Prepared by: Exploration Division and Meadowbank Environment Department

Approved by:

Eric Haley

Superintendent of Environment and Critical Infrastructures

#### SECTION 1. ADDENDUM ANNUAL REPORT

As part of this addendum, the information provided relates the 2022 exploration activities as requested by NIRB Screening Decision #11EN010.

Agnico Eagle Mines Limited's Meadowbank Exploration camp is located near Third Portage Lake adjacent to KM 100 on the all-weather access road (AWAR) between the hamlet of Baker Lake and the Meadowbank mine site. In 2014, trailers located at the Meadowbank exploration camp were prepared for transport over the winter access to the Amaruq site. These were moved in early 2015. The remaining infrastructure at the Meadowbank Exploration Project camp remains in place and is still used to support exploration activities in the vicinity.

Agnico Eagle Mines Limited's Amaruq Exploration Project is located 50 kilometres (km) North-West of its Meadowbank Gold Mine in Nunavut. The intent of the Exploration Project is to explore its mineral lease and claims for potential ore deposits. Diamond drilling is being used in exploring promising areas on the mineral properties. The Amaruq Exploration Camp was initially planned to be relocated in 2020, but this project was postponed.

#### Annual report

- 1. The Proponent shall include within its annual report for the Meadowbank Gold Project (NIRB File No. 03MN107), a comprehensive annual report of the activities undertaken as authorized by the Board for File No. 11EN010 to date. The annual report must contain at least the following information:
- a. A summary of activities undertaken for the year, including:
  - i. a map showing the approximate location of drill sites;

In 2022, 178 holes were drilled by Agnico Eagle Mines on the Amaruq property, and 17 holes were drilled on the Meadowbank property (see Figure 1-1). All drilling areas were managed in such a manner as to reduce the environmental footprint to a minimum. Cuttings generated by drilling are disposed of at a distance of at least 31 meters from a water body where a direct flow to the water is not possible. When drilling on ice, the cuttings generated are also disposed of at a distance of at least 31 meters from a water body using pumps and sludge lines or using settling tanks and transport. Once drilling is completed, the casing is then removed or cut off at ground level.

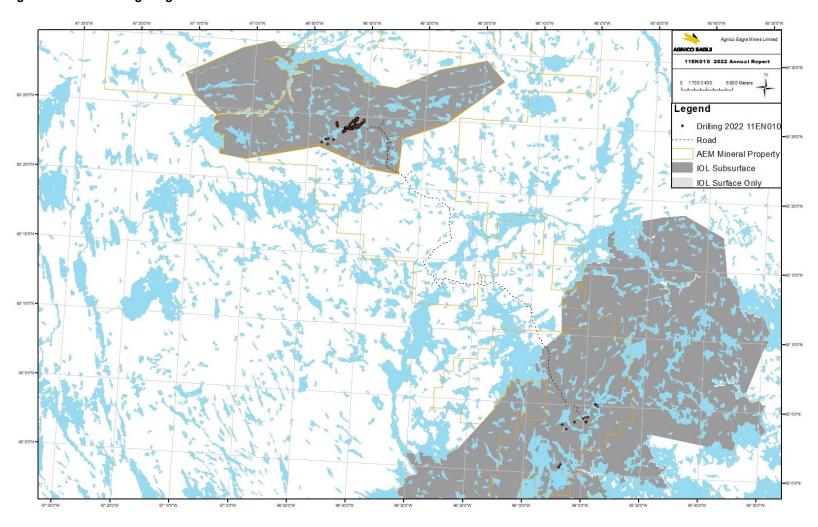

Figure 1-1: 2022 Drilling Program Locations under 11EN010

#### ii. a map showing the location of the fuel cache;

In 2022, Agnico Eagle Mines Limited's Exploration division has only one fuel storage locations related to the NIRB decision #11EN010. The fuel cache was located at the Meadowbank exploration camp and consist of four (4) tanks with a total capacity of 130,500 liters and drum stored in three (3) seacans for diesel and jet fuel. For the Amaruq exploration activities, fuel and jet fuel were supplied by the mine operations fuel farm.

#### iii. site photos;

Figure 1-2 Aerial photo of Whale Tail and IVR Pits (Summer 2022)

Figure 1-3 Aerial photo showing Whale Tail camp infrastructure (Summer 2022)

# b. A work plan for the following year, including any progressive reclamation work undertaken;

#### **Amaruq**

- Amaruq exploration activities are planned to be based from the Whale Tail Camp site.
- Exploration drilling to run between February and November.
- Prospecting, mapping and geophysical surveying could be conducted on the entire property during the summer period.

