
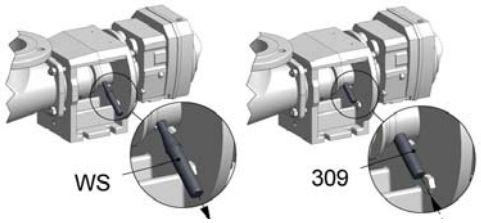
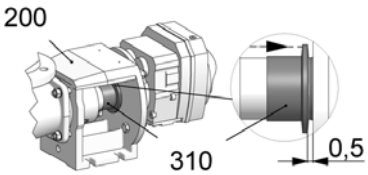
- Remove tool **(WS)**.
- Slide in plug-in shaft pin **(309)**.

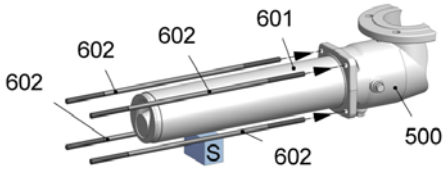


- Pay attention to the position of the splash ring **(310)**.
- Insert the splash ring collar at a distance of 0.5 mm from the lantern **(200)**.

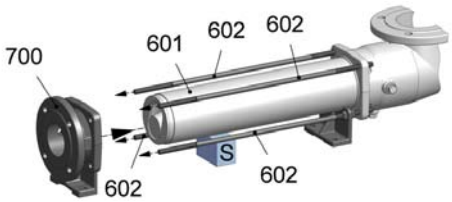


9.1.3.6 Pressure branch (700) - Reassembly

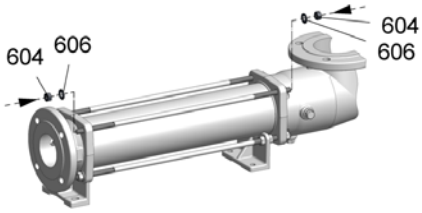
- Prop up stator **(601)** with a support **(S)**.
- Insert tie bolts **(602)** loosely into the suction casing **(500)**.



- Push pressure branch **(700)** on to the stator **(601)**.
- Insert tie bolts **(602)** loosely in the pressure branch **(700)**.
- Remove the support **(S)**.



- Mount screw fitting **(604, 606)**.
- Tighten tie bolts **(602)** equally.



9.2 Rotating unit individual parts

9.2.1 Dismantling

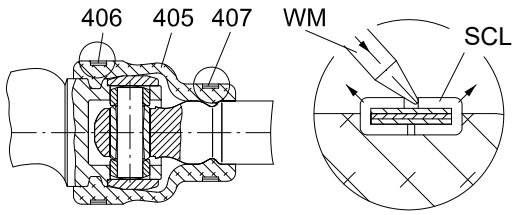
9.2.1.1 Holding band (406, 407) - dismantling

CAUTION

Risk of injury.
Possibility of parts spinning out.

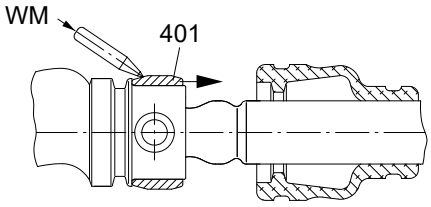
- Wear protective goggles.

- Detach holding band loop (SCL).
  - Use suitable tool (WM).
- Push out parts of holding band loop (SCL).
- Remove holding band (406, 407).
- Pull back universal joint sleeve (405).



9.2.1.2 Retaining sleeve (401) - dismantling

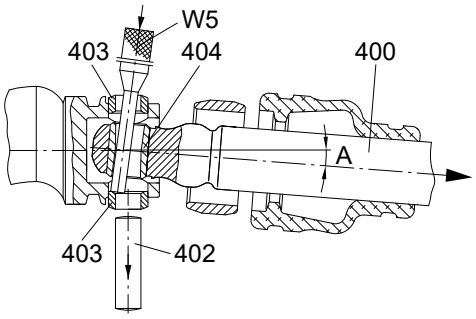
- Knock back retaining sleeve (401).
  - Use suitable tool (WM).



9.2.1.3 Detach joint

Tool (W5/drift)

- Eject coupling rod pins (402).
- Bend (A) the coupling rod (400). Knock guide bushing (403) out with tool (W5).
- Remove coupling rod (400).



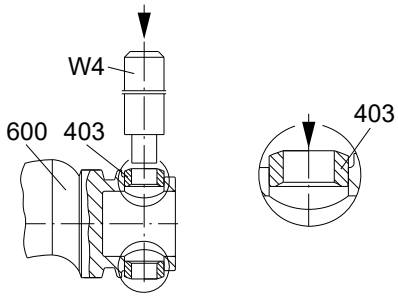
9.2.2 Rotating unit (RTE) - prepare individual parts for reassembly

9.2.2.1 Rotor (600)

- ➢ Remove any damage.
- ➢ Clean the rotor (600).

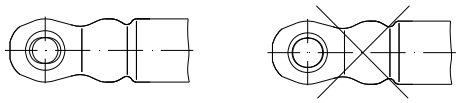
Tool (W4/assembly mandrel)

- ➢ Press in the guide bushing (403) (depth = 2/3).
  - – Use tool (W4).



9.2.2.2 Coupling rod (400)

- ➢ Clean the coupling rod (400).
- ➢ Examine bore head for wear.
  - – If wearing is detected on the bore head, replace the coupling rod (400).

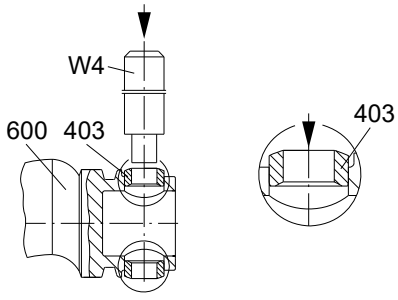


9.2.2.3 Plug-in shaft (307)

- ➢ Remove any damage.
- ➢ Clean the plug-in shaft (307).

Tool (W4/assembly mandrel)

- ➢ Press in the guide bushing (403) (depth = 2/3).
  - – Use tool (W4).



9.2.3 Rotating unit (RTE) - individual parts - reassembly

NOTICE

Malfunction of the joints.
Malfunction and/or destruction of joints.

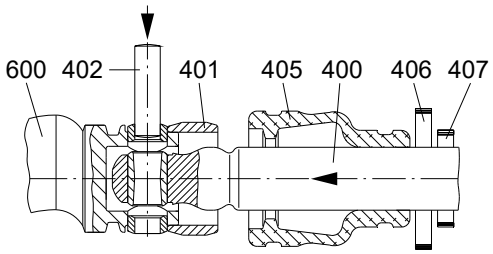
- ➢ Replace the coupling rod pins (402) and guide bushings (403) jointly.

9.2.3.4 Coupling rod (400) – reassembly

- Slide the universal joint sleeve (405) and holding bands (406, 407) onto coupling rod (400).
- Fit the diameter and width of the holding band of the universal joint sleeve.
- Fill the joint head with SEEPEX joint grease.

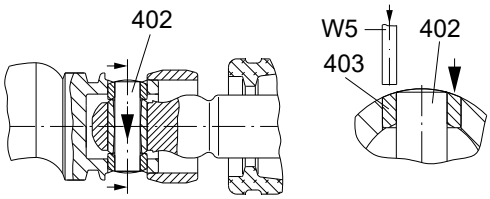
Rotor (600)

- Insert coupling rod pins (402).
- Slide on retaining sleeve (401).
- Connect the rotor/coupling rod.



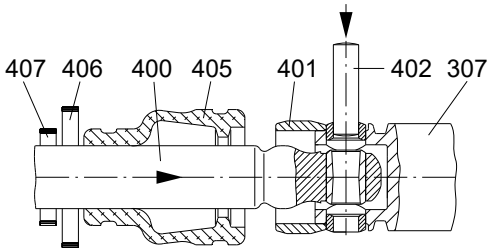
Tool (W5/drift)

- Slide in the coupling rod pins (402).
- Knock the guide bushings (403) in.



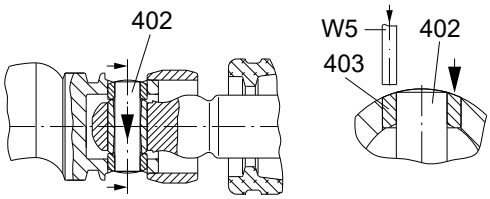
Plug-in shaft (307)

- Insert coupling rod pins (402).
- Slide on retaining sleeve (401).
- Connect the plug-in shaft/coupling rod.



Tool (W5/drift)

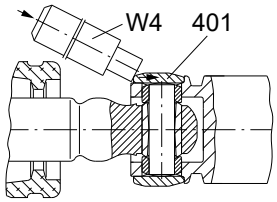
- Slide in the coupling rod pins (402).
- Knock the guide bushings (403) in.



9.2.3.5 Retaining sleeve (401) - reassembly

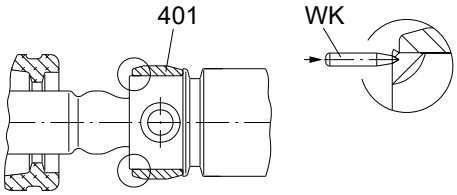
Tool (W4/assembly mandrel)

- Knock back retaining sleeve (401).
  - Use tool (W4).



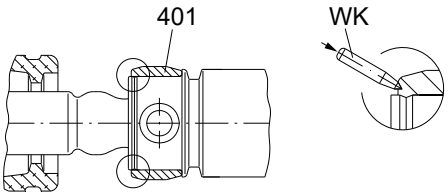
Rotor (600) unhardened material

- Secure retaining sleeve (401) in a displaced manner (2x180°).
  - Use suitable tool (WK).



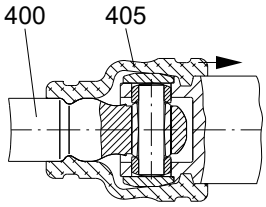
Rotor (600) hardened material

- Secure retaining sleeve (401) in a displaced manner (2x180°).
  - Use suitable tool (WK).

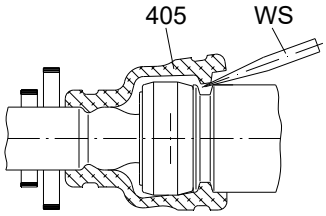


9.2.3.6 Universal joint sleeve (405) - reassembly

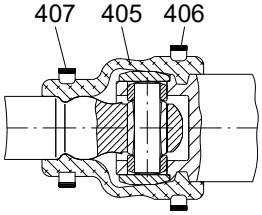
- Moisten the surface of the coupling rod (400)/ inner surface of the universal joint sleeve (405) with joint grease (maintenance, chapter 7.0).
- Slide on the universal joint sleeve (405).



- Vent the interior of the joint.
  - Use suitable tool (WS).



- Assemble holding band.
  - Holding band assembly (chapter 9._).



9.3 Holding band - assembly

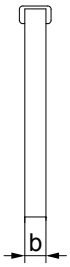
9.3.1 Prepare the holding band

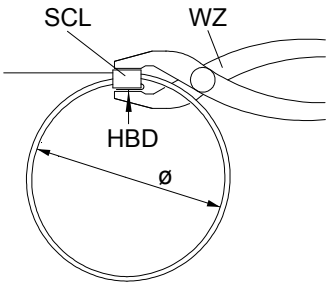
➢ Only use prefabricated double-band holding bands.

9.3.2 Check the holding band

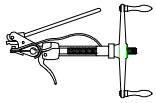
- Bent-over holding band (HBD) is in contact with holding band loop (SCL) to avoid damaging universal joint sleeve.

➢ Press on holding band (HBD) using tool (WZ) if necessary.





9.3.3 Assemble the holding band



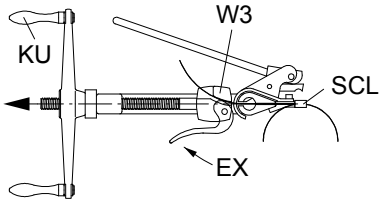
➢ Use tool (W3/mounting tool)

➢ Feed holding band into tool (W3).

➢ Hold ends of holding band with the eccentric lever (EX).

➢ Turn the crank (KU) until the holding band is strained and lies against the holding band loop (SCL).

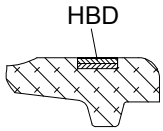
➢ Carefully pull the holing band together until it is in contact with the circular groove of universal joint sleeve.



9.3.4 Correct tension of the holding band (HBD)

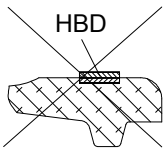
Correct

The holding band (HBD) has drawn in the out shape of the universal joint sleeve and is firmly seated.



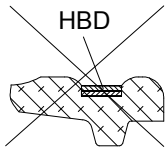
Incorrect

The holding band (HBD) is too loose, can slip off.



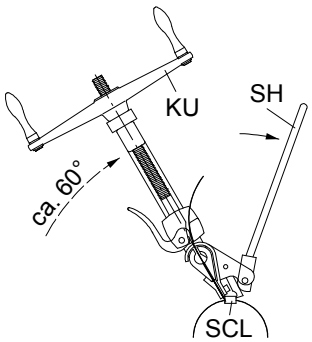
Incorrect

The holding band (HBD) is too tight, universal joint sleeve will be damaged/sheared off.



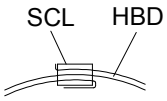
9.3.5 Cant up the holding band

- Swivel mounting tool (W3) approx. 60° upwards.
- Loosen crank (KU) by a half turn.
- Swivel cutting lever (SH) forward until the pressure piece is lying behind the holding band loop (SCL).



9.3.6 Shear the holding band (material: 1.4301; 1.4571)

- Hit the cutting lever (SH) with the inside of your hand.
  - Cant up and shear the end of the holding band behind the loop (SCL).
  - Carefully straighten up the holding band if it rises up on the sheared side.



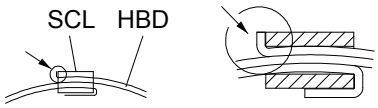
NOTICE

Universal joint sleeve damage.
Pin joint grease can emerge.

- Avoid hammering or knocking.

9.3.7 Check the holding band after assembly

- The holding band must lie in the groove of the universal joint sleeve.
- Replace the holding band if the holding band slips back through the loop.



9.4 Single acting mechanical seal

9.4.1 Safety

WARNING

Shaft seal is leaky.
Leakage may escape into the atmosphere.

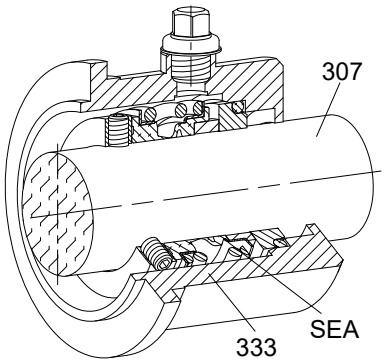
- ➢ Take safety measures to protect persons and the environment.
- ➢ Wear suitable protective clothing.
- ➢ Dispose of leakage appropriately.
- ➢ Note applicable regulations when handling hazardous substances.

9.4.2 Operating conditions and material combination

- Adjust to the relevant application
  - – Refer to technical data (chapter 3).

9.4.3 Design

- Single acting mechanical seal



9.4.4 Commissioning

NOTICE

Dry running of the mechanical seal.
Damage to property may result.

- ➢ The mechanical seal must be laid in liquid medium before being commissioned.

Circulation, flushing and/or flushing pipe

- Additional flushing or circulation pipes are not required where shaft sealing lies in medium.
- Flushing pipes may be possible under special circumstances and after speaking to SEEPEX.

NOTICE

Shaft seal is not leakage free.
Damage to property through leakage.

- ➢ Components which come into contact with leakage must be corrosion-resistant or otherwise suitably protected.

Adjust shaft seal

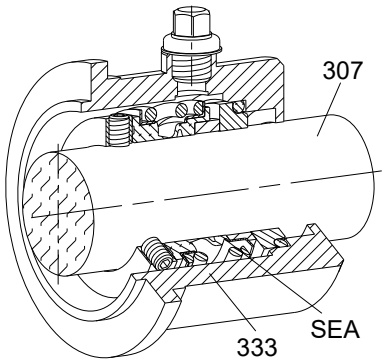
- ➢ It is absolutely vital to adjust at the application site in a manner appropriate for the operating conditions.
- ➢ Refer to the sectional drawing of the shaft seal for setting measurements.
- ➢ Set the setting measurements of the shaft seal to the plug-in shaft (307).

9.4.5 Monitoring during operation

NOTICE

Shaft wear.
Damage to property may result.

- Conduct a daily visual inspection.
- Install a new shaft seal (SEA).
- Possibly replace the plug-in shaft (307).

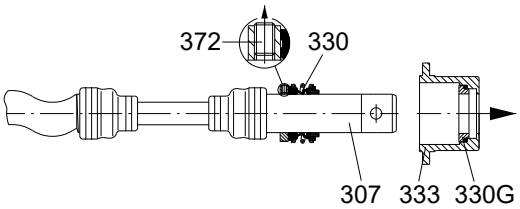


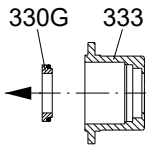
9.4.6 Dismantling of the mechanical seal

Refer to data sheet (chapter 3.1) and sectional drawing of the shaft seal (chapter 9._) for design.

