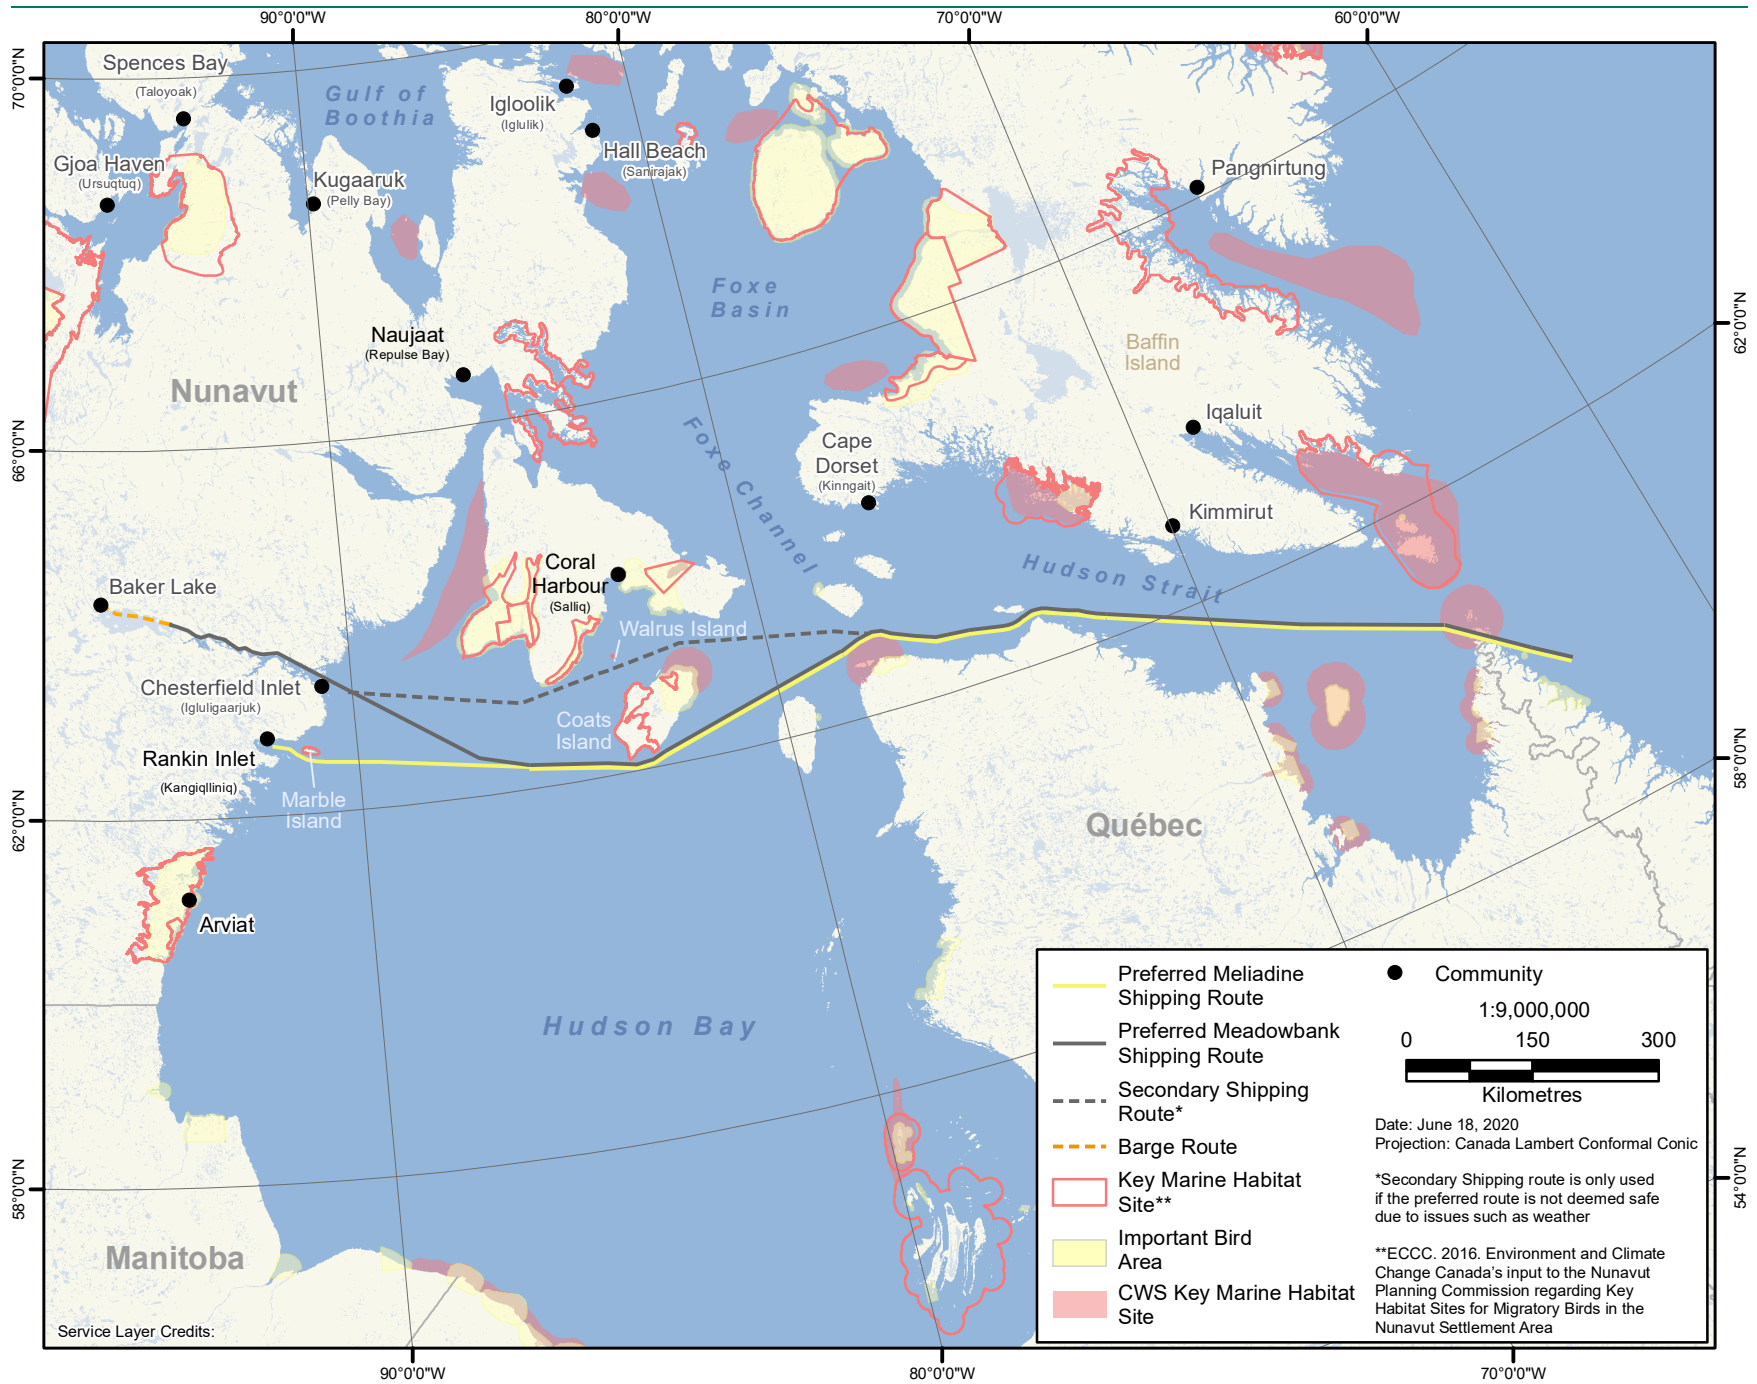

Figure 2.4-1: Shipping Routes during the Open Water Season

2.4.3 Survey Methods – Moving Vessel

- Conduct 1 to 3 dedicated surveys per day
- Each survey lasts 30 min, made up of **6 separate 5-min observation periods**, beginning in Hudson Strait (see Figure 2.4-2).
- Look forward from the side of the vessel, scanning at a 90° angle from either the port or starboard side depending where the observer is located.
- The transect width within which seabirds are recorded is 300 m from the side of the vessel (see Figure 2.4-3).
- Begin all five-minute surveys by conducting a snapshot survey of birds in flight – i.e., an initial count of all birds seen flying (Section 2.4.3.1).
- Scan ahead regularly (e.g., every minute) to spot birds that may dive as the vessel approaches.
- All birds observed within the 300 m transect, whether flying or on the water, or on sea ice or land, are recorded and are considered in-transect sightings. (Figure 2.4-3).
- Use Figure 2.4-3 (A to E, or T) to record the distance to each bird or flock of birds (to the center of the flock). Ensure to record birds/group of birds only once.