#### Meadowbank

- Most of the Meadowbank exploration camp was transported to Amaruq in 2015. The area and remaining infrastructures are used to support exploration activities in the vicinity.
- Drilling is planned between February to September with one drill in operation.
- Prospecting, mapping and geophysical surveying could be conducted on the entire property during the summer period.
- c. A summary of community consultations undertaken throughout the year, providing copy of materials presented to community members, a description of issues and concerns raised, discussions with community members and advice offered to the company as well as any follow-up actions that were required or taken to resolve any concerns expressed about the project proposal;

In 2022, eight (8) exploration-related community engagement activities were conducted:

- February 16<sup>th</sup> One (1) in-person meeting with Elders from Baker Lake concerning community mapping and for signs to be installed on the AWAR for traditional place names or areas of interest.
- February 17<sup>th</sup> One (1) in-person consultation with the Baker Lake HTO to finish community mapping and provide translated version prior to sharing.
- March 28<sup>th</sup> One (1) site visit to the Whale Tail Mine with the Baker Lake Elders and one
   (1) pre-consultation to identity different concerns.
- April 4<sup>th</sup> One (1) in-person public meeting with Baker Lake community to provide an update on exploration activities.
- April 18<sup>th</sup> One (1) in-person meeting with Baker Lake HTO, Elders, berry harvesters and Baker Lake Hamlet to present an update of the drilling program.
- July 8<sup>th</sup> One (1) in-person meeting with the Chesterfield Inlet SAO, the mayor, and the economic development coordinator to provide an update on Meadowbank Complex activities, including exploration activities. The application to extend the life of mine (LOM) was also shared. One (1) in-person meeting with the Chesterfield Inlet HTO to discuss the

- possible end of life of mine (LOM) of Meadowbank Complex and share the extension program. The NIRB process and the possible closure in 2026 were also discussed.
- July 13<sup>th</sup> One (1) in-person meeting with the Baker Lake mayor, the SAO and Public
  works from Baker Lake. The exploration team presented the summer drilling campaign and
  explained the types of drilling activities. Impacts to snow mobile trails were also discussed.
- October 18<sup>th</sup> One (1) in-person meeting with the Kivalliq Mayors, SAO and GN Officials.
   The exploration team presented what is exploration, project lifecycle, training opportunities, and role to help find more gold at Amarug and Meadowbank.
- d. Summary of the consultation conducted with Government of Nunavut biologists if any and any relevant outcomes including revisions or alterations to the timing of project activities:
  - This information was included in the application submitted to the NIRB related to the
    construction of the road and since the new NIRB decision was received, on November 4<sup>th</sup>,
    2015, no new information in regard to exploration permitting is added.
- e. Summary of follow-up consultation with Fisheries and Oceans Canada (DFO) regarding the final construction designs and documents requested by DFO and any recommendations issued by DFO. The summary should include a summary of all available best management practices.
  - Agnico Eagle received on March 14, 2016 the Letter of Advice 11-HCAA-CA7-00006 for the construction of the Amaruq Exploration Access Road (AEAR). In 2016, all works along the road were in accordance with DFO recommendation regarding the blasting and in water work. The road between Meadowbank Mine Site and Amaruq property is no longer considered as an exploration road but rather as the Whale Tail Haul Road.
  - The AEAR was inspected regularly during construction and especially during freshet season with a dedicated resource able to log and deploy measures, if needed, consistently during the year. This practice has remained upon shifting to the Haul road and adaptive management used, when needed, to prevent any issues.
  - In July 2018, Agnico received the Fisheries authorization 16-HCAA-00370 for the construction of the Whale Tail Mine.
  - In July 2020, Agnico received the Fisheries authorization 20-HCAA-00275 for the Whale Tail Expansion Mine.

# f. A discussion of issues related to wildlife and environmental monitoring, including the number of cease-work orders required as a result of proximity to caribou;

- For information purpose, wildlife and environmental monitoring along the Whale Tail Haul Road can be found in the 2022 Annual Report submitted under the NIRB Project Certificate 004 and 008.
- For the Whale Tail and Meadowbank sites, Agnico will refer to the 2022 Annual Report submitted under the NIRB Project Certificate 004 and 008 for a complete review of the environmental monitoring conducted in 2022.