With axial locking device

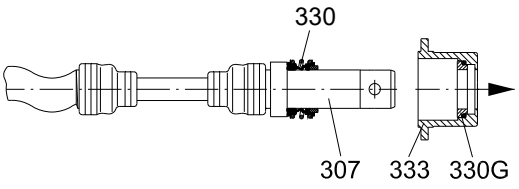
- Clean plug-in shaft (307), remove edges/ burrs.
- Moisten plug-in shaft (307) with lubricant (thinned liquid soap).
- Pull mechanical seal casing (333) from the plug-in shaft (307).
- Loosen the axial locking device of the mechanical seal (330/372); pull mechanical seal (330) from the plug-in shaft (307).
- Push counter ring of the mechanical seal (330G) with seal out of the mechanical seal casing (333).

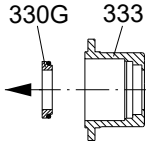




Without axial locking device

- Clean plug-in shaft (307), remove edges/ burrs.
- Moisten plug-in shaft (307) with lubricant (thinned liquid soap).
- Pull mechanical seal casing (333) from the plug-in shaft (307).
- Pull the mechanical seal (330) from the plug-in shaft (307).
- Push counter ring of the mechanical seal (330G) with seal out of the mechanical seal casing (333).





9.4.7 Reassembly of mechanical seal

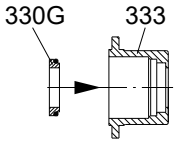
Shaft sealings are high-quality precision parts.

Their installation is therefore to be undertaken with care.

Careful handling and the utmost of cleanliness are prerequisites.

➢ Assembly aids such as oil/grease are not permitted.

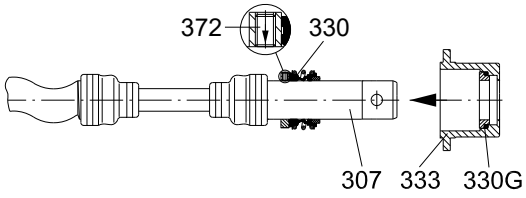
With axial locking device



➢ Clean the mechanical seal casing (333).

➢ Moisten the seal with lubricant (thinned liquid soap).

➢ Attach the counter ring and seal using even pressure into the mechanical seal casing (333).



➢ Clean the plug-in shaft (307), remove edges/burrs.

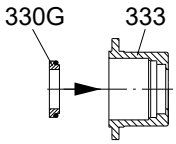
➢ Adjust the set collar (372) in accordance with sectional drawing of shaft seal (chapter 9._).

➢ Stick the set screw in and determine.
  – Use "medium-strength" adhesive.

➢ Moisten plug-in shaft (307) and elastomer parts of the mechanical seal (330) with lubricant (thinned liquid soap).

➢ Slide mechanical seal (330) onto the plug-in shaft (307) until the installation edge has been reached.

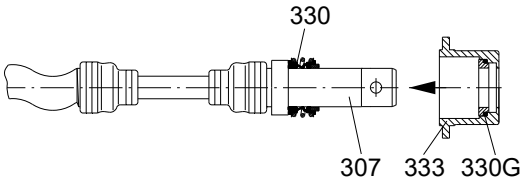
Without axial locking device



➢ Clean the mechanical seal casing (333).

➢ Moisten the seal with lubricant (thinned liquid soap).

➢ Attach the counter ring and seal using even pressure into the mechanical seal casing (333).



➢ Clean the plug-in shaft (307), remove edges/burrs.

➢ Adjust mechanical seal (330).
  – Note sectional drawing of shaft seal (chapter 9._).

➢ Moisten plug-in shaft (307) and elastomer parts of the mechanical seal (330) with lubricant (thinned liquid soap).

➢ Slide mechanical seal (330) onto the plug-in shaft (307) until the installation edge has been reached.

12.1 Additional components

12.2 Technical information

12.3 Manufacturer's documents shaft seal

1. General

	NOTICE
Dry-running of the pump/temperature increase in the stator Damage to property and malfunction can be caused. ➢ Adhere to max. permissible operating temperature. ➢ Install dry-running protection device (TSE).	

Functional principle:

- continuous monitoring of the temperature in the stator (temperature sensor)
- Shut off the pump when reaching the set category temperature.

Operating mode:

- existing temperature at the stator is compared to the category temperature in the TSE control device.
- Two relays switch within the TSE control device when reaching the shut-off value.
- The drive motor is shut off through potential-free alternating contacts.
- An alert is triggered.
- A required acknowledgement of the alert prevents an automatic reactivation of the pump.

2. Technical Data

2.1 Temperature sensor

- The temperature is measured at the stator through an NTC resistor with a protective sleeve.

Permissible temperature range: 0-150°C

Standard resistor: 10 kOhm at 25°C

Temp °C	0	10	20	25	30	40	50	60
Resistor Ohm	32,650	19,900	12,490	10,000	8,057	5,327	3,603	2,488

Temp °C	70	80	90	100	110	120	130	140
Resistor Ohm	1.752	1.255	915	678	510	389	301	235

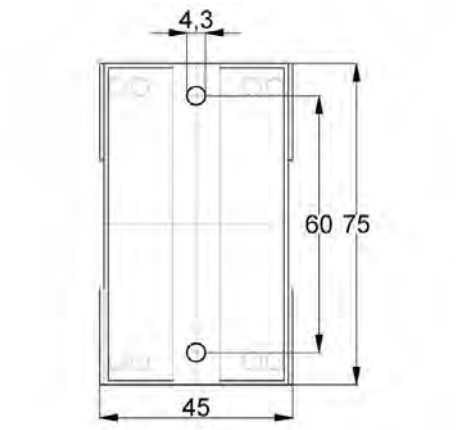
2.2 Technical data - TSE control device

- The TSE control device is suitable for cabinet installation or wall mounting.

Types:	SGRTSE 230V ACB
	SGRTSE 115V ACB
	SGRTSE 24V ACB
	SGRTSE 24V DCB
Temperature range:	0-150°C
Input:	NTC temperature sensor 10 kOhm (at 25°C) with sensor breakage guard at -25°C
Relay output:	2 potential-free changeover contacts (K1, K2), switching capacity 500 VA at 110-230 V resistive load
Available operating voltage:	24V, 115V, 230V AC; 24V DC
Power drain:	max. 4 VA
Sensor circuit:	Open-circuit voltage max. 2.5 VDC Short-circuit current max. 0.5 mA DC
Display at the device:	Malfunction/dry-running Shut-off temperature
Operation at the device:	Setup shut-off temperature Reset alert
Housing material:	ABS
Fastening:	Installation on standard bar 35 mm in accordance with standard or screw connection in accordance with standard.
Protection:	Casing IP 40; terminals IP 20
Ambient temp.:	0-50!
Dimensions:	45x75x110 mm (WxHxD)
EMV (2004/108/EG):	CE conform in accordance with standard

2.3 Dimensions and wall mounting

- Installation depth = 110 mm



3. Electrical connection

3.1 Installation instructions

Check line voltage

➢ Check line voltage/nominal voltage against information on type plate before connection and commissioning.
  – Permissible mains voltage variations of the nominal equipment voltage +/-10%

➢ Electrical connections are in accordance with the connection map, the provisions of the local utility or the relevant VDE regulations.

Mains power failure

➢ Initiate appropriate measures to prevent the failures.
  – Filter failures through external mains filter.
  – Equip device internally with mains filter.
  – Install sensor leads shielded.
  – Ground shield on one side.

3.2 Connection diagram TSE control device

- Terminal assignment

1 + 3	Operating voltage
11 + 13	Operating hour counter potential-free contact
12 + 13	external potential-free contact
14 +15	Temperature sensor
5, 6, 7	Relay output K1
8, 9, 10	Relay output K2

- The TSE control device can be released after dry-running by a button (closer) at terminals 12+13.

➢ Install button (closer).

3.3 Relay function

Actual temperature > shut-off temperature	**(Malfunction/dry-running)**
Contact 6-5 and 9-8	closed
Contact 6-7 and 9-10	open

- Relays K1 and K2 are in parallel and they work together.
  - K1: Switch-off condition integrated in motor contactor control.
  - K2: optional connection to the fault sensor or process computer (reserve).

4. Measures before commissioning

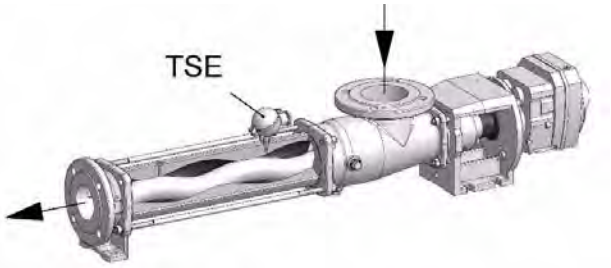
4.1 Check position of temperature control point at pump

➢ At the factory, the temperature sensor is always installed at the liquid inlet side.

➢ Check the specified installation position of the temperature control point when changing the direction of rotation and exchanging the stator.

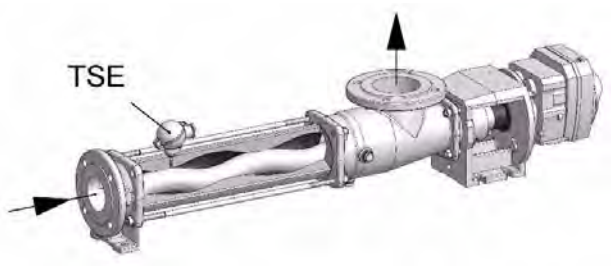
4.1.1 Pump with "anti-clockwise rotation" - standard design

➢ Check suction casing side fitting position.



4.1.2 Pump with "clockwise rotation" - special design.

➢ Pressure branch side fitting position.



4.1.3 Performance check

➢ Execute performance check before first commissioning.
➢ Switch on control voltage at terminals 1+3.
  – Digital display at TSE control device is illuminated.

➢ Keep "stator temp" button depressed and read temperature value.

• The function exists if the display is in accordance with the existing temperature.
➢ Observe deviations in case of functional failures.
  – Find malfunctions, causes and remedies (→ see chapter 8) in the operating and assembly instructions.

5. Commissioning and control

5.1 Set the switch-off temperature

➢ Set the switch-off temperature at the TSE control device as low as possible.
  – Shorter shut-off times after the dry-running occurs.
  – optimum stator protection

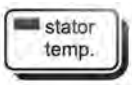
5.1.1 Coarse setting of the shut-off temperature

• When delivered, the shut-off temperature is factory-set to 50°C.
• Maintain factory settings during commissioning or, in case of higher medium temperatures, set a value of 20-30°C above the temperature of the pumped medium.

➢ After the coarse setting, commission the pump for a max time of 60 min.
  – Subsequently, perform the fine adjustment of the shut-off temperature (→ chapter 5.1.2).

5.1.2 Fine adjustment of the shut-off temperature

➢ Start pump until the operating temperature in the stator is stabilized (approx. 30-60 min.).



- This will be shown on the display of the TSE control device when the pump is running and by pressing the button "stator temp.".

➢ Set the final shut-off temperature (→ chapter 5.1.3).
  – The shut-off temperature is 10°C higher than the operating temperature displayed.
  – Adhere to chapter 5.1.3.
  – Consider maximum medium temperature that can occur during operation.

➢ Check information in the data sheet for a medium temperature > 40°C.

➢ Rotor/stator - consider sizing.

➢ A consultation with the manufacturer is required if the temperature information in the data sheet and the actual value do not conform.

5.1.3 Adjust shut-off temperature at the control unit.

➢ Switch control voltage on.
  – After a self-test at the control unit, the currently set shut-off temperature will be shown on the display.

➢ Press briefly
  – Setup mode is displayed.
  – The display shows alternating "SET" and the shut-off temperature set last.

➢ Increase shut-off value.
  – The value changes initially by +1° each.
  – After approx. 3 sec. in +10° steps.

➢ Decrease shut-off value.
  – The value changes initially by -1° each.
  – After approx. 3 sec. in -10° steps.

➢ Press briefly
  – Operating mode is displayed.
  – Adjusted shut-off temperature was transmitted to the permanent memory and will be shown on the display.

- In setup mode, the device changes - without saving possibly changed settings - after 10 sec. into the operating mode.

5.2 Switch display from °C to °F

➢ Press button 10 seconds until the display changes.

- The selected temperature unit will be displayed next to the °C or °F symbol.

5.3 Release control unit after the dry-running

- The installed relays switch-off and remain locked in this position if the set temperature at the TSE control unit is exceeded.
  - Red LED appears (alert).

➢ Acknowledge alert/release relay in accordance with the following options:

➢ actuate "reset" button at the TSE control unit for at least 1 sec.
➢ Shut-off operating voltage at the TSE control unit (terminals 1-3).
➢ Actuate external contact ("reset" button, closed for at least 1 sec.).

5.4 Call operating hour counter

- The TSE control unit includes an operating hour counter. This value can be called on the service level. The transition to the service level is only possible after a code number has been entered.

➢ Press approx. 5 sec until the "Cod" is displayed.
  – The display shows alternating "Cod" and 100.

➢ Press button sequence.
➢ Enter code "33".

➢ Press briefly
  – Code will be acknowledged.
  – Transfer to the service level.

Display alternating: "¯Hi¯" and #value# • No function

➢ Press briefly
  – Transfer to next parameter/display value.

Display alternating: "bh.Hi" and #value# • Operating hour counter (displayed value x 10,000)

➢ Press briefly
  – Transfer to next parameter/display value.

Display alternating: "bh.Lo" and #value# • Operating hour counter (displayed value x 1)

➢ Return to the operating mode.

6. Stator change

6.1 General

➢ List the material of the installed TSE sensor sleeve when ordering a replacement stator.
➢ Do not readjust the sensor sleeve installed at the factory.

6.2 Dismantling/reassembly connection head and temperature sensor

- Adherence to associated drawing required.

6.2.1 Dismantling

- Do not reuse sensor sleeve after dismantling.

- Open cover of connection head.
- Remove connection wires at the temperature sensor.
- After loosening the screw at the side, pull off connection head from the threaded sleeve.
- Rotate threaded sleeve out of the stator.
- Remove clamp screw, rubber ring and temperature sensor from sensor sleeve.

6.2.2 Reassembly

- Do not readjust the sensor sleeve installed at the factory.
- Install threaded sleeve in the stator.
- Install sensor sleeve.
- Open cover of connection head.
- Install connection wires at the temperature sensor.
- Remove protective tube (transport guard of sensor sleeve).
- Slide thermistor sensor with clamp screw and rubber ring up to the base of the sensor sleeve and fixate.
- Screw threaded sleeve with two O-rings into threaded hole at the stator.
- When installing the connection head, route connection cable at the thermistor sensor from below through the hole in the terminal board.
- After fixating the connection head on the threaded sleeve, fasten connection cable at existing terminals and close connection head.

7. Functional failure

Causes for alerts and shut-offs of the pump without dry-running:

- Å Sensor or wire break
- Å Short-circuit sensor/wire
- Å Overshooting or undershooting of the measuring range (-25...150ÁC)

We recommend the following approach for checking the TSE control device and the sensor circuit incl. temperature sensor.

7.1 Performance check sensor circuit

- ➢ Remove the temperature sensor supply line at the TSE control device terminals 14+15.
- ➢ Connect resistor measuring unit (multimeter/ohmmeter).
- ➢ Determine electrical resistance with using the table (→ chapter 2.1) and compare with the temperature at the pump.
- ➢ Proceed as follows in case of resistor value deviations >10% from the target value:
- ➢ disconnect connecting wire to the control unit at the connection head of the pump
- ➢ Repeat measurement at the connection head of the TSE.
  - ï A defect at the temperature sensor exists in case of identical deviations.
- ➢ Exchange the temperature sensor.
  - ï Observe chapters 6.2 - 6.3.

Å In case of correct values, a defect of the connection cable or the connection terminals exists.

7.2 Performance check TSE control device

Å A defect at the TSE control device is probable if the sensor circuit is functioning properly.

- ➢ To check, disconnect terminal 14+15 of the sensor supply line.
- ➢ Connect commercially available carbon film or metal film resistor in accordance with the following array:

Resistor Ohm	10,000	5,600	2,200	1,000	560	220
Switch temp. ÁC	25	39	63	87	107	143

- ➢ Switch on control voltage at terminals 1+3.
  - ï Digital display at TSE control device is illuminated.

- ➢ Keep "stator temp" button depressed and read temperature value.
  - ï Read value must be in accordance with the switching temperature allocated to the resistor used.
- ➢ Return TSE control unit for repair in case of display deviations of more than 5-10ÁC or in case of no display.

Warranty Card

Complete and return to validate warranty

Please complete this card and return it to seepex Inc. By using this card, the valid warranty period will commence at the pump “start-up” date. If this card is not completed the warranty coverage period will commence on the date the pump is shipped from the seepex factory. This card must be completed and mailed no later than one year from the date of shipment.