- Birds observed outside the 300 m transect are also recorded if this does not affect observations within the 300 m transect. Distance categories “E” and “T” in Figure 2.4-3 are both considered not in transect.
- Binoculars and spotting scopes can be used to confirm species identification and other details as necessary.
- When a survey period cannot be done because of poor visibility (i.e., when the entire width of the 300 m transect is not visible), the extent of visibility should be noted on the *Seabird Sightings Form*.
- If no birds are observed during a five-minute survey period, “no seabirds observed” must be noted in the “Notes” on the *Seabird Sightings Form*.
- For each observation period crew will document information on the ship’s location, travelling speed and direction, environmental conditions and the details of the wildlife observation (species, behaviour, distance from ship, etc.) on a *Seabird Sightings Form*.
- Attachment C (Common Seabird ID Guide) summarizes general species groups and individual species that are most likely to be observed and is meant to provide a cheat-sheet for only the most common species – other species may occur and Bird ID book can be used. Note that recording a general species group or “unknown species” with a description of the bird in the comments column is better than an incorrect species identification.
- When possible, take photographs of seabird sightings and record the photo name/number alongside sightings records. These photos must be provided to Agnico Eagle along with the completed datasheets
- Ensure no cell on the *Seabird Sightings Form* is left blank.

**Timeline to Complete One 30-Minute Survey
Using 6 Observations Periods Lasting 5-Minutes**

Figure 2.4-2: Seabird Survey Methodology using Six Consecutive 5-Minute Observation Periods

Distance Categories

Extracted from Gjerdrum et al. 2012

Figure 2.4-3: Average Proportion of Each Behaviour Type Observed Among at the Start of the Survey.

2.4.3.1 Tips for Recording Birds

If the species of seabird cannot be identified, please ensure to indicate the species group (e.g., gull, puffin-like seabird) as described in the Common Seabird ID Guide (Attachment C), and provide a description of the bird in the comments column of the *Seabird Sightings Form*.

Birds on the Water

- All birds observed on the water are recorded throughout the five-minute survey period. If birds in the transect fly off the surface of the water as the vessel approaches, use binoculars to help count them, and record these birds as being on the water. Ensure not to record twice as flying birds during a snapshot survey.