#### g. An analysis of the effectiveness of mitigation measures for wildlife;

- Wildlife monitoring is an essential tool in protecting and maintaining wildlife occurring near the project. A comprehensive monitoring strategy, along with quantitative monitoring indicators, has been implemented and, as required, is adapted to evaluate the accuracy of impact predictions and to meet the objectives of the management strategy set out in the TEMP. Monitoring programs evaluate the effectiveness of mitigation measures and assess mine-related impact predictions. For all wildlife monitoring programs there is a certain level of uncertainty or unpredictability; therefore, residual effects identified during monitoring may require implementation of adaptive management strategies. Adaptive management is an ongoing process that evolves throughout the life of the project as better and more effective ideas are introduced in a process that is designed to be continually improving. Ongoing review of the TEMP, regulars meeting with the TAG and annual Wildlife Monitoring Summary Reports (which provide results of TEMP monitoring programs) by regulatory agencies, technical reviewers, and stakeholders will further ensure that local and regional concerns have been adequately addressed.
- Environmental staff monitor wildlife near mine facilities (i.e., Meadowbank Mine and Whale Tail Mine) and along the AWAR, and Whale Tail Haul Road on a regular basis. Where unacceptable risks to wildlife are observed, mitigation measures are implemented to avert animals from site activities in accordance with the TEMP. Detailed reporting protocols (e.g., a dangerous animal occurrence, monthly wildlife reports submitted to the GN and KivlA, road closure notification to GN, KivlA, HTO, etc.) are established and implemented by onsite environmental staff. During these events, Agnico Eagle representatives communicate any issues directly with the GN Department of Environment (DoE) Conservation Officer, KivlA, and the local HTO.
- Agnico will refer to the 2022 annual Wildlife Summary Monitoring Report for a complete review of the environmental monitoring conducted in 2022. This report can be found as an appendix of the 2022 Annual Report submitted under NIRB Project Certificate 004 and 008.

# h. A brief summary of Wildlife Monitoring and Mitigation Plan (WMMP) results including the wildlife log and record of observations as well as any mitigation actions that were undertaken:

The 2022 Wildlife log for the Meadowbank and Whale Tail Mines is presented in 2022 Wildlife Summary Monitoring Report. Agnico will refer to the 2022 Wildlife Summary Monitoring Report found as an appendix of the 2022 Annual Report submitted under NIRB Project Certificate 004 and 008. This information is submitted on a monthly basis to the KivIA and GN.

#### i. Summary of any heritage sites encountered during the project activities and any followup action or reporting required as a result. The summary should include a map noting the sites encountered; and,

Archaeological assessment in 2022 was conducted for twenty (20) exploration areas within the vicinity of the Meadowbank Mine. These locations are listed below (north to south):

- GoT Ext 1, GoT Ext 2, GoT Ext 3
- Anuri East of Donna
- Tiriaq West of Farside Lake, Longroot South
- Crown North, Crown South, Crown Island, Grizzly Ext 2
- UM Ext 2, Tern East, Tern West
- Piniartoq Ext 1, Sheba Ext 1, Sheba Ext 2, Sheba Ext 3, JAN Ext 1
- Dingo, Dingo Ext 1

Each of these 20 areas were fully subject to helicopter assessment followed by ground inspection on foot of areas with moderate to high potential to contain archaeological sites. Ground coverage was undertaken by a crew of two archaeologists in June/July and September of 2022. These field studies were intensive and intended to represent full impact assessment coverage relative to archaeological sites. No areas with significant deposition (such as floodplain deposits along major watercourses) were identified that warranted shovel testing.

Agnico Eagle has submitted to the GN Cultural and Heritage department the 2022 Archaeological Site Status Report. This report and the information contained in it are confidential and therefore were submitted directly to the GN Cultural and Heritage department. Requests for information should be made directly to the GN.

j. A summary of how the Proponent has complied with conditions contained within this Screening Decision, and all conditions as required by other authorizations associated with the project proposal.

- For the Amaruq exploration site, Agnico Eagle maintains all authorizations to conduct its exploration activities. These authorizations include a water licence with NWB and exploration land use licenses with KivIA. Annual reports have to be submitted for each of these authorizations. Please refer to the Agnico Eagle 2022 Annual Reports for a completed review of the 2022 activities under these licenses and permits.
- An amendment application was submitted to NWB to request a change in location of the Amaruq exploration camp under Water Licence 2BB-MEA1828. As of March 26, 2020, this amendment was approved. The exploration camp has not been reinstalled at this date.
- In addition to the amendment to NWB Water Licence 2AM-WTP1826, Agnico Eagle also submitted an application to transfer Whale Tail underground development activities, operation of the A-P5 (which will be converted into GSP-1 for the Expansion Project) and handling and storage of waste rock and ore on pads, and a few other associated activities from the NWB Water Licence 2BB-MEA1828 to the NWB Water Licence 2AM-WTP1826. As of March 27, 2020, this amendment was approved, and activities associated with the underground development are included in the new Water Licence 2AM-WTP1830.

#### k. Summary of traffic travelling via the road between Meadowbank and Amarug.

- The Whale Tail Haul Road is now included in the NIRB Project Certificate 008. Please refer to the 2022 Annual report for a complete review of the traffic data for 2022.
- Road traffic data along the Whale Tail Haul Road for 2022 can be found in Table 1-2.

Table 1-2: 2022 Whale Tail Haul Road Traffic Data

2022	Long Haul	Medium Equipment	Light Equipment	Total
January	1944	163	278	2385
February	3890	194	272	4356
March	4316	257	254	4827