TERMS & CONDITIONS OF SALE AND/OR REPAIR 01.16

The following terms and conditions shall apply to an order for all or any part of the articles covered by the accompanying offer unless a specific exception in included therein. Acceptance of any order by SEEPEX Inc. is expressly made conditional upon Buyer's acceptance of SEEPEX Inc. Terms and Conditions of Sale and/or Repair. All prior or future terms, conditions or negotiations (whether written or oral) by Buyer will therefore be considered void and inapplicable, unless otherwise agreed in writing. SEEPEX Inc. reserves the right, in its sole discretion, to refuse any order, unconditionally, for any reason, including but not limited to: expiration of the validity of the offer, errors in the offer, unacceptable payment risks, conflicts with contractual commitments made to other potential customers and the chance that a customer may try to enforce an implied warranty or merchantability of the products offered.

1. PRICES

1.1.
Any prices quoted shall only be valid for orders placed within 30 days from the date of issue of the offer. Prices are Ex-Works SEEPEX Inc. plant (Enon, Ohio USA) in U.S. dollars, unless otherwise agreed. SEEPEX Inc. reserves the right to correct typographical or clerical errors.

2. TERMS

2.1.
All orders are subject to approval by the SEEPEX Inc. Credit Department. Unless otherwise agreed, if payment for the invoice due is not made in full within thirty (30) days after shipment, late fees of eighteen percent (18%) per year (equivalent to a nominal monthly interest rate of 1.5%) will be applied on the unpaid balance until paid in full. The terms and conditions herein set forth are based upon tariffs, taxes, foreign exchange rates, delivery, and other conditions in effect on the date of the customer's order. In the event that such tariffs, taxes, foreign exchange rates, delivery, and/or other conditions should change prior to delivery of the goods, SEEPEX Inc. reserves the right to charge such increased duties, taxes, or charges to the customer.

2.2.
Unless the order includes the appropriate exemption certificates and/or licenses, duties and taxes levied by Federal, State, or other governments are required to be charged automatically at the rate imposed at time of importation/shipment. Any change in law, regulations, or Government practice which causes a variation of any kind in the applicable charges from the amounts stated in the offer shall result in an equivalent change in the price quoted.

2.3.
Until payment is made in full, SEEPEX Inc. shall retain the right, without notice, to repossess and/or retain the items, and/or dispose of them, for its benefit and hold the customer responsible for any loss. Customer agrees to enter into any agreements, contracts, or notices required confirming such rights.

3. SECURITY

3.1.
In order to secure any obligations due to SEEPEX Inc. from the customer the customer grants to SEEPEX Inc. a security interest in:
a) The merchandise covered by the customer's order (s), and
b) All property and funds of the customer now or hereafter in SEEPEX Inc.'s possession, and in all additions and proceeds of such merchandise and/or property. The customer hereby authorizes SEEPEX Inc. to sign alone any financing statement or statements and to do all and any other things which may be necessary to perfect such security interest.

4. CANCELLATION

4.1.
After acceptance, orders may be canceled only with the express approval of SEEPEX Inc. In the event of an approved cancellation, the customer shall remain responsible for payment for all work performed and/or material expenses incurred by SEEPEX Inc. as of the time of cancellation. SEEPEX Inc. reserves the right to cancel the order if SEEPEX Inc. determines, in its sole discretion, that the customer's financial condition renders the customer unable or unlikely to pay for the order as agreed.

5. RETURN

5.1.
No credit will be allowed for returns unless SEEPEX Inc. has authorized such returns in writing in advance. A copy of this authorization must be returned with the item as the packing slip. All returns are subject to restocking charges and to the SEEPEX Inc. Return Goods Authorization (RGA) Policy, which is available on www.seepex.com, and is incorporated herein by reference. SEEPEX Inc. will only issue credits for items that can be resold. Items that are special for a specific customer, including but not limited to: special hoppers, baseplates, electrical panels, gear reducers and electric motors are specifically excluded from consideration for credit. Any items not received in good condition or items that cannot be put back into stock will not be accepted. Any elastomer material with over three (3) years of fabrication will not be accepted for return and/or credit. Customers must pay for all freight associated with any return, including parts or equipment that may be considered to be covered by the limited warranty protection clause below. Oustanding RGA's that have declined repair will be scrapped automatically after ninety (90) days if no other written instructions are provided.

6. SHIPMENT

6.1.
a) Handling Charge: Customer shall be responsible for making all arrangements for shipment of the order with a suitable carrier. In the event that customer requests that SEEPEX Inc. make arrangements for shipment, then customer agrees to pay to SEEPEX Inc., in addition to the applicable shipping charges, a handling charge in the amount of 10% of the shipping charges with a minimum $5.00 to a maximum charge of $150.00, with special services requiring additional charges.
b) New Articles: Where shipping instructions dictate no specific routing, SEEPEX Inc. will utilize its best judgement in determining routing but shall not be liable for any charges once the goods have reached their agreed upon point of delivery. If changes are made at customer's request in a) the agreed upon point of delivery, or b) in the routing selected by SEEPEX Inc. and if such changes involve additional costs to be incurred, such costs shall be borne exclusively by the customer, unless otherwise agreed in writing.
c) Repair Work: All items for which the customer requests repair or other services by SEEPEX Inc. shall be delivered to and picked up from the SEEPEX Inc. plant (Enon, Ohio USA) unless otherwise agreed in writing. All costs of delivery shall be paid by the customer unless otherwise agreed to in writing prior to shipment.
d) All Orders: On collect freight shipments, cartage charges from plant to carrier are the responsibility of the customer. Title to articles passes to customer upon delivery to carrier acting as customer's agent subject to any right of retention by SEEPEX Inc. All claims for shortage in, and damages in, shipment or otherwise must be reported to carrier immediately upon receipt with copy or report to ourselves within five (5) business days.

7. WARRANTIES & LIABILITY LIMITATIONS

7.1.
a) New Articles: SEEPEX Inc. warrants articles of our manufacture against defects in material and/or workmanship for a period of three (3) years from date of delivery, provided that the articles have been installed, maintained, and operated in strict accordance with SEEPEX Inc. recommendations and instructions.
b) Repair Work: Defined herein as work and services performed by SEEPEX Inc. SEEPEX Inc. warrants all repair work and services that it performs against defects in workmanship and/or materials for a period of three (3) years from the date of delivery of the repaired articles.
c) All Orders: All warranty claims shall be submitted promptly in writing to SEEPEX Inc. Any warranty replacement and/or repair shall be made Ex-Works SEEPEX Inc. plant (Enon, Ohio USA). SEEPEX Inc.'s warranty obligation shall be limited to the replacement and/or repair only of defective material and/or workmanship.

7.2.
In no event shall SEEPEX Inc. be liable for any incidental or consequential loss or damage of whatever kind of nature including but not limited to loss of business income or profits, or damage resulting from delay in manufacture or delivery, loss of use or damage to any installation into which the article may be installed, whether arising out of contract or tort.

SEEPEX Inc.
511 Speedway Drive
Enon, Ohio 45323

sales.us@seepex.com
www.seepex.com

7.3.
SEEPEX Inc. shall not be liable for any loss or damage resulting from delay and/or late delivery due to causes beyond our reasonable control. Notwithstanding anything herein to the contrary, SEEPEX Inc.'s liability to customer on any cause of action shall be limited to the amount paid by the customer on the subject order. SEEPEX Inc. makes no warranties, express or implied, with respect to articles or products manufactured or provided by any party other than SEEPEX Inc., except to transfer to the customer, where permissible, any warranty provided to SEEPEX Inc. by the original manufacturer. On any claims for repairs and/or replacement under such warranty, all costs incurred by SEEPEX Inc. which are not underwritten by the original manufacturers shall be borne by the customer. Except as provided herein, SEEPEX Inc. expressly disclaims all representations, promises, or warranties, express or implied with respect to any products, articles, work, or services, including any warranties of merchantability and of fitness for a particular purpose. All warranties made by SEEPEX Inc. shall be void where the goods have been subject to misuse, neglect, damage or alteration. SEEPEX Inc. shall be held free and harmless from any dispute or claim anywhere arising from and relating to infringement of patent, design, trademark, or copyright of items, sold or repaired under this contract.

8. PROPERTY RIGHTS AND RISKS

8.1.
SEEPEX Inc. disclaims any liability or responsibility whatsoever with regard to loss or damages to the customer's property while in the possession, custody or control of SEEPEX Inc. for requested repairs or other services, and the customer expressly agrees to indemnify and hold SEEPEX Inc. harmless against any and all claims for such loss or damage.

9. HAZARDOUS MATERIALS

9.1.
Any hazardous materials or the existence of any hazards relative to the condition of any product tendered to SEEPEX Inc. for service or repair work must be disclosed by customer in writing in the RGA Request Form, whether or not required to be disclosed per federal law on the MSDS sheet. **Customer shall defend, indemnify and hold SEEPEX Inc. harmless from and against any and all claims of injury or damage, including attorney's fees, caused by any hazardous condition or material on or about products accepted for service/repair. This obligation includes but is not limited to claims of bodily injury or death suffered by SEEPEX Inc. employees, or by other parties.**

1. Importance of the operating instructions

These operating instructions are intended to provide general information and safety guidelines. It is the responsibility of the buyer, machine builder, installer and user of the NORD product to make sure that all the proper safetynotes and operating instructions have been reviewed and understood. If the contents of this instruction or any applicable operating instructions are not understood, please consult NORD.

⚠ *WARNING* ⚠

Electric motors, gearmotors, electrical brakes, variable frequency drives, and gear reducers contain potentially dangerous high-voltage, rotating-components and surfaces that may become hot during operation. All work involved in the transport, connection, commissioning and maintenance of any NORD product must be carried out by qualified and responsible technicians.

2. Inspect incoming freight

Before accepting shipment from the freight company, thoroughly inspect the NORD equipment for any shipping and handling damage. If any goods called for in the bill of lading or express receipt are damaged, or if the quantity is short, do not accept until the freight express agent makes an appropriate notation on your freight bill or express receipt. If any concealed loss or damage is discovered later, notify your freight carrier or express agent at once, and request a formal review of your claim.

Claims for loss or damage in shipment must not be deducted from the NORD invoice, nor should payment of the NORD invoice be withheld awaiting adjustment of such claims, as the carrier guarantees safe delivery. NORD will try to assist in collecting claims for loss or damage during shipment; however, this willingness on our part does not remove the transportation company's responsibility in reimbursing you for collection of claims or replacement of material.

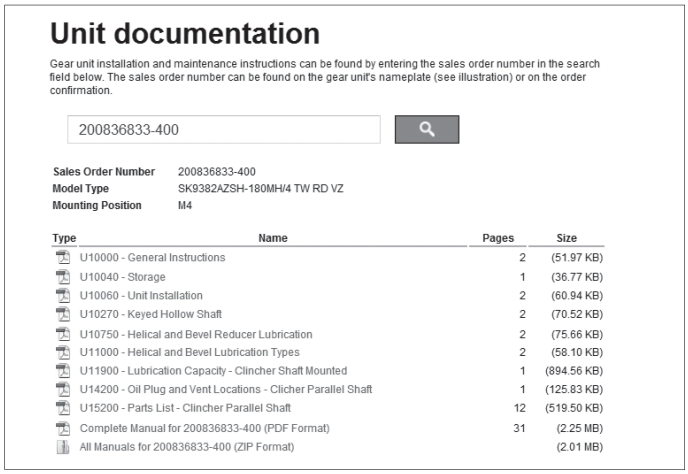
3. Obtaining detailed operating instructions

One can receive the detailed installation and maintenance instructions by entering a serial number (or NORD order number) at the appropriate location on the NORD web site.

i. Record the serial number from your gearmotor, gear reducer, or motor nameplate, or record the serial number found on your order confirmation.

ii. Go to **www.nord.com/docs** to download the appropriate operating instructions.

EXAMPLE: www.nord.com/docs



Unit documentation

Gear unit installation and maintenance instructions can be found by entering the sales order number in the search field below. The sales order number can be found on the gear unit's nameplate (see illustration) or on the order confirmation.

4. Intended use

NORD is a supplier of electric motors, gearmotors, reducers, electromechanical brakes, mechanical variators, and electrical variable frequency drives that are intended for commercial installations on larger systems and machines.

⚠ *WARNING* ⚠

NORD does not accept any liability for damage or injury caused by:

- Inappropriate use, operation or adaptation of the drive system.
- Unauthorized removal of housing covers, safety and inspection covers, guarding, etc.
- Unauthorized modifications to the drive system.
- Improper servicing or repair work on the drive system.
- Damage caused during shipment or transportation.
- Disregard of the important Safety Notes or Operating Instructions.

5. Notes concerning warranty and liability

All units are supplied according to the terms described in our standard "Conditions of Sale." The unit limited warranty is also defined in our "Conditions of Sale" and is located in the back of our product catalogs as well as the back of your order invoice.

All NORD Safety Notes and all related NORD Operating instructions shall be considered up-to-date at the time in which they were compiled by the buyer, machine builder, installer or user. NORD reserves the right to incorporate technical modifications and information updates to any safety/operating instructions that are within the scope of providing additional knowledge or clarification, communicating design changes, or product enhancements. Information updates may include any NORD product, or subsequent products purchased and supplied by NORD; No specific claims can be derived from the information or illustrations and descriptions contained in the safety notes or related operating instructions.

⚠ *WARNING* ⚠

NORD assumes no liability for personal injury, equipment damage or malfunctions resulting from failure to comply with any installation safety notes. The applicable national, regional, and local work regulations and safety requirements must also be complied with. Failure to comply with any safety notes or regulations may result in serious injury, damage to property, or even death.

6. Checklist for installation and operation

☑ Verify that the purchased NORD product has been supplied with the expected accessories & options. Check the received goods and packing slip to make sure items are properly received.

☑ Make sure that you have all of the required Operating Instructions for your NORD electric motor, gearmotor, reducer, electromechanical brake, mechanical variable speed drives, or electrical variable frequency drives.

☑ Consult NORD if you feel you are missing any documentation or if you have questions.

1. Safety & information symbols

All work including transportation, storage, installation, electrical connection, commissioning, servicing, maintenance and repair must be performed **only by qualified specialists or personnel**. It is recommended that repairs to NORD Products are carried out by the NORD Service Department. Instructions related to operational safety will be emphasized as shown.

Symbol	Meaning
⚠	**General Warning or Hazard -** Severe risk or danger of personal injury or death by working around dangerously high electrical voltage or moving machinery. Proper safety precautions must be taken.
STOP	**Possible Harmful Situation -** Care must be taken to avoid the possibility of damaging the drive unit, driven machine, or the environment.
i	**Important Note -** Useful note or tip to help assure trouble-free operation.
♻	**Material Disposal Note -** Important note concerning suggested material disposal.

2. Safety warnings

⚠ GENERAL WARNINGS ⚠

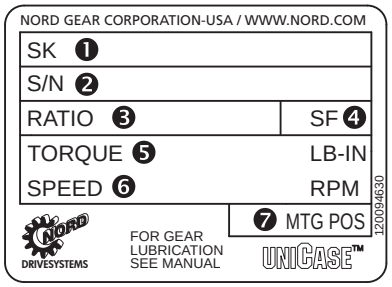
- All work involved in the transport, connection, commissioning and maintenance of any NORD product must be carried out by qualified and responsible technicians. All applicable national, regional, and local work regulations and safety requirements must also be complied with. **NORD assumes no liability for personal injury, accidental death, or equipment damage and malfunctions resulting from failure to comply with installation or operating instructions, safety notes, or any work regulations and laws!**
- Gear unit installation and maintenance work may only be performed when no power is available to the prime mover or motor. Electric motors, electrical brakes, and variable frequency drives, contain potentially dangerous high-voltage. Prior to installation or maintenance, shut down the power at the circuit breaker or power switch. **While working on the drive, make sure the power from the prime mover is isolated or secured on "lock-out" to prevent accidental start-up and to safeguard against injury!**
- Surfaces of motors and gear units may become hot during operation or shortly after start-up. In some instances additional protection against accidental contact may be necessary. **Use caution to avoid burns or serious injury!**

3. Observe published performance range & nameplate data

STOP HARMFUL SITUATION STOP

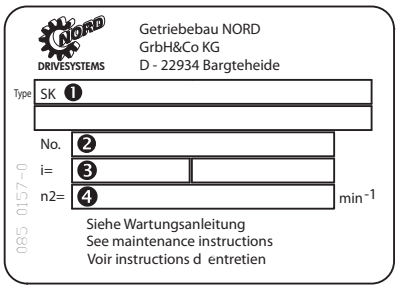
Observe the data on all reducer nameplates and verify published ratings for the NORD item/s in question. Do not operate any NORD equipment outside the published performance range. Failure to comply may result in damage to the drive unit, driven machine, or the environment.

U.S. Nameplate



❶ Model/Type
❷ Serial Number
❸ Gear Ratio
❹ Service Factor
❺ Torque Rating
❻ Output Speed RPM
❼ Mounting Position

European Nameplate



❶ Model/Type
❷ Serial Number
❸ Gear Ratio
❹ Speed

4. Transportation and handling

Make sure that all eyebolts and lifting lugs are tight and lift only at designed points. Protect the mounting surface from possible damage during transportation.