Large Groups of Birds

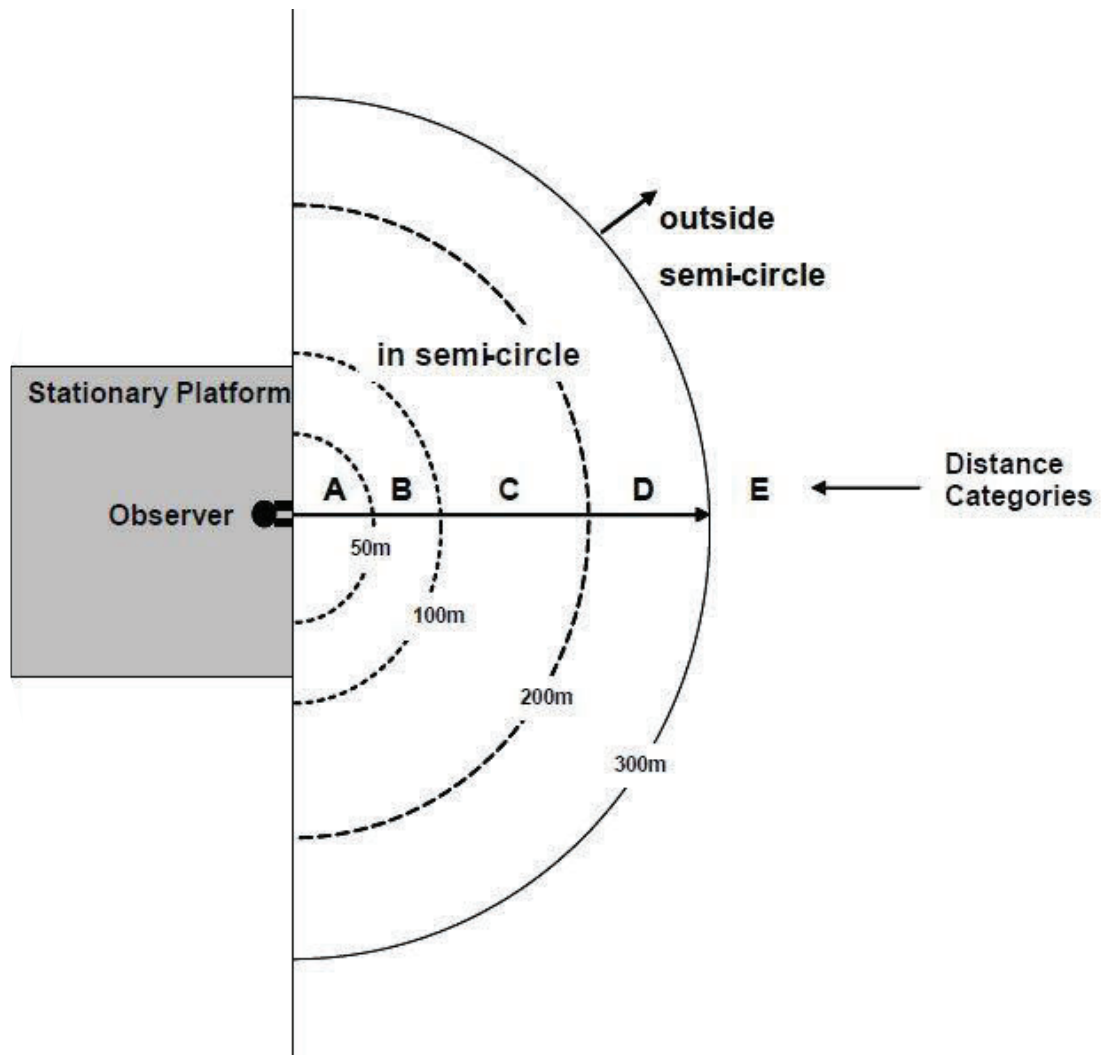

- If it is not practical to estimate distance to each bird or flock of birds, record whether the birds were observed in or out of transect. If it is not practical to note which birds are on the water and which are in flight use the following guidelines:
 - If the majority of the birds are in the air, they can be recorded as flying.
 - If birds appear first on the water and then fly away as the vessel approached, or they continuously move between the water and air, recorded them being as on the water.

Birds that Follow the Vessel

- To avoid double counting birds, once a bird is recorded in-flight it is not subsequently recorded again if it follows the ship.

2.4.4 Survey Methods – Stationary Vessel

- If the vessel is stationary (e.g., anchored) for a day or portion of a day, then a seabird survey will be required while anchored to ensure the minimum of one survey per day is met.
- Surveys when the vessel is stationary are conducted from the bow (front) of the vessel.
- The length of each scan will depend on the number of birds present at the time of the scan (e.g., it may only last a few seconds if there are no birds present).
- Surveys while the vessel is stationary (e.g., on standby or anchored) are done using counts of birds within a 300 m “semi-circle” area from the vessel, scanning through a 180° arc (Figure 2.4-4).
- All seabirds on water and in flight that are observed within 300 m are recorded. If seabirds are visible beyond 300 m, they are recorded as outside of the 300 m semi-circle.
- The distance to seabirds (inside and outside the 300 m area) from the observer is estimated and recorded for all birds, using Figure 2.4-4 (A to E).
- Binoculars and spotting scopes can be used to confirm species identification and other details as necessary.
- If no birds are observed during the survey, “no seabirds observed” must be noted on the *Seabird Sightings Form*.