⚠ WARNING ⚠

Do not attach other machinery or loads to the NORD assembly, since the supplied lifting bolts are not designed for this purpose.

If the gearmotor or assembly is equipped with two suspension eye bolts, then both locations should be used for transportation and placement of the unit; in this case the tension force of the slings must not exceed a 45° angle.

In some instances it may be appropriate to use additional lifting straps or slings in order to assure safe transportation of the assembly. Always use sufficiently rated handling equipment and ensure that adequate safety measures are taken to protect personnel from injury during transportation. Once the NORD assembly is properly installed, remove the transportation fixtures.

7. DISPOSAL

MATERIAL DISPOSAL

Properly dispose of all used gear units and internal parts in accordance with all local regulations. In particular, all lubricants must be properly collected and disposed.

For confirmation of specific materials used in a specific reducer or gearmotor assembly, please consult NORD with the appropriate unit identification or serial number.

Components	Material
Gear wheels, shafts, rolling bearings, parallel keys, snap rings, spacers, shims, etc.	Steel
Gear housing and housing components	Cast iron or Aluminum (depending on type and size)
Worm gears	Bronze alloy
Radial seals, sealing caps, and rubber components	Elastomers with some steel
Coupling components	Plastic or Elastomer with Steel
Housing gaskets and flat oil seals	Asbestos-free sealing or gasket material (various types used)
Gear Oil	Mineral, SHC-Synthetic or PG-Synthetic (can vary)

1. Storage

IMPORTANT NOTE

For storage periods longer than 9 months, or for storage in less than desirable conditions, please consult NORD for recommendations.

Storage for up to 9 months is possible, so long as the following conditions are observed:

- Store the gear unit in its actual mounting position in accordance with the specified oil fill-level, in a clean and dry temperature controlled area. Avoid temperature fluctuations within the range of 0°C and 40°C (32°F to 104°F) and avoid relative humidity conditions in excess of 60%.
- Protect all exposed or unpainted shaft and flange surfaces with an anti-corrosion agent or grease.
- Store in a location free from shock and vibration, to avoid false brinelling of bearing elements and raceways.
- Whenever possible, rotate the shafts periodically, by hand if necessary, to help prevent brinelling (bearing damage) and to help keep the shaft seals pliable.
- Avoid direct exposure to the sun or UV light and aggressive or corrosive materials in the environment (ozone, gases, solvents, acids, caustic solutions, salts, radioactivity, etc.

2. Commissioning

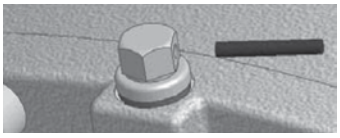
Prior to gear unit start-up, complete the following:

• Please check your gear unit for a vent and if applicable to your product, remove the sealing plug to activate.

WARNING

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start up.

Sealed vent



Activated vent

- Check the lubricant and be sure the gear unit is filled with the proper oil type, to the proper level, as determined by the mounting position.

IMPORTANT NOTE

Some smaller gear units are supplied as maintenance free/ lubricated for life gear units. Oil level may not be checked on some of these units.

- Check the condition of all shaft seals and all assembled flange gasket areas. If any change is detected in the shape, color, hardness or permeability, or if any leaks are detected, the corresponding shaft seals and/or gaskets must be replaced.
- Remove all anti-corrosive metal protectant from otherwise bare metal surfaces. Follow product manufacturers directions and warnings during surface protection removal.
- Check the resistance of all motor and brake windings to verify the integrity of the winding insulation and inspect all terminal box openings and wire connection areas to verify that all components are dry and free of corrosion.

3. Long-Term Storage

By taking special precautions, problems such as seal leakage and reducer failure due to the lack of lubrication, improper lubrication quantity, or contamination can be avoided. The following precautions will protect gear reducers during periods of extended storage:

- Store the gear unit in its actual mounting position in accordance with the specified oil fill-level, in a clean and dry temperature controlled area. Avoid temperature fluctuations within the range of 0°C and 40°C (32°F to 104°F) and avoid relative humidity conditions in excess of 60%.
- Fill the reducer full with oil that is compatible with the product normally used or recommended during service.
- Apply grease to all unpainted or unprotected shafts, bores, keyways, flange surfaces, tapped holes, and to the exterior of all oil seals.
- Store in a location free from shock and vibration, to avoid false brinelling of bearing elements and raceways.
- Once every few months rotate the input shaft approximately 10-20 revolutions to redistribute the weight of gears and shafts and to prevent brinnelling of the bearings and drying of the seal track.
- Avoid direct exposure to the sun or UV light and aggressive or corrosive materials in the environment (ozone, gases, solvents, acids, caustic solutions, salts, radioactivity, etc.)

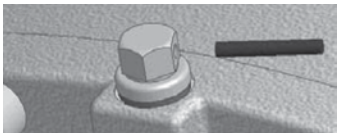
4. Commissioning After Long-Term Storage

• Please check your gear unit for a vent and if applicable to your product, remove the sealing plug to activate.

⚠ *WARNING* ⚠

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start up.

Sealed vent



Activated vent

- Remove all anti-corrosive metal protectant from otherwise bare metal surfaces. Follow product manufacturers directions and warnings during surface protection removal.
- Drain the reducer and refill it with the proper type and amount of lubricant.
- Observe start-up and initial operation to make sure there are no seal or gasket leaks, or unusual sounds, vibration or heat rise during operation.
- Check the resistance of all motor and brake windings to verify the integrity of the winding insulation and inspect all terminal box openings and wire connection areas to verify that all components are dry and free of corrosion.

1. Installation site

Drives must be properly installed if they are to produce the rated torque. Improper installation may lead to oil leaks, reduced life, or even catastrophic failure. NORD gear drives and motors are intended to be installed at a suitable mounting site under the following conditions:

- Unimpeded airflow to and around the units.
- Accessibility to oil drain, level and breather plugs.
- On brakemotors, allow adequate space for removing the fan guard and replacing and adjusting the brake.
- Mounting surfaces must be flat, torsionally rigid, and dampened against vibration.
- Unless special measures are taken, the immediate vicinity around the gear drive or motor should not be exposed to any aggressive or corrosive substances, contaminated air, ozone, gases, solvents, acids, alkalis, salts, radioactivity, etc.

2. Mounting position

Reducer mounting position charts illustrate the standard mounting positions for horizontal and vertical mounting. All gear units are assembled with the oil fill-level, oil-drain and vent plugs installed in their proper locations, **according to the customer-specified mounting position**. For mounting orientations other than shown consult NORD Gear.

STOP *HARMFUL SITUATION* STOP

The gear reducer may not receive proper lubrication if the unit is not mounted in the position for which it is designed. Observe the mounting position designated on the reducer nameplate, or specified in the order acknowledgement. Consult NORD prior to changing mounting position in the field. While it is often possible to simply relocate the oil fill-level and vent locations, and adjust the oil fill amount, in some cases, different mounting positions may lend themselves to different internal construction features.

3. Reducer mounting

- The support foundation must be straight, level and flat. Whether the gear unit is foot-mounted or flange-mounted, NORD recommends that the straightness and flatness of the customer-supplied support foundation follow **Table 1**.
- The gear unit must be properly aligned with the driven shaft of the machine in order to prevent additional stress or load forces from being imposed upon the gear unit.
- To facilitate oil drainage it may be desirable to elevate the gear box foundation above the surrounding support structure.
- All bolting surfaces must be clean and free from contamination and corrosion.

Table 1: Recommended Straightness and Flatness of Customer-Supplied Support Foundation

Above (in)	To & Including (in)	General Tolerance on Straigtness & Flatness ISO 2768-2, Tolerance Class K
0.00	0.39	+/- 0.002 in
0.39	1.18	+/- 0.004 in
1.18	3.9	+/- 0.008 in
3.9	11.8	+/- 0.016 in
11.8	39	+/- 0.024 in
39	118	+/- 0.031 in

Above (mm)	To & Including (mm)	General Tolerance on Straigtness & Flatness ISO 2768-2, Tolerance Class K
0	10	+/- 0.05 mm
10	30	+/- 0.1 mm
30	100	+/- 0.2 mm
100	300	+/- 0.4 mm
300	1000	+/- 0.6 mm
1000	3000	+/- 0.8 mm

Straightness: Based upon the length of the corresponding line.

Flatness: Based upon the longer lateral surface or the diameter of the circular surface.

STOP *HARMFUL SITUATION* STOP

The responsibility for the design and construction of the support foundation is with the user. The foundation must be adequate to withstand normal operating loads and possible overloads while maintaining alignment to attached system components under such loads. ***Motors and drive components mounted on prefabricated base plates can become misaligned during shipment. Always check alignment after installation.***

4. Steel foundation

An engineered structural steel foundation should be designed to provide adequate rigidity and prevent loads from distorting the housing or causing misalignment of internal gears and shafts. When foot-mounting the gear reducer, a base plate or sole plate with suitable thickness (generally equal or greater than the thickness of the drive feet) should be securely bolted to steel supports and extend under the entire gear drive assembly. When flange-mounting the gear unit, the bulk head plate must be engineered to minimize buckling distortions and support the cantilevered weight of the gear unit or gear motor.

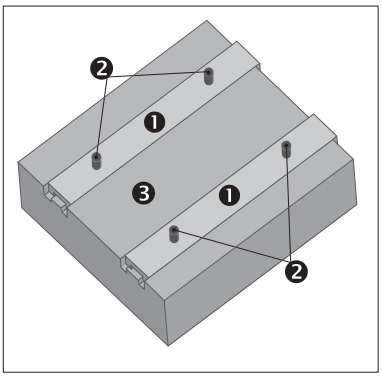
STOP *HARMFUL SITUATION* STOP

Do not weld on the gear unit or use the gear unit as an earth or ground connection for any welding procedure as this may cause permanent damage to the bearings and gears.

5. Concrete foundation

If a concrete foundation is used, allow the concrete to set firmly before bolting down the gear drive. Grout structural steel mounting pads and bolts of sufficient size into the concrete, to adequately distribute the load stress onto the concrete foundation.

Figure 1: Concrete Foundation



❶ Grouted Structural Steel Mounting Pads
❷ Mounting Bolts
❸ Concrete Foundation

6. Bolt connections for footed & flange mounted units

NORD footed reducers and flange-mount reducers (with B5 flange) have clearance designed into the mounting holes to allow for some minor adjustments in alignment. Bolt size, strength and quantity should be verified to insure proper torque reaction capacity whatever the mounting arrangement. Tightening torque for gear reducer mounting bolts, and recommended fastener grades, are provided in Table 2.

Table 2A: Tightening Torque for Inch Reducer Mounting Bolts

Thread Size	Grade SAE 5 / ASTM A449		Grade SAE 8	
(in)	(lb-ft)	(Nm)	(lb-ft)	(Nm)
1/4-20	7.1	9.6	10.0	13.6
5/16-18	16	21	22	30
3/8-16	28	37	39	53
1/2-13	69	93	98	132
5/8-11	138	188	195	264
3/4-10	247	334	348	472
7/8-9	396	537	558	757
1-8	592	802	833	1,130
1 1/8-7	-	-	1,233	1,672
1 1/4-7	-	-	1,717	2,327
1 3/8-6	-	-	2,267	3,073
1 1/2-6	-	-	2,983	4,045
1 3/4-5	-	-	4,458	6,045

- Calculated tightening torques are based a conventional 60°, clean and dry (un-lubricated) thread, with thread-friction and head-friction equal to 0.15.
- When using inch-fasteners, NORD recommends a minimum Grade SAE 5 (ASTM A-449) for sizes up to 1-8 UNC, and Grade SAE 8 for all larger sizes.

Table 2B: Tightening Torque for Metric Reducer Mounting Bolts

Above	ISO Grade 8.8		ISO Grade 10.9		ISO Grade 12.9

M30	1,180	1,600	1,660	2,250	1,950	2,650
M36	2,050	2,780	2,884	3,910	3,470	4,710
M42	3,297	4,470	4,639	6,290	5,560	7,540
M48	4,940	6,700	7,010	9,500	8,260	11,200

- Calculated tightening torques are based on a conventional 60°, clean and dry (un-lubricated) thread, with thread-friction and head-friction equal to 0.15.
- When using metric-fasteners, NORD recommends a minimum ISO Grade 8.8 bolt.

7. Mounting the prime mover

When the motor is not flange mounted or integrally mounted to the gearbox, it is important to properly secure and align the gear drive with respect to the driven machine before attempting to align the prime mover or motor.

A. After the main gear drive is properly aligned and bolted in place, align the prime mover with respect to the reducer input shaft.

B. Use shims under the feet of the prime mover as needed, and secure in place with the proper mounting bolts. Dowel pins may be field-installed to help prevent misalignment and ensure proper realignment if removed for service.

IMPORTANT NOTE

When using a high speed coupling connection between the prime mover and the reducer, check alignment per the coupling manufacturers recommendations. If the coupling is misaligned, the reducer alignment or shimming is incorrect. Re-align the gear reducer and re-check the high-speed coupling alignment before re-aligning the motor.

1. Solid shaft diameter tolerance

Reducer input and output shaft extensions have a diameter tolerance as specified in **Table 1**.

Table 1: Solid Shaft Diameter Tolerance

Above ø (in)	To & Including ø (in)	Tolerance (in)
0.375	1.750	+0.0000 / -0.0005
1.750	7.500	+0.0000 / -0.0010

Above ø (mm)	To & Including ø (mm)	Tolerance (mm)	ISO 286-2 Fit Class
10	18	+0.012 / +0.001	k6
18	30	+0.015 / +0.002	k6
30	50	+0.018 / +0.002	k6
50	80	+0.030 / +0.011	m6
80	120	+0.035 / +0.013	m6
120	180	+0.040 / +0.015	m6
180	190	+0.046 / +0.017	m6

2. Fitting drive elements onto the reducer solid shaft

Solid input and output shaft extensions are provided with a drill and tap feature as indicated in Table 2. When installing drive elements such as coupling hubs, pulleys, sprockets, or gears, NORD recommends using the threaded hole in the end of the shaft, along with a suitable assembly device fitted into the threaded hole.

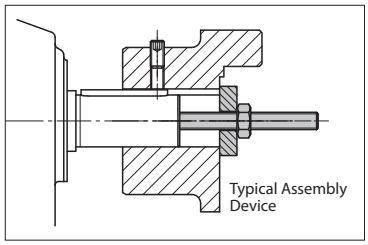

Table 2: Solid Shaft End - Threaded Holes

Above ø (in)	To & Including ø (in)	Tap size & Depth (in)
0.375	0.500	10-24 x 0.43 in
0.500	0.875	1/4-20 x 0.59 in
0.875	0.938	5/16-18 x 0.71 in
0.938	1.100	3/8-16 x 0.87 in
1.100	1.300	1/2-13 x 1.10 in
1.300	1.875	5/8-11 x 1.42 in
1.875	3.500	3/4-10 x 1.73 in
3.500	5.125	1-8 x 2.63 in
5.125	7.500	1 1/4 - 7 x 3.15

Above ø (mm)	To & Including ø (mm)	Tap Size & Depth (mm)
10	13	M4 x 10 mm
13	16	M5 x 12.5 mm
16	21	M6 x 16 mm
21	24	M8 x 19 mm
24	30	M10 x 22 mm
30	38	M12 x 28 mm
38	50	M16 x 36 mm
50	85	M20 x 42 mm
85	130	M24 x 50 mm
130	190	M30 x 60 mm

HARMFUL SITUATION

DO NOT DRIVE or **HAMMER** the coupling hub, pulley, sprocket, or gear into place. An endwise blow to the reducer shaft can generate damaging axial forces and cause damage to the reducer housing, bearings or internal components.

WARNING

To avoid serious injury the user must provide suitable safety guards for all rotating shafts and shaft components such as couplings, chain drives, belt drives, etc. All guarding must adhere to local regulations and safety standards.

3. Installing interference-fit hubs to the reducer shaft

Prior to installing any interference-fit hubs to the reducer shaft, consult with the manufacturer to determine proper assembly and fit. Interference-fits usually require heating the coupling, sprocket or gear hub, per the manufacturer's recommendations. Coupling hub installation typically follows ANSI/AGMA 9002-A86. Always make sure the reducer shaft seals are protected from the heat source. Apply uniform heat to the drive element hub to prevent distortion. NORD does not recommend heating the drive element hub beyond 212°F to 275°F (100°C to 135° C).

WARNING

When using heat to mount a drive element hub, do not use open flame in a combustible atmosphere or near flammable materials. Use suitable protection to avoid burns or serious injury.

HARMFUL SITUATION

When using external chain or belt drives, make sure the reducer is sized so that the shaft and bearings have adequate capacity. To avoid unnecessary bearing loads and additional shaft deflection, mount all power take-off devices (sprockets, pulleys, etc.) so that the applied load center is as close to the gear housing as possible and check component alignment and tension of any belts or chains per the manufacturer's recommendation. Do not over tighten the belts or chains.

4. Coupling installation

The performance and life of any coupling depends upon how well it is installed. Coupling hubs are typically mounted flush with the shaft ends, unless specifically ordered for overhung mounting. Shaft couplings should be installed according to the coupling manufacturer's recommendations for gap, angular and parallel alignment. To help obtain critical shaft alignment coupling hubs may be installed to the machine shafts prior to final shimming or tightening of the foundation bolts. Proper coupling alignment allows for thermal and mechanical shaft movement during operation and ensures that only torque (no radial load) is transmitted between the mating shafts.

Coupling gap and angular alignment

The shaft gap must be sufficient to accommodate any anticipated thermal or mechanical axial movement. When setting the coupling gap, insert a spacer or shim stock equal to the required spacing or gap between the coupling hub faces. Measure the clearance using feeler gauges at 90-degree intervals, to verify the angular alignment.

Parallel (or offset) alignment

Mount a dial indicator to one coupling hub, and rotate this hub, sweeping the outside diameter of the other hub. The parallel or offset misalignment is equal to one-half of the total indicator reading. Another method is to rest a straight edge squarely on the outside diameter of the hubs at 90° intervals and measure any gaps with feeler gauges. The maximum gap measurement is the parallel or offset misalignment.

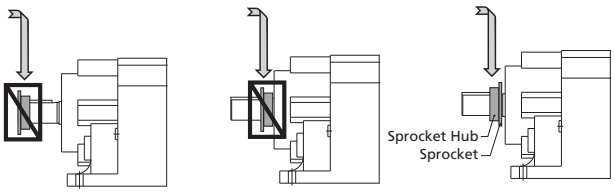
Check alignment

After both angular and parallel alignments are within specified limits, tighten all foundation bolts securely and re-check critical alignment. If any of the specified limits for alignment are exceeded, realign the coupling.

5. Installing sheaves (pulleys), sprockets and gears

To avoid unnecessary bearing loads and additional shaft deflection, mount all power take-off devices (sprockets, pulleys, gears, etc.) so that the applied load center is as close to the gear housing as possible, as shown in **Figure 2**.

Figure 2: Sprocket or Gear Mounting



Preferred Mounting of Sprocket or Gear

Align the driver sheave or sprocket with the driven sheave or sprocket by placing a straight-edge length-wise across the face of the sheaves or sprockets. Alignment of bushed sheaves and sprockets should be checked only after bushings have been tightened. Check horizontal shaft alignment by placing one leg of a square or a level vertically against the face of the sheave or sprocket.

Always check component alignment and tension any belts or chains per the manufacturer's recommendation. The ideal belt or chain tension allows proper wrap of the driver and driven wheels, while maintaining the lowest possible tension of the belts or chain, so that no slipping occurs under load conditions. Check belt or chain tension frequently over the first 24 to 48 hours of operation.

STOP *HARMFUL SITUATION* STOP

When using external chain or belt drives, make sure the reducer is sized so that the shaft and bearings have adequate capacity. To avoid unnecessary bearing loads and additional shaft deflection, mount all power take-off devices (sprockets, pulleys, etc.) so that the applied load center is as close the gear housing as possible and check component alignment and tension of any belts or chains per the manufacturer's recommendation. Do not over tension the belts or chains.

6. Outboard pinion gear alignment

Align outboard pinion gears and adjust the gear tooth clearance according to the manufacturer's recommendations, checking for acceptable outboard pinion tooth contact. The foundation bolts may have to be loosened and the gear unit moved slightly to obtain proper gear tooth contact. After the unit is moved to correct tooth contact, the prime mover may need to be realigned.

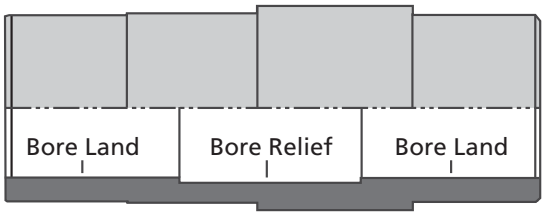
KEYED HOLLOW SHAFT

1. Keyed hollow shaft design

NORD uses high quality carbon steel to manufacture hollow-shafts. Upon request, NORD can provide alternate materials, such as stainless steel. NORD hollow shafts are designed with a bore relief (reduced contact area) between the mating shafts.

The bore relief provides a cavity to hold an anti-seize assembly paste. It also acts as a design feature intended to help prevent corrosion and to facilitate gearbox removal from the solid shaft.

NORD furnishes dual keys designed to be used in each of the bore land areas, as opposed to supplying a single long key. The dual keys are intended to simplify assembly onto the machine's solid shaft.



IMPORTANT NOTE

If a single shaft key or dual shaft keys are supplied by others, the key/s must engage the full bore-land length at each end of the hollow shaft.

2. Key and keyway dimensions

Unless otherwise indicated, inch keys and keyways follow the ANSI B17.1 standard and metric keys and keyways follow the DIN6885-1 standard. Inch bores will typically utilize square keys but in some instances the larger hollow shaft bore sizes utilize the alternate rectangular key shown in the ANSI B17.1 standard.

Key slots for the solid machine shaft should be made with a Class 2, transitional-fit class (slightly loose to slightly tight). Key slots in the female shaft are designed to be a low clearance fit. These suggested practices should allow for easier assembly with the mating solid shaft, without allowing excessive clearance which could cause keys to work loose during reducer operation.

IMPORTANT NOTE

If the key fit is too tight, light filing of the key sides and hand-fitting of the keys may be required.

3. Keyed hollow-shaft bore tolerances

Standard keyed hollow-shaft bore tolerances are shown in the following table.

Table 1 - Keyed hollow bore tolerances

Above ø [in]	To and Including ø [in]	Bore Diameter Tolerance ø [in]
0.4375	1.6250	+0.0010 / -0.0000
1.6250	3.2500	+0.0012 / -0.0000
3.2500	7.0000	+0.0014 / -0.0000

Above ø [mm]	To and Including ø [mm]	Bore Diameter Tolerance ø [mm]
10	18	+0.018 / -0.000
18	30	+0.021 / -0.000
30	50	+0.025 / -0.000
50	80	+0.030 / -0.000
80	120	+0.035 / -0.000
120	180	+0.040 / -0.000
180	190	+0.035 / -0.000

Metric hollow bore tolerances per ISO286-2, Class H7

4. Suggested solid shaft (machine shaft) tolerances

NORD recommends a close fit of the customer-supplied solid shaft or machine-shaft, for the following reasons:

- To help minimize the potential for fretting and corrosion.
- To help prevent excessive free play in the shaft connection that could lead to excessive load stress on the driven system, the gear drive, or both.

Table 2 - Suggested solid shaft tolerances

Above ø [in]	To and Including ø [in]	Shaft Diameter Tolerance Uniform Load ø [in]	Shaft Diameter Tolerance Shock Load ø [in]
0.4375	0.8750	+0.0000 / -0.0005	+0.0000 / +0.0005
0.8750	4.5000	+0.0000 / -0.0010	+0.0000 / +0.0010
4.5000	7.0000	+0.0000 / -0.0012	+0.0000 / +0.0015

Above ø [mm]	To and Including ø [mm]	Shaft Diameter Tolerance Uniform Load ❶ ø [mm]	Shaft Diameter Tolerance Shock Load ❷ ø [mm]
10	18	+0.000 / -0.011	+0.012 / +0.001
18	30	+0.000 / -0.013	+0.015 / +0.002
30	50	+0.000 / -0.016	+0.018 / +0.002
50	80	+0.000 / -0.019	+0.021 / +0.002
80	120	+0.000 / -0.022	+0.025 / +0.003
120	180	+0.000 / -0.025	+0.028 / +0.003
180	190	+0.000 / -0.029	+0.033 / +0.004

❶ **Uniform load: Mating shaft diameter tolerance per ISO286-2, class h6**

❷ **Shock load: Mating shaft diameter tolerance per ISO286-2, class k6**

As indicated in Table 2, different solid shaft tolerances are suggested depending upon the load type.

- If the machine load conditions are considered "Uniform" a clearance fit is allowed.
- If the machine load conditions are considered to have "Shock Load" a light clearance to interference fit condition is suggested.

Typically the machine builder will have good knowledge as to the load type. As an alternate method to classify load type, one could follow the "Mass Acceleration Factor Selection Method" that is discussed in NORD's product catalog/s.

Straightness, roundness, and diameter tolerance variations of both shafts should be controlled as accurately as possible. When mating, solid shaft design features are not controlled, reducer installation may be very difficult without ordering special hollow-bore design features to accomodate.

STOP *HARMFUL SITUATION* STOP

The supporting solid shaft or driven machine shaft must be of adequate size and strength to withstand normal operating loads and peak loads without damage to itself or any of the system components.

5. Suggested solid-shaft mating shaft surface finish

Controlling the mating shaft surface finish helps to assure proper fit and assembly while minimizing the possibility of corrosion and fretting. NORD recommends that the mating solid shaft surface should be at least 125 micro-inches (3.2 microns) or smoother.

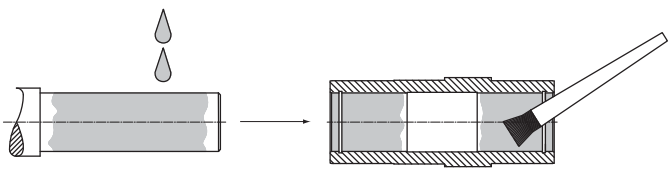
6. Assembly to the machine shaft

A. Clean and remove any dirt, grease, or rust-preventative coatings from both the reducer hollow shaft and the machine shaft.

B. Make sure the edges of both the reducer hollow shaft and machine shaft are free from any nicks or burrs. If nicks or burrs are present remove them using an abrasive material such as an emery cloth.

C. Before installing the gear reducer onto the machine shaft, apply an anti-seize compound or anti-corrosive lubricant to the mating shafts as shown in Figure 1. Assembly and subsequent dismantling will be aided by the anti-seize agent.

Figure 1 – Application of anti-seize to the mating shafts



Apply to machine shaft Apply to bore land area

D. Fit the shaft key/s into place on the machine shaft. Depending upon the key slot design on the machine shaft, it may be necessary to stake or Loctite® the key/s into place so they do not slide axially while fitting the reducer to the shaft.

E. Lift the gear unit assembly into place and align it carefully with respect to the machine shaft.

F. Fit the gear unit assembly onto the machine shaft using a suitable pulling device.

G. Secure the reducer onto the machine shaft in an axial direction, to prevent the reducer from shifting or walking out of place during operation.

STOP *HARMFUL SITUATION* STOP

Do not use excessive force or try to hammer the gear unit into place. The housing, shafting, bearings or gear wheels may become damaged.

7. Securing the reducer onto the machine shaft

There are slight shaft oscillations during operation in any rotating shaft equipment or any shaft-mounted reducer assembly. Therefore it is important to secure the reducer in an axial direction onto the machine shaft, to prevent the reducer from shifting or walking out of place during operation.

Possible methods to secure the reducer axially to the machine shaft include:

- Using commercial set collars, retaining rings, or snap rings.
- Using the optional "NORD Fixing Element Kit" (see U10280).

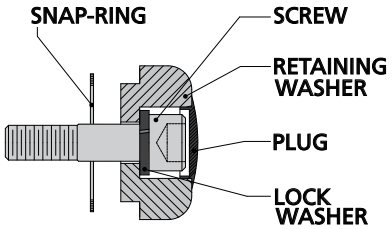
The NORD Fixing Element Kit includes all of the necessary parts to secure the shaft by using a tapped hole in the end of the mating male shaft.

Loctite® is a registered trademark of Loctite Corporation U.S.A. and Henkel.

1. Shaft fixing kit - basic design

The NORD Fixing Kit provides a method for securing the reducer in an axial direction, after the keyed-hollow shaft reducer is mounted onto the machine shaft. The fixing kit prevents the reducer from shifting or walking out of place during operation. NORD offers a variety of standard fixing kits, based upon bore size, as shown on Page 2 of this manual.

Figure 1 – Fixing kit components



IMPORTANT NOTE

For installation of the keyed-hollow bore reducer to the machine-shaft, see user manual U10270.

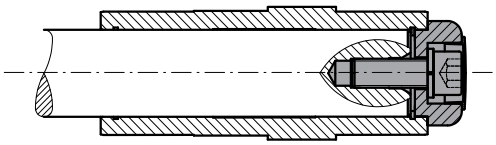
2. Assembly types

There are two types of assembly methods commonly used for securing the fixing kit.

Figure 2 – Fixing kit assembly methods

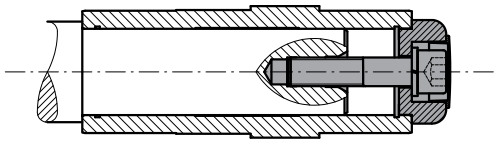
Type 1

The machine-shaft is located against a fixed snap-ring located inside the bore of the reducer.



Type 2

The machine shaft is shouldered and is pulled tight against the hollow-shaft; the snap-ring is no longer required.



HARMFUL SITUATION

The maximum edge break on the solid machine shaft must not exceed the values shown on Page 2 of this manual. Otherwise the load-bearing capacity of the snap-ring will be reduced and may result in failure.

3. Assembly

A. If using a Type 1 assembly, secure the appropriate snap-ring into the bore of the reducer. With Type 2 assembly, no snap-ring is required.

B. Draw the hollow bore gear reducer onto the machine shaft as instructed in U10270. Remember to apply a suitable assembly paste or anti-seize compound to the mating shafts.

C. Install the retaining washer over the end of the hollow bore.

D. Secure the appropriate cap-screw into the machine shaft and tighten the screw based upon the assembly type, as noted below. Then install the protective plug over the screw hole.

Type 1 - Screw tightening

Tighten until lightly snug and secure the screw with a thread-locking compound to prevent the screw from backing out.

HARMFUL SITUATION

Over tightening the retaining screw may cause the snap ring to be pulled out of its seating groove, causing damage to the hollow-bore or snap ring.

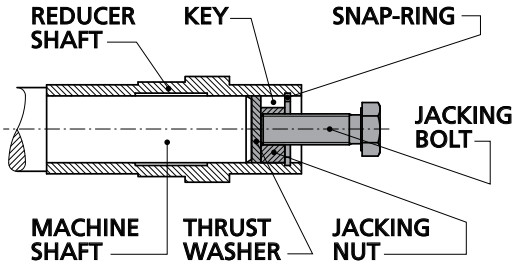
Type 2 - Screw tightening

Follow the cap screw manufactures guidelines and tighten the screw to the proper torque, based upon the bolt grade and material. For reference tightening torque values, also see manual U10060, Table 2.

4. Disassembly

When using Type 2 assembly, it is possible to design a simple disassembly tool to allow easier removal of the hollow-bore reducer. The solid shaft is shouldered to rest against the hollow-bore of the reducer. The machine shaft is supported in both of the hollow bore land areas, but the overall length is reduced compared to Type 1 assembly.

Figure 3 – Disassembly Tool



IMPORTANT NOTE

For suggestions on how to construct a disassembly tool for a particular reducer and bore size, please consult NORD's application engineering department.

5. Standard fixing kit size offerings

NORD offers a variety of standard fixing kit sizes as shown by the following tables.

Table 1 - Standard fixing kit size offerings

Shaft Bore [in]	Bolt Size	Allowable Thrust Groove ❷ lb [N]	Allowable Thrust Ring ❸ lb [N]	Max. Edge Break ❹ in [mm]
0.500	10-32	730 [3255]	520 [2300]	0.02 [0.5]
0.750	1/4-20	1800 [7905]	560 [2500]	0.04 [1]
1.000	3/8-16	2900 [13020]	1000 [4600]	0.04 [1]
1.188	7/16-14	5100 [22630]	1000 [4700]	0.04 [1]
1.250	7/16-14	5100 [22630]	1000 [4700]	0.04 [1]

110	M24	181350 [40800]	71000 [16000]	3.0 [0.12]
120	M24	196850 [44300]	70000 [15700]	3.0 [0.12]

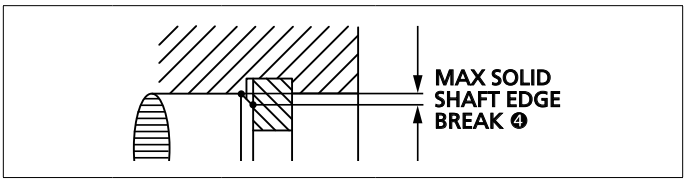
Upon request, additional hollow-bore sizes and fixing kit sizes may be offered.

❶ This fixing kit is not supplied with a snap-ring. A Type 2 machine shaft is required.

❷ Thrust load-bearing capacity of the groove is based upon using a hollow-shaft material with a yield-strength of at least 45,000 psi (310 N/mm²).

❸ Thrust load-bearing capacity of the snap-ring is based upon a typical snap-ring material with a yield-strength of at least 30,500 psi (210 N/mm²).

❹ On the solid machine shaft, observe the maximum edge break (radius or chamfer) shown. A larger edge break will result in reduced load-bearing capacity of the snap-ring.