Figure 2.4-4: Seabird Survey Using an 180° Scan from the Bow, Surveying an Area 300 m from a Stationary Observer

2.5 Incidental Seabird Sightings – “Off Effort”

During sailing between Hudson Strait and Helicopter Island/Rankin Inlet, the ship’s crew is required to keep watch for groups of seabirds along the shipping route. This is in addition to the MMSO dedicated surveys. Whenever a group of seabirds is observed outside of the dedicated survey time, this is called an incidental sighting, or “off-effort” sighting. These sightings are recorded on the *Incidental Marine Wildlife Sightings Form* (Attachment D) and provided to Agnico Eagle for reporting. This includes sightings of large groups of seabirds on water, colonies of seabirds on land, or large flocks of seabirds flying.

If an incidental sighting is close to the vessel and requires mitigation measures, or if a ship strike occurs, refer to Section 3 of this SOP and complete the *MMSO Incident Report Form* (Attachment B).

3. MITIGATION AND REPORTING

In the event bridge crew observe large groups of seabirds requiring mitigation or management measures, recommended responses are outlined in Table 3-1. Mitigation responses will be documented on the *Seabird Sightings Form* in the “Comments” column for that observation.

Table 3-1: Recommended Shipping Mitigation Responses for Seabirds

Observation	Management Response
Seabirds	
Marble Island	2 km
Colonies and aggregations of seabirds (on water or land) during Project shipping transiting through Hudson Strait, Hudson Bay, and Chesterfield Inlet	500 m setback

If bridge crew determine a ship strike of a group of seabirds has occurred, they will complete the *MMSO Incident Report Form* (Attachment B), and indicate on the *Seabird Sightings Form* that the observation was the result of a ship strike.

All records of bird collisions will be provided to Canadian Wildlife Service (CWS) on a weekly basis, as vessel communications allow (i.e., as internet connections allow). Immediate reporting will be required in the event that multiple bird collisions occur (involving more than five individuals) and the incidents appear related (i.e., similar time period, location, and weather conditions). In this instance, the regional Environment and Climate Change Canada (ECCC) Wildlife Enforcement Officer (contact information provided below) will be contacted to provide advice on the implementation of adaptive management techniques to attempt to reduce the likelihood of collisions occurring in the future.

If a seabird and vessel collision occurs, contact:

- CWS, Jean-Francois Dufour: jean-francois.dufour2@Canada.ca
- ECCC Wildlife Enforcement: ec.dalfnord-wednorth.ec@canada.ca

4. END OF TRIP REPORTING REQUIREMENTS

The following information will be submitted to the Agnico Eagle Environment Team (contact information provided at the top of this SOP) after each shipping trip for collation into a database:

1. Spatial file of the shipping route;
2. Completed *Seabird Sightings Forms*;
3. Completed *MMSO Incident Report Form* (if required); and
4. Photographs taken of sightings.

ATTACHMENT C COMMON SEABIRD ID GUIDE

COMMON SEABIRD ID GUIDE

Small Seabirds

Red Phalarope

Size: L 8.5" WS 17" WT 1.9 oz (55 g)

Body: Very small, shorebird-like seabird

Red-necked Phalarope

Size: L 7.75" WS 15" WT 1.2 oz (35 g)

Body: Very small, shorebird-like seabird

Puffin-like Seabirds

Atlantic Puffin

Size: L 12.5" WS 21" WT 13 oz (380 g)

Body: Small, stocky, bright bill, black and white plumage

DCs:

- Colourful bill
- Black band around neck while flying

Razorbill

Size: L 17" WS 26" WT 1.6 lbs

Body: Medium, long tail, black and white plumage

DCs:

- Large, thick bill
- Long- pointed tail
- Dark rump

Thick-billed Murre

Size: L 18" WS 28" WT 2.1 lbs

Body: Medium, stocky; black and white plumage

DCs:

- Short bill
- Pure white belly
- Larger head than Common

COMMON SEABIRD ID GUIDE

Long-winged Seabirds

Northern Fulmar

Size: L 18" WS 42"
WT 1.3 lbs

Body: Large, stocky and thick-necked

Gulls

Herring Gull

Size: L 25" WS 58" WT 2.5 lbs

Body: Large, white-headed

DCs:

- Medium grey back
- Black and white wing tips

Iceland Gull

Size: L 22" WS 54" WT 1.8 lbs

Body: Medium, white-headed

DCs:

- Light- great back
- No or less dark marks on wing tips

Glaucous Gull

Size: L 27" WS 60" WT 3.1 lbs

Body: Large, white-headed

DCs:

- Light- great back
- White wing tips

Black-legged Kittiwake

Size: L 17" WS 36"
WT 14 oz (400g)

Body: Small, white-headed

DCs:

- Black legs
- Solid yellow bill
- Black tipped wings

Gull-like Seabirds

Long-tailed Jaeger

Size: L 15" WS 43" WT 11 oz (300 g)

Body: Medium, Slender gull-like seabird

DCs:

- Very long tail
- State grey back, dark cap
- No chest band

Parasitic Jaeger

Size: L 16.5" WS 46" WT 1 lb

Body: Medium, Slender gull-like seabird

DCs:

- Dark back and wings; dark cap
- Pale chest with weak dark band
- Longer tail

Pomarine Jaeger

Size: L 18.5" WS 52" WT 1.5 lbs

Body: Medium, heavy body, broad wings

DCs:

- Dark back and wings; dark head
- Pale chest with dark band

COMMON SEABIRD ID GUIDE

Sea Ducks

Greater Scaup

Size: L 18" WS 28" WT 2.3 lbs

Body: Medium; black and white duck (male)

Common Eider

Size: L 24" WS 38" WT 4.7 lbs

Body: Large; wedge-shaped head, mainly white face, neck and back (male)

Long-tailed Duck

Size: L 16.5" WS 28" WT 1.6 lbs

Body: Small; round body, dark wings, distinctive patterns and long tail (male)

Loons

Common Loon

Size: L 32" WS 46"
WT 9 lbs

Body: Very large; thick body, boldly patterned back and neck; heavy bill

DCs:

- Black head and bill
- Black and white pattern on back
- White chest and belly

Sea Ducks/Seabirds

Surf Scoter

Size: L 20" WS 30" WT 2.1 lbs

Body: Medium; dark-bodied sea duck; large multicoloured bill (male)

Red-breasted Merganser

Size: L 25" WS 34" WT 2.3 lbs

Body: Large; thin-billed, black, tufted-head, white neck (male)

Black Guillemot

Size: L 13" WS 21"
WT 15 oz (430g)

Body: Small; chunky, black body, white wings

Red-throated Loon

Size: L 25" WS 38"
WT 3.1 lbs

Body: Large; smaller, slender body, short neck compared to Common

DCs:

- Grey head and back
- Rust coloured throat
- White chest and belly

ATTACHMENT D INCIDENTAL MARINE WILDLIFE SIGHTINGS FORM

AGNICO EAGLE

Incidental Marine Wildlife Sightings Form

**APPENDIX G SEABIRD DISTANCE ANALYSIS: TOP THREE AIC-RATED
DISTANCE MODELS, MOVING VESSEL SURVEYS**

Year	Model Key and Adjustment	Detection Estimate	Detection SE ¹	Δ AIC ²
All Years	Uniform with cosine adjustment	0.419	0.023	0
	Hazard-rate	0.439	0.015	4.389
	Half-normal	0.482	0.009	82.946
2019	Hazard-rate with cosine adjustment	0.426	0.056	0.000
	Half-normal with cosine adjustment	0.467	0.041	4.762
	Hazard-rate, no adjustment	0.418	0.072	12.705
2020	Hazard-rate with cosine adjustment	0.337	0.033	0.000
	Half-normal with cosine adjustment	0.321	0.031	1.093
	Hazard-rate, no adjustment	0.356	0.046	2.839
2021	Hazard-rate, no adjustment	0.425	0.021	0.000
	Half-normal with cosine adjustment	0.416	0.031	2.072
	Uniform with cosine adjustment	0.405	0.016	2.461
2022	Hazard-rate with cosine adjustment*	0.500	0.2574	0.000
	Hazard-rate with polynomial adjustment*	0.500	0.2574	0.000
	Hazard-rate with no adjustment*	0.500	0.2574	0.000

Notes:

¹ Standard Error (SE).

² Akaike's Information Criteria (AIC), presented as the relative difference in ranking model fit. The lowest value is the best fit model.

* The top three models in 2022 were all hazard-rate models with differing adjustment terms. These models all shared detection estimate and AIC values.

ERM has over 160 offices across the following countries and territories worldwide

Argentina	The Netherlands