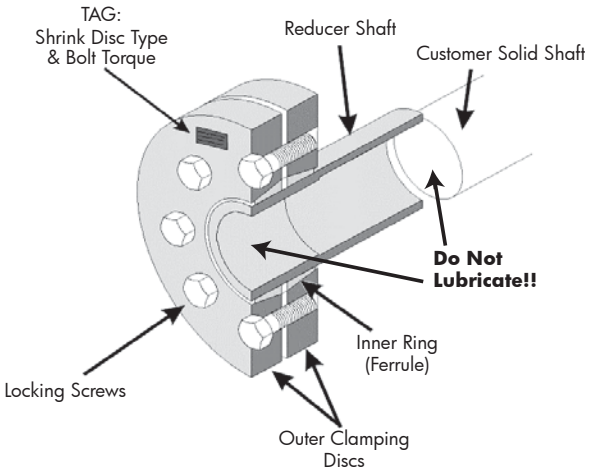


HOLLOW SHAFT WITH SHRINK DISC

1. Shrink disc design concept

A shrink disc option is adaptable to many NORD hollow-bore reducers. The shrink disc applies a high-capacity, zero backlash, interference fit to the driven machine shaft. The double tapered inner ring converts most all of the screw clamping load into radial contact pressure, as the outer clamping discs are pulled together by proper tightening of the locking screws. As the inner ring is contracted, the clearance between the customer solid shaft and reducer shaft is absorbed.

- In their relaxed state, shrink discs provide a generous assembly clearance, thus eliminating the typical assembly and disassembly challenges of using interference fits.
- Shrink discs also reduce solid machine shaft stresses by eliminating the need for shaft keys and keyways.
- When properly applied, high shrink fits help eliminate shaft fretting corrosion and allow for easier shaft mounting and dismounting.



2. Solid (machine) shaft design guidelines

Always use a solid shaft material of adequate strength and apply proper shaft fits in order to establish adequate clamping force during assembly and assure proper shaft release during disassembly.

- Use solid shaft material with yield strength of at least 52,260 psi (360 N/mm²).
- The solid machine shaft should be machined according to ISO 286-2, Class h6 fit tolerances, with a shaft finish of 125 micro inches (3.2 µm) or smoother, per Table 1.
- The solid machine shaft must extend the full length of the reducer hollow shaft.

STOP *HARMFUL SITUATION* **STOP**

Contact NORD when using a shrink disc in an application where the shrink disc connection must simultaneously transmit torque and thrust.

3. Safety

⚠ *WARNING* ⚠

- The supporting solid shaft or driven machine shaft must be of adequate size and strength to withstand normal operating loads and peak loads without damage to itself or any of the system components.
- The transmissible torque and the gripping capacity of the shrink disc may be reduced if shaft tolerances or clearances are larger than specified.
- Excessive tightening torque can result in permanent deformation of the inner ring and the reducer hollow bore, making disassembly very difficult. Do not over tighten the shrink disc to compensate for excessive clearance between the machine shaft and reducer bore.
- Observe the published ratings and safety factors for both the reducer and shrink disc. Overload conditions or excessively high torque can cause the shrink disc connection to slip. In extreme cases localized galling or welding of components may occur.

4. Shrink disc shaft tolerances

Recommended solid shaft tolerances and reducer bore tolerances are shown in the table below.

Table 1: Shrink disc shaft tolerances

Above & Including ø [in]	To & Including ø [in]	Solid Shaft Tolerance ø [in]	Reducer Bore Tolerance ø [in]	Max. Assembly Clearance [in]
0.7500	1.1250	+0.0000 / -0.0005	+0.0008 / -0.0000	0.0013
1.1250	1.9375	+0.0000 / -0.0006	+0.0009 / -0.0000	0.0015
2.0000	3.1250	+0.0000 / -0.0007	+0.0011 / -0.0000	0.0018
3.1875	4.6875	+0.0000 / -0.0008	+0.0013 / -0.0000	0.0021
4.7500	7.0625	+0.0000 / -0.0009	+0.0015 / -0.0000	0.0024
7.1250	7.5000	+0.0000 / -0.0011	+0.0018 / -0.0000	0.0029

Above ø [mm]	To & Including ø [mm]	Solid Shaft Tolerance ø [mm]	Reducer Bore Tolerance ø [mm]	Max. Assembly Clearance [mm]
18	30	+0.000 / -0.013	+0.021 / -0.000	0.034
30	50	+0.000 / -0.016	+0.025 / -0.000	0.041

80	120	+0.000 / -0.022	+0.035 / -0.000	0.057
120	180	+0.000 / -0.025	+0.040 / -0.000	0.065
180	190	+0.000 / -0.029	+0.046 / -0.000	0.075

Shaft/bore tolerances per ISO 282-6, Class h6/H7.

Solid shaft finish should be 125 micro inches (3.2 micro meters) or smoother.

HOLLOW SHAFT WITH SHRINK DISC

5. Installation

⚠ WARNING ⚠

Disconnect all power sources from the equipment before beginning this installation procedure. Handle the components with care and avoid all sharp machined edges to prevent personal injury.

STOP HARMFUL SITUATION STOP

Do not tighten any of the shrink disc locking screws prior to installing the reducer with shrink disc onto the machine shaft. The inner ring of the shrink disc can become permanently contracted or damaged at relatively low tightening torque.

A. Inspect the gear unit received. Make sure the shrink disc and extended hollow shaft projection is on the side of the reducer where it was specified or ordered.

B. Loosen the shrink disc locking screws but do not take the shrink disc completely apart. Remove and discard any packaging material or transportation spacers that come with the shrink disc.

C. Remove all burrs, rust, corrosion, lubricants, and foreign matter from the surfaces of the solid shaft and hollow-bore.

D. Make sure the shrink disk is positioned onto the hollow shaft until the outer clamping ring is flush with the edge of the hollow shaft.

E. To aid in assembly, it is acceptable to lightly grease the solid shaft, only in the area that will come in contact with the bronze-bushing side of the reducer hollow-shaft. ***The reducer hollow shaft must be completely de-greased and free of lubricant, especially in the area of the shrink disc.***

F. Position the gear reducer onto the solid machine shaft and make certain the area under the shrink disc is completely supported by the solid shaft.

G. After confirming the proper positioning of gear reducer and the shrink disc, hand tighten (3) or (4) equally spaced locking screws to make sure the outer collars of the shrink disc are drawn together in a parallel fashion. Then hand-tighten the remaining screws.

H. Refer to Table 2 for the specified tightening torques for the shrink disc locking screws. Using a properly set torque wrench using approximately ¼ (90°) turns; tighten the locking screws, by working in a circular clockwise or counterclockwise sequence around the shrink disc.

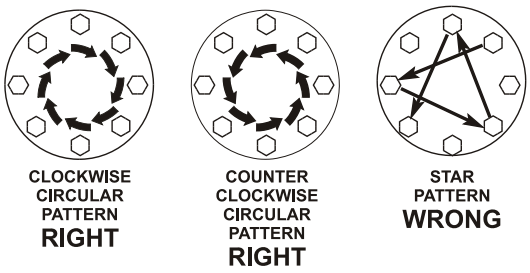
I. Continue the tightening sequence (Step H.) even if some locking screws initially require very low tightening torque to achieve ¼ turns; do this for several passes until ¼ turns can no longer be achieved.

J. Reset the torque wrench to approximately 3-5% over-torque and tighten the locking screws for 1 or 2 more passes. This procedure will compensate for relaxation of the locking screws, since tightening of a given screw will always tend to relax the adjacent screw. Without a slight overtorquing of the screws, an infinite number of passes would be required to reach the desired tightening torque.

Table 2 - Shrink Disc Locking Screw Torque

Screw Size	Wrench Size [mm]	Tightening Torque [Nm]	[lb-in]	[lb-ft]
M5	8	7	62	5.2
M6	10	12	106	8.9
M8	13	30	266	22
M10	17	59	522	44
M12	19	100	885	74
M16	24	250	2213	184
M20	30	490	4337	361
M24	36	840	7435	620
M30	46	1700	15050	1254

BOLT TIGHTENING PATTERN



K. Reset the torque wrench to the correct tightening torque as indicated in Table 2. Make sure each locking screw has been properly tightened until the screws are no longer turning at the specified torque wrench setting. If necessary repeat Steps G. & H.

6. Removal

A. Loosen the shrink disc locking screws in a circular pattern by using ½ (180°) turns, until the shrink disc hub can be moved or until the shrink disc hub and reducer shaft will return to their original fits.

⚠ WARNING ⚠

Do not completely remove the locking screws before the outer clamping disks of the shrink disc are disengaged from the inner ring. A sudden release of the outer collars will create high separating forces and could result in injury or even death.

B. Loosen the outer collars of the shrink disc from the tapered inner ring. This may require tapping the bolts with a **soft faced** hammer or prying lightly between the outer collars.

C. Remove the gear reducer from the machine shaft.

7. Re-installation

A. It may be possible to re-use the shrink disc. However the shrink disk should not be re-used if it becomes damaged during removal, or excessively rusty or corroded. Shrink discs must always be disassembled and thoroughly cleaned before re-using.

B. After cleaning the shrink disc, lubricate between the taper of the outer clamping disks and the outside of the inner ring using MOLYKOTE® G-Rapid Plus Paste (product of Dow Corning) or equivalent. In addition, grease screw threads and head contact area with multi-purpose grease.

NORD GRIPMAXX™

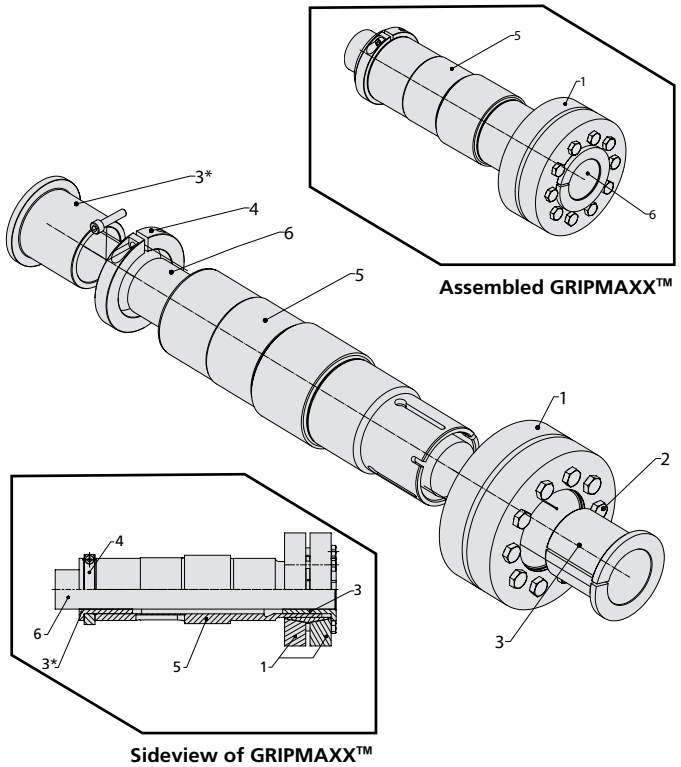
1. General information

The NORD GRIPMAXX™ keyless bushing system is adaptable to most all NORD shaft-mounted reducers. The bushing system offers interchangeable bushings to accommodate a large range of driven machine-shaft sizes.

The unique design of the NORD GRIPMAXX™ bushing system offers a number of distinct advantages as follows:

- The NORD GRIPMAXX™ allows the machine builder to utilize standard cold finished shaft stock, without the need for additional shaft machining or shaft keys.
- It uses a NORD shrink disc to apply a high-capacity, zero backlash, interference fit to the driven machine shaft, while eliminating the typical assembly and disassembly challenges of using interference fits.
- The built in clearance between the customer shaft and the bushing system helps to ensure easy installation and removal of the gearbox. To help ensure easy removal, the NORD GRIPMAXX™ bushings are prepared with a special low-wear, corrosion-resistant hardened surface treatment, that minimizes the formation of shaft corrosion and fretting.
- The NORD GRIPMAXX™ is ideal for start-stop operation and bi-directional loading because it does not depend on keys or keyways that transmit torque, which can also can become loose or deform when subjected to these loading conditions.
- Unlike the typical conical or tapered bushing kits, the NORD GRIPMAXX™ design allows a tight fit against a shouldered machine shaft.
- The torque bushing and support bushing are the same part and are fully interchangeable with one another.

2. GRIPMAXX™ assembly detail



Assembled GRIPMAXX™

Sideview of GRIPMAXX™

[1] NORD Shrink Disc
[2] Locking Screw
[3] Bushing (Torque Side)
[3*] Bushing (Support Side)
[4] Clamp Ring
[5] Gear Reducer Hollow Shaft
[6] Machine Shaft

IMPORTANT NOTE

NORD recommends that the machine shaft have a yield strength of at least 52,260psi (360N/mm^2)

IMPORTANT NOTE

Observe the recommended machine shaft tolerances in table 1, page 2.

WARNING

The supporting solid shaft or driven machine shaft must be of adequate size and strength to withstand normal operating loads and peak loads without damage to itself or any of the system components.

3. Installation

⚠ WARNING ⚠

Disconnect all power sources from the equipment before beginning this installation procedure. Handle the components with care and avoid all sharp or machined edges to prevent personal injury.

STOP HARMFUL SITUATION STOP

Do not tighten any of the shrink disc locking screws prior to installing the reducer with shrink disc onto the machine shaft. The inner ring of the shrink disc can become permanently contracted or damaged at a relatively low tightening torque.

Table 1 - Required Machined Shaft Tolerance

Inch Machine Shaft			Metric Machine Shaft		
From ø [in]	To ø [in]	ISO 286-2 Tolerance h11(-) [in]	Over ø [mm]	Including ø [mm]	ISO 286-2 Tolerance h11(-) [mm]
0.4375	0.6875	- 0.004	10	18	- 0.11
0.7500	1.0625	- 0.005	18	30	- 0.13
1.1250	1.9375	- 0.006	30	50	- 0.16
2.0000	3.1250	- 0.007	50	80	- 0.19
3.1875	4.6875	-0.008	80	120	-0.22
4.7500	4.7500	-0.009	120	125	-0.25

A. Carefully inspect the machine shaft [6] and remove all burrs, rust, corrosion, lubricants, and foreign matter from the shaft surface. Verify that the diameter is within the dimensional tolerances shown in Table 1.

B. Inspect the gear unit received to confirm the correct position of the shrink disc [1]. Make sure the hollow shaft [5] projection is on the side of the reducer where it was specified or ordered.

C. In addition to cleaning the machine shaft [6], remove all dirt, grease or oils from the reducer hollow shaft [5], bushings [3], clamp ring [4], and shrink disk [1]. ***Do not apply lubricants, corrosion preventatives, anti-sieze compounds or coatings to the mating surfaces of the shaft, bushings, clamp collars or shrink disc.***

D. Position the clamp ring [4] and support bushing [3*] over the machine shaft [6], making sure the support bushing is in its desired location. Then secure the support bushing [3*] with the clamp ring [4] and tighten the clamp ring screw.

E. Slide the gear reducer onto the machine shaft [6] until the gear reducer stops against the secured support bushing [3*].

F. Without taking the shrink disc [1] apart, loosen the shrink disc locking screws [2]. Slide the shrink disk over the reducer shaft [5] and slide the torque bushing [3] onto the machine shaft, making sure it is seated completely.

G. Confirm the positioning of the shrink disc [1] and torque bushing [3]. ***Do not tighten the shrink disc until the machine shaft and torque bushing are in proper position, or the reducer shaft will be damaged.*** Hand-tighten 3 or 4 or locking screws [2] and make sure the outer collars of the shrink disc are drawn together in a parallel fashion and then hand-tighten the remaining screws.

H. Refer to Table 2 for the specified tightening torques for the shrink disc locking screws. Using a properly set torque wrench using approximately ¼ (90°) turns; tighten the locking screws, by working in a circular clockwise or counterclockwise sequence around the shrink disc.

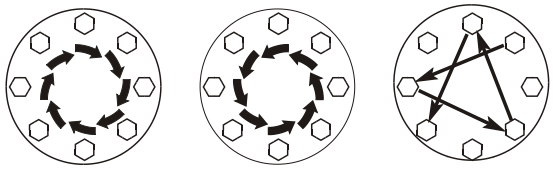
I. Continue the tightening sequence (Step H.) even if some locking screws initially require very low tightening torque to achieve ¼ turns; do this for several passes until ¼ turns can no longer be achieved.

J. Reset the torque wrench to approximately 3-5% over-torque and tighten the locking screws for 1 or 2 more passes. This procedure will compensate for relaxation of the locking screws, since tightening of a given screw will always tend to relax the adjacent screw. Without a slight overtorquing of the screws, an infinite number of passes would be required to reach the desired tightening torque.

Table 2 - Shrink Disc Locking Screw Torque

Screw Size	Wrench Size [mm]	Tightening Torque [Nm]	[lb-in]	[ft-lb]
M5	8	7	62	5.2
M6	10	12	106	8.9
M8	13	30	266	22
M10	17	59	522	44
M12	19	100	885	74
M16	24	250	2213	184
M20	30	490	4337	361

BOLT TIGHTENING PATTERN



K. Reset the torque wrench to the correct tightening torque as indicated in Table 2. Make sure each locking screw has been properly tightened until the screws are no longer turning at the specified torque wrench setting. If necessary repeat Steps G. & H.

5. Bushing kit removal

A. Loosen the shrink disc locking screws [2] in circular pattern by using ½ (180°) turns, until the shrink disc hub can be moved or until the shrink disc hub and reducer shaft will return to their original fits.

> ⚠ ***WARNING*** ⚠
>
> Do not completely remove the locking screws before the outer clamping disks of the shrink disc are disengaged from the inner ring. A sudden release of the outer collars will create high separating forces and could result in injury or even death.

B. Loosen the outer collars of the shrink disc from the tapered inner ring. This may require tapping the bolts with a **soft faced** hammer or prying lightly between the outer collars.

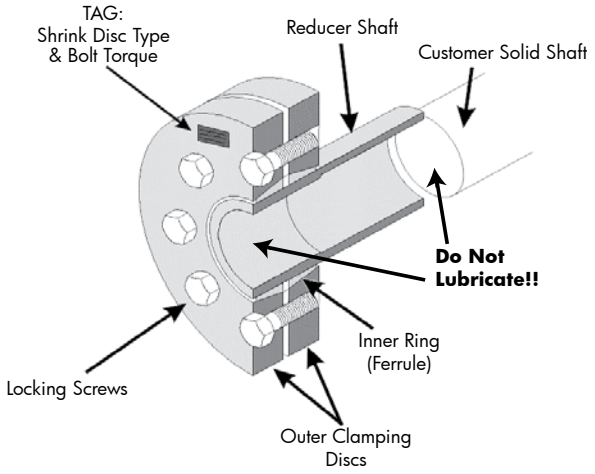
C. Remove the gear reducer from the machine shaft.

6. Re-installation

A. It may be possible to re-use the bushings and shrink disc that are part of the NORD bushing system. However these components should not be re-used if they are damaged during removal, or excessively rusty or corroded.

B. Never re-use any of the bushing kit components without prior cleaning. Shrink discs must always be disassembled and thoroughly cleaned before re-using.

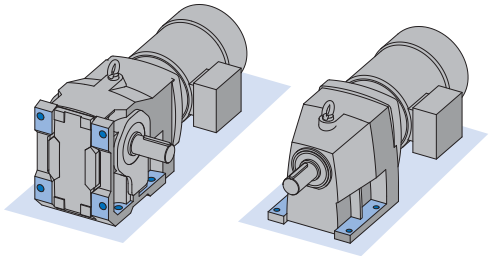
C. After cleaning the shrink disc, lubricate between the taper of the outer clamping disks and the outside of the inner ring using MOLYKOTE® G-Rapid Plus Paste (product of Dow Corning) or equivalent. In addition, grease screw threads and head contact area with multipurpose grease.



REDUCER MOUNTING
FOOTED & FLANGE MOUNT GEAR UNITS

1. Foot-mounted reducers

When installing the foot-mounted gear unit, observe the flatness specifications and bolt tightening torque guidelines provided in U10060 and make sure the mating mounting surface and reducer feet are clean and free of debris. Use of shims under the feet of the gear unit may be required in order to align the output shaft to the driven equipment. Make sure that all feet are supported so that the housing will not distort when it is bolted down. Improper shimming will cause mis-alignment and may reduce the life of the gear unit or cause component failure. Dowel pins may be field-installed to help prevent misalignment and ensure proper realignment if removed for service.



IMPORTANT NOTE

Gear units may be subjected to radial loads or side pull, caused by external chain drives or belt drives. In these instances it is recommended that the mounting base be designed with a slide-plate adjustment to accommodate extra slack in the chain or the belt after the feet are loosened. When using an external chain or belt drive, make sure the reducer is sized so that the shaft and bearings have adequate capacity.

2. Flange-mounted reducers (with B5 flange)

When using the B5 flange to mount the gear unit, the bulk head plate must be engineered to minimize buckling distortions and support the cantilevered weight of the gear reducer or gearmotor. On the B5 mounting flange NORD provides a pilot register or and the flange pilot tolerance as listed per Table 1. When the mating hole is designed with the proper fit, the flange pilot tenon provides a means of accurately positioning the reducer while the hold-down bolts are properly secured; once the reducer is secured, the tenon helps prevent movement of the reducer and it helps locate the center of the reducer output shaft.

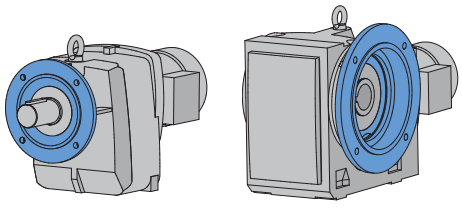


Table : Flange Pilot Tolerance

Above ø (in)	To & Including ø (in)	Tolerance (in)	ISO 286-2 Fit Class
1.969	3.150	+0.0005 / -0.0003	j6
3.150	4.724	+0.0005 / -0.0004	j6
4.724	7.087	+0.0006 / -0.0004	j6
7.087	9.055	+0.0000 / -0.0005	h6
9.055	9.843	+0.0000 / -0.0011	h6
9.843	12.402	+0.0000 / -0.0013	h6
12.402	15.748	+0.0000 / -0.0014	h6
15.748	19.685	+0.0000 / -0.0016	h6

Above ø (mm)	To & Including ø (mm)	Tolerance (mm)	ISO 286-2 Fit Class
50	80	+0.012 / -0.007	j6
80	120	+0.013 / -0.009	j6
120	180	+0.014 / -0.011	j6
180	230	+0.000 / -0.013	h6
230	250	+0.000 / -0.029	h6
250	315	+0.000 / -0.032	h6
315	400	+0.000 / -0.036	h6
400	500	+0.000 / -0.040	h6

When installing the flange mounted gear unit, observe the flatness specifications and bolt tightening torque guidelines provided in U10060. Make sure the mating mounting surface and reducer flange are clean and free of debris. Use a straight edge or parallel bar to check for high spots on the mating mounting surface and remove any raised material around the mounting holes.

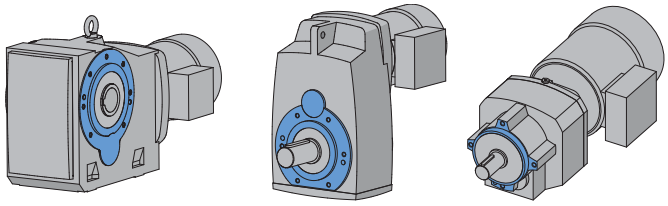
Set the gear unit into place and tighten the bolts until they are snug. Before final bolt-tightening check for any material gaps between the mating surfaces and if shimming is required, use "U" shaped shims at least 2 times the width of the bolt. Avoid over shimming a very irregular surface as this will make it very difficult to achieve proper alignment.

IMPORTANT NOTE

For heavy shock applications, it is advisable to field-install dowel pins through the mounting flange connection (in addition to the mounting bolts). This will help control flange movement or flange rotation and relieve the mounting bolts from this additional stress.

3. Flange-mounted reducers (with B14 flange)

When using the B14 flange to mount the gear unit, the bulk head plate must be engineered to minimize buckling distortions and support the cantilevered weight of the gear reducer or gearmotor. When properly installed, the output flange of the reducer housing is designed to enable the permissible torques and radial forces to be reliably transmitted by the bolt connections.



IMPORTANT NOTE

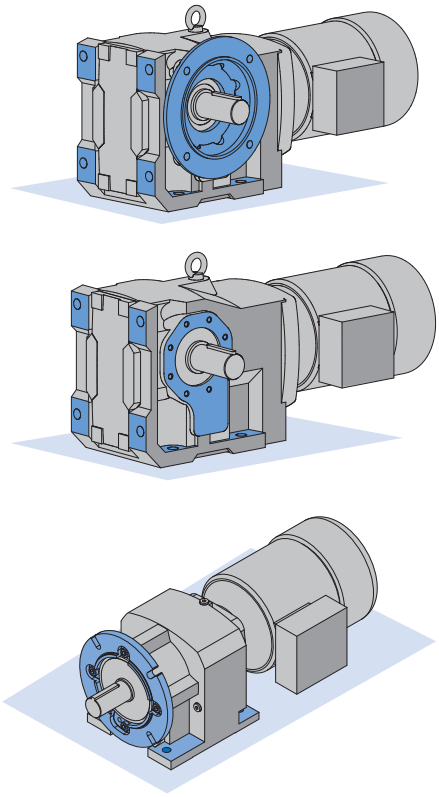
When using the B14 flange-face for mounting, if dowel pin holes are provided in addition to the threaded holes, then it is advisable to also use the proper dowel pins, to help control flange movement or flange rotation and relieve the mounting bolts from this additional stress This is especially important for heavy shock applications.

4. Foot & flange reducer housings

Some gear reducer housings are available with a foot and an output flange. Units with a foot and a B5 Flange are designated with the suffix XF after the primary model number and units with a B14 face-flange are designated with the suffix XZ after the primary model number. When a gear unit is provided with both a foot and a flange, the foot is consider the primary mounting surface. The flange is generally considered to be the secondary mounting option and it is intended that this surface be used for auxiliary add on elements that place minimal load stress on the reducer housing.

HARMFUL SITUATION

To prevent overstress on the main gear unit housing, never tighten the reducer mounting feet and the mounting flange against one-another. Auxiliary add-on elements that are mounted to the reducer flange, must not transmit excessive force, torque or vibration to the main gear housing.

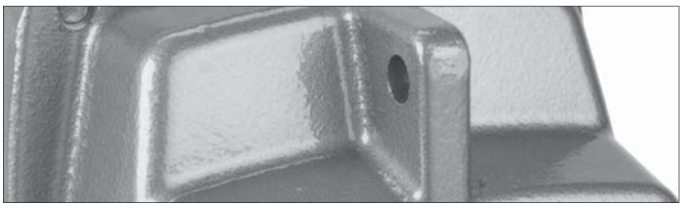


CLINCHER™ SHAFT-MOUNT WITH RUBBER BUFFERS

1. Purpose of the built-in torque arm lug

The preferred method of installing a shaft-mounted Clincher™ reducer is to support the weight of the gear unit or gearmotor assembly from the driven solid machine shaft. In order to restrain the gearbox, react the torque, and keep the gear unit from spinning around the shaft, the Clincher™ gear units have a built-in torque arm lug or tab cast into the reducer housing. This torque tab is intended to be used in conjunction with the NORD Rubber Buffers.

Figure 1: Built-in torque lug



2. Rubber buffers

When specified, NORD provides two rubber buffers that are installed on either side of the gear unit's integral torque lug.

When properly used in tandem, on either side of the torque-arm lug, the rubber buffers help isolate and absorb the load forces present in the system and increase the reducer's service life by reducing cumulative torsional shock loads.

- The primary load force acts in the direction of driven shaft rotation, reacts the torque of the reducer, keeping the gearbox from spinning on the shaft.
- Additional forces present themselves in the direction opposite of the shaft rotation, due to the typical slight out-of-round condition present in the machine shaft. This condition is the reason most shaft mounted-reducers have a slight shaft-wobble, which is normal.

For further dampening it is possible to combine several rubber buffers in a row, on either side of the torque lug.

IMPORTANT NOTE

Please reference Table 1 on page 2 of this manual for dimensional information.

HARMFUL SITUATION

Always mount at least one rubber buffer on either side of the reducer's torque-arm lug. When using rubber buffers in tandem, make sure equal numbers are used on both sides of the torque tab. Failure to do so will not properly cushion the reducer and can result in excessive binding, bearing stress, and damage to the reducer.

3. Machine support

WARNING

It is the responsibility of the machine builder to design a support bracket of adequate strength and rigidity, and supply an appropriate tightening bolt assembly. Failure to do so may result in injury caused from a damaged or broken torque-reaction assembly.

A single customer-supplied machine support bracket, of adequate strength and rigidity, can provide adequate restraint for both directions. This is because when the rubber buffer system is used, the applied load forces are always parallel to the retaining bolt and there are no twisting forces induced onto the bolt in either the clockwise or counter-clockwise direction. In some cases the customer may desire to supply a rigid support on either side of the rubber buffers. In these instances, longer assembly hardware is required.

4. Installation of the rubber buffers

A. Install the Clincher™ hollow bore reducer onto the machine shaft. Line up the hole in the reducer's torque-arm lug with the hole in the machine's support bracket and temporarily hold the reducer in place.

B. Properly secure the gear unit assembly to the driven shaft in an axial direction. If using the NORD Shaft Fixing Kit, follow the instructions in User Manual U10280.

C. Install the rubber buffers on either side of the gear unit's torque-arm lug. Apply a thread locking compound to the end of the fixing bolt. Then place the fixing bolt through the rubber buffers, torque-arm lug and rigid machine support bracket and loosely secure the nut onto the end of the bolt.

D. Tighten the fixing bolt and nut until lightly snug until all of the free play is eliminated from the rubber buffer assembly. Then snug the fixing bolt assembly by tightening an additional 1/4 to 1/2 turn.

WARNING

To help prevent damage to the rubber buffers, avoid over-tightening.

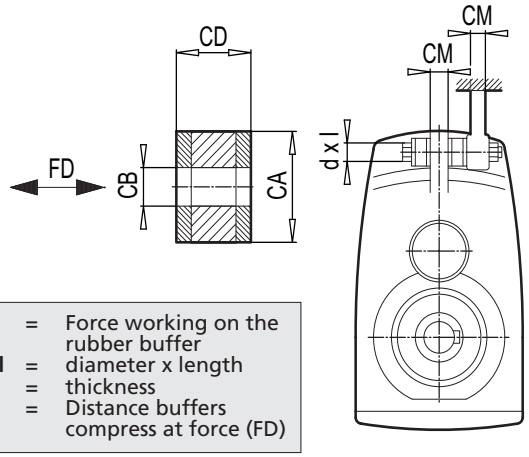
IMPORTANT NOTE

- A min. of (2) rubber buffers are required for each unit.
- For larger size CLINCHER'S™, NORD offers the heavy-duty rubber buffer (Option VG).
- A metric fixing bolt is preferred for rubber buffer assembly. NORD recommends a minimum ISO Grade 8.8 fixing bolt.

CLINCHER™ SHAFT-MOUNT WITH RUBBER BUFFERS

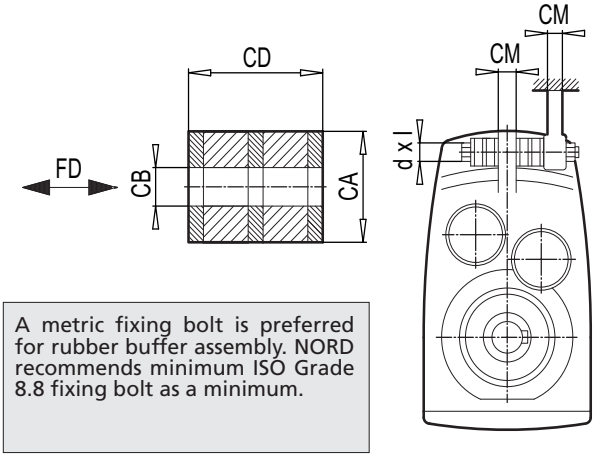
Table 1: Rubber buffer assembly/typical dimensions

Standard Rubber Buffer Assembly Option **(G)**



FD = Force working on the rubber buffer
d x l = diameter x length
c = thickness
S_{FD} = Distance buffers compress at force (FD)

Heavy Duty Rubber Buffer Assembly Option **(VG)**



A metric fixing bolt is preferred for rubber buffer assembly. NORD recommends minimum ISO Grade 8.8 fixing bolt as a minimum.

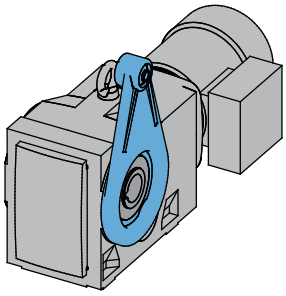
RIGHT-ANGLE SHAFT-MOUNT WITH TORQUE ARM (D)

1. Torque arm (D)

The preferred method of installing a shaft-mounted reducer is to support the weight of the gear unit or gearmotor assembly from the driven solid machine shaft. A torque arm is required in order to restrain the gearbox, react the load torque, and keep the gear unit from spinning around the shaft.

The Torque-Arm (D) bracket is mounted to either side of the right-angle gear unit using mounting screws that thread into the B14 flange-face of the reducer. The anchor hole of the torque-arm bracket is supplied with a resilient rubber bushing.



IMPORTANT NOTE

The side of the reducer that the torque arm is mounted on, and the angular position can be specified at time of order. Consult the appropriate NORD catalog for specific Torque Arm (D) mounting options and ordering guidelines.

2. Purpose of the built-in resilient rubber bushing

The resilient rubber bushing installed into the anchor hole end of the torque-arm helps isolate and absorb all the load forces present in the system and increase the reducer's service life by reducing cumulative torsional shock loads.

- The primary load force acts in the direction of driven shaft rotation, reacts the load torque of the reducer, and prevents the gearbox from spinning on the shaft.
- Additional forces present themselves in the direction opposite of the shaft rotation, due to the typical slight out-of-round condition present in the machine shaft. This condition is the reason most shaft mounted-reducers have a slight shaft-wobble, which is normal.

HARMFUL SITUATION

Always make sure that the Torque Arm (D) has the resilient rubber bushing installed into the anchor hole end of the torque arm. Failure to do so will not properly cushion the reducer and can result in excessive binding, bearing stress, and damage to the reducer.

3. Machine support

The user must supply a suitably strong and rigid mating machine support that provides load bearing capacity on both sides of the torque-arm bracket.

WARNING

It is the responsibility of the machine builder to design a support bracket of adequate strength and rigidity, and supply an appropriate tightening bolt assembly. Failure to do so may result in injury caused from a damaged or broken torque-reaction assembly.

4. Installation of a right-angle reducer with torque arm

A. Make sure the Torque-Arm (D) is mounted in the correct position on the reducer. Assembled screw heads should always sit flush with the torque arm.
   - To reposition the torque-arm, remove the mounting screws, relocate the torque-arm, and reassemble the mounting screws as noted above.
   - If the torque-arm was shipped loose, position the torque-arm in the correct location on the gear unit, and secure the torque-arm as noted above.

IMPORTANT NOTES

- Torque arm mounting screws should be secured with a thread locking product (ex. Loctite® 242 or Loxeal® 54-03) and tightened per the table on page 2.
- Assembled screw heads should always sit flush with the torque arm.
- The support bracket should provide support on both sides of the torque arm or be in the form of a U-shape.
- Do not force the torque-arm. The torque arm must remain at a right angle to the gear unit.
- If mounting holes do not align properly the machine support may need to be moved.

B. Install the right-angle hollow bore reducer onto the machine shaft. Then line up the hole in the reducer's torque-arm with the hole in the machine's support bracket, and temporarily hold the reducer in place.

C. Apply a thread locking compound such as Loctite® 242 or Loxeal® 54-03 to the end of the anchor bolt that is used to secure the torque arm in place.

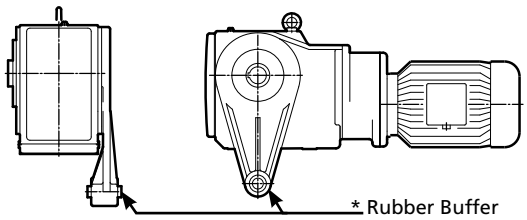
D. Place the anchor bolt through the support bracket and the reducer torque-arm. Attach the mating nut to the bolt and tighten the assembly until snug. At least one bolt diameter should protrude from the nut after assembly.

WARNING

Do not force misalignment of the torque-arm. The torque arm must remain at a right angle to the gear unit or excessive load may be placed on the reducer shaft and bearings.

E. Properly secure the gear unit assembly to the driven shaft in an axial direction.

Table 1 - Torque Arm (D) with rubber buffer



- For all 90.1 Series Helical-Bevel gear units, NORD also offers a bottom mount Torque Arm (K). See User Manual U10620.
- For the large 90.1 Series Helical-Bevel gear units sizes: SK9082.1, SK9086.1, SK9092.1, and SK9096.1, please use the Torque Arm (K).
- A metric fixing bolt is preferred for fastening the Torque-Arm(D) to the machine support bracket.

Gear Unit Series	Torque Arm				Torque Arm Mounting Screw

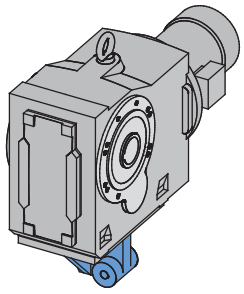
90.1 HELICAL-BEVEL SHAFT-MOUNT WITH BOTTOM MOUNT TORQUE ARM (K)

1. Torque arm (K)

The preferred method of installing a shaft-mounted reducer is to support the weight of the gear unit or gearmotor assembly from the driven solid machine shaft. A torque arm is required in order to restrain the gearbox, react to the load torque, and keep the gear unit from spinning around the shaft.

Table 1 (Page 2) provides a list of Torque-Arm (K) part numbers available for the 90.1 Series Helical-Bevel gear units. The Torque Arm (K) is secured to the base of the reducer. On most sizes there is an integral resilient rubber bushing located at the fastening hole-end of the torque arm. On the larger sizes, rubber buffers are used in conjunction with the torque arm and when properly used they are applied in tandem, on either side of the torque arm lug.



IMPORTANT NOTE

When ordering the Torque Arm (K) one can specify which side of the reducer to mount the fastening hole that bolts to the machine support bracket. Consult the appropriate NORD catalog for specific Torque Arm (K) mounting options and ordering guidelines.

2. Purpose of the rubber bushing or rubber buffers

Regardless if the Torque Arm (K) is supplied with the integral rubber bushing or whether separate rubber buffers are required, the bushing/buffers help isolate and absorb all the load forces present in the system and increase the reducer's service life by reducing cumulative torsional shock loads.

- The primary load force acts in the direction of driven shaft rotation, reacts the load torque of the reducer, and prevents the gearbox from spinning on the shaft.
- Additional forces present themselves in the direction opposite of the shaft rotation, due to the typical slight out-of-round condition present in the machine shaft. This condition is the reason most shaft mounted-reducers have a slight shaft-wobble, which is normal.

HARMFUL SITUATION

Always make sure that the Torque Arm (K) is used in conjunction with the required rubber bushing/s. Failure to do so will not properly cushion the reducer and can result in excessive binding, bearing stress, and damage to the reducer.

3. Machine support

The user must supply a suitably strong and rigid mating machine support that provides load bearing capacity on both sides of the machine support bracket.

WARNING

It is the responsibility of the machine builder to design a support bracket of adequate strength and rigidity, and supply an appropriate tightening bolt assembly. Failure to do so may result in injury caused from a damaged or broken torque-reaction assembly.

4. Installation of the right-angle reducer with torque arm (K)

A. Make sure the Torque-Arm (K) is mounted so that the machine fastening hole is on the correct side of the reducer.
   - The torque-arm can be repositioned on the as-received unit by removing the fixing screws, re-position the torque-arm in the correct location, and re-securing the fixing screws to the proper tightening torque, as indicated in Table 2 (Page 2).
   - If the torque-arm was shipped loose, position the torque-arm in the correct location on the gear unit, and secure the torque-arm with the proper fixing screws & tightening torque, as indicated in Table 2 (Page 2).

B. Install the right-angle hollow bore reducer onto the machine shaft. Line up the hole in the reducer's torque-arm with the hole in the machine's support bracket ,and temporarily hold the reducer in place

C. Properly secure the gear unit assembly to the driven shaft in an axial direction.

D. Apply thread locking compound to the end of the fixing bolt, then place the fastening bolt through the rigid machine support bracket and reducer torque-arm and loosely secure the nut onto the end of the bolt.

E. If the torque arm has an integral rubber bushing follow step F and skip steps G-H. If the torque arm uses rubber buffers skip forward to steps G-H.

F. Tighten the fixing bolt to the proper tightening torque as indicated in Table 2 (Page 2).

G. Install the rubber buffers on either side of the gear unit's torque-arm lug and place the fixing bolt through the rubber buffers and torque-arm lug and into the rigid machine support bracket.

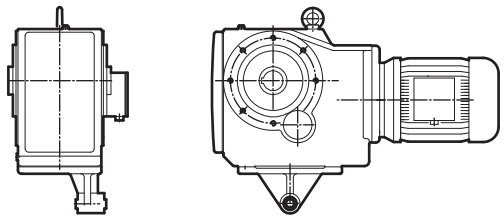
H. Tighten the fixing bolt and nut lightly snug, until all the free-play is eliminated from the rubber buffer assembly. Then snug the fixing bolt assembly by tightening an additional ¼ to ½ turn.

WARNING

To prevent damage to the rubber buffers, avoid over-tightening.

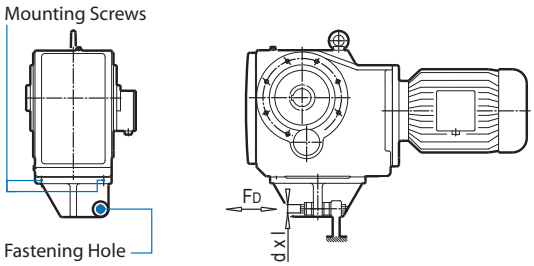
90.1 HELICAL-BEVEL SHAFT-MOUNT WITH BOTTOM MOUNT TORQUE ARM (K)

Torque Arm (K) with integrated bushing



Available for Sizes SK9012.1 - SK9072.1

Torque Arm (K) with rubber buffer



Available for Sizes SK9082.1 - SK90906.1

- For most all 90.1 series Helical-Bevel gear units, an optional tear-drop shaped side -mounted torque arm (D) is available. See user manual U10600.
- A metric fixing bolt is preferred for fastening the torque arm (K) to the machine support bracket.

HELICAL & BEVEL REDUCER LUBRICATION

1. Importance of proper lubrication

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective "fluid boundary" between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

Most NORD reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position.

2. Standard oil type

The following tables indicate the standard oil fill type used. Please see user manual U11000 for more specific information and for optional helical and bevel gear lubricants:

Serviceable Gear Units	
Helical In-line	Standard Oil Fill: ISO VG 220, Mineral Oil
Clincher Parallel-Shaft	
Right-Angle Bevel	
NORDBLOC® Series In-line	
NORDBLOC®.1 Series In-line	
Standard Series In-line	

IMPORTANT NOTE

For shipping purposes, the following large Clincher™ gear units are supplied without oil:
• Clincher™ Sizes SK11282, SK11382 and SK12382

Maintenance-free / Lubricated For Life Gear Units	
Clincher™ sizes SK0182NB, SK0282NB & SK1382NB	Standard Oil Fill: ISO VG220 SHC/PAO Synthetic Oil
NORDBLOC® Sizes SK172, SK272, SK371F, SK372, SK373, SK320	

IMPORTANT NOTE

Maintenance-free units are supplied as sealed units with no vent-plug. Consult NORD prior to ordering if interested in ordering any of the above sizes as serviceable gear units.

IMPORTANT NOTE

Consult the sticker adjacent to the fill plug to determine the type of lubricant installed at the factory. Some units have special lubricants designed to operate in certain environments or intended to extend the service life or service temperature range of the lubricant. If in doubt about which lubricant is needed for a certain application, please contact NORD Gear.

3. Lubrication replacement

If the gear unit is filled with mineral oil, the lubricant should be replaced at least after every 10,000 operating hours or after every two years. If the gear unit is filled with synthetic oil, the lubricant should be replaced at least after every 20,000 operating hours or after every four years. Often gear reducers are exposed to extreme ambient conditions, hostile environments, wet conditions, or dirty and dusty operating areas. Especially in these situations, it is important to establish a condition-based oil service interval.

4. Oil viscosity

Viscosity, or the oil's resistance to shear under load, is often considered the single most important property of any gear oil.

- Often one will consider making a viscosity correction to the oil to improve the performance when operating the gear unit at low temperature or high temperature.
- In cases of extreme load conditions, gear pairs and antifriction bearings may be more susceptible to sliding or scuffing wear. In these operating conditions, it may also be beneficial to consider an increased lubrication viscosity and/or a lubrication with improved antiwear additive packages.

IMPORTANT NOTE

The user should consult with their primary lubrication supplier before considering changes in oil type or viscosity.

5. Maximum oil sump temperature limit

To prevent reducer overheating, the reducer's maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Mineral	80-85°C (176-185°F)	95°C (203°F)
Synthetic	105°C (220°F)	107°C (225°F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

6. The importance of routine oil analysis

Routine oil analysis, sound lubrication practices, and good tracking of oil performance trends will help establish proper lubrication maintenance and change-out intervals. To maximize equipment reliability, NORD Gear generally recommends a condition-based lubrication maintenance program. One may take exceptions to this general recommendation on sealed-for-life or maintenance-free gear units or smaller and less costly gear units. In these instances, the replacement cost of the gear unit is often small compared to the costs associated with this type of oil analysis program.

STOP *HARMFUL SITUATION* **STOP**

NORD suggests replacing the gear oil if oil analysis indicates any of the following:

- Viscosity has changed by approximately 10% or more.
- Debris particles (silicon, dust, dirt or sand) exceed 25 ppm.
- Iron content exceeds 150-200 ppm.
- Water content is greater than 0.05% (500 ppm).
- The total acid number (TAN) tests indicate a significant level of oxidative break-down of the oil, and a critical reduction in performance; If the TAN number measured changes by more than 5% over the new oil, then an oil change would be recommended.

7. Mounting position and oil fill quantity

All NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. ***For additional information, please see the seperate mounting position diagrams and the corresponding oil fill quantity tables for the specified gear unit.***

The gearbox nametag will indicate the mounting position that was provided. ***For mounting orientations other than shown in the mounting position charts, please consult NORD Gear.***

STOP *HARMFUL SITUATION* **STOP**

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil-level plug and drain or add additional oil as needed. The minimum acceptable oil level is 0.15 in (4mm) below the oil level hole.

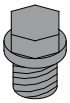
8. Oil plug locations

All gear units are assembled with the oil fill-level, oil-drain and vent plugs installed in their proper locations, according to the specified mounting position. All standard plugs are metric and utilize sealing gaskets between the head of the plug and the reducer housing.

9. Drain and fill-level plugs

All reducer drain plugs are metric socket head cap screws. For easier identification, it is NORD's standard practice to provide a hex-head screw for the fill-level plug. For ease of draining the used oil from the gear reducer, use the socket head screw located at the lowest part of the gearbox.

Drain Plug



Fill Level Plug

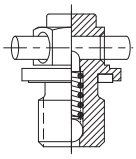
10. Vent plug locations

Reducer venting allows for air pressure differences that occur during operation, between the inner space of the reducer and the atmosphere, while ensuring leak-free operation. The AUTOVENT™ is standard for all vented gear units, unless otherwise noted.

AUTOVENT™ - The AUTOVENT™ helps prevent bearing and gear damage by behaving like a check valve to block the entry of foreign material (water, dust, corrosives, etc.). The breather opens at approximately 2-3 psi during operation and closes tightly as the gearbox cools. This option is perfect for humid conditions and wash-down environments, helping to maintain proper oil cleanliness, and reducing foaming and oxidation. NORD may choose to offer one of two style options as shown in Figure 1. The Type 2 AUTOVENT™ comes closed upon delivery with a transportation sealing plug (see Warning).

Figure 1 AUTOVENT™ Types

Type 1

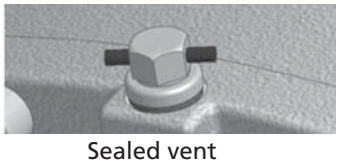


Type 2 with transportation plug

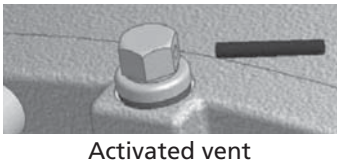
Open Vent - An optional open vent can be supplied by NORD. The open vent comes closed upon delivery with a transportation sealing plug (see Warning).

⚠ *WARNING* ⚠

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start up.



Sealed vent



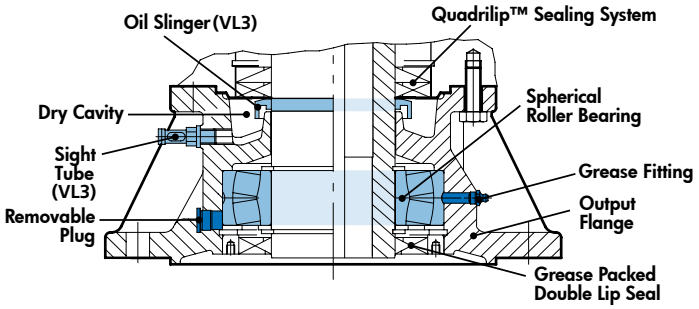
Activated vent

Filtered Vent - NORD may offer an optional filtered vent, which allows gases to permeate, but does not allow dust and debris to pass through the vent.

VL2 & VL3
EXTENDED BEARING LUBRICATION

1. VL2 – Spread Bearing Design

NORD offers reinforced output shaft bearings with increased bearing distance. The lower bearing is a oversized, double row spherical bearing, which absorbs high overhung and thrust loads while providing a longer bearing service life. The spherical roller bearing is especially useful in compensating for alignment errors in long agitator shafts. The VL2 spread bearing design is commonly used for shredders, mixers, overhead conveyors or applications requiring increased bearing load carrying capacities. Included with the VL2 design is a grease fitting for the lower bearing and a removable plug to allow excess grease to purge from the bearing cavity.



2. VL3 – Spread Bearing Design with Oil Safe Dry Cavity

The VL3 dry cavity design adds additional oil leak protective measures to the VL2 spread bearing design. NORD's Quadralip™ sealing system prevents oil from leaking from the gearbox into the VL2 flange. If in any case oil does leak past the Quadralip™ seals, it would flow down to the oil slinger mounted onto the shaft. As the shaft rotates, the oil will sling off into the dry cavity. A sight tube is provided for dry cavity inspection. At the bottom of the spread bearing flange is greased packed, double lip seal.

3. Service Guidelines for the Extended Bearing Flange

The spherical roller bearing on the extended bearing housing should be re-greased with 0.75 to 1.0 ounces (20-25 grams) of grease after every 2,500 hours of service or at least every 6 months. Prior to re-greasing the screw plug located opposite to the grease nipple should be unscrewed. After re-greasing the screw plug must be reinstalled and tightened. The extended bearing is factory assembled with the proper amount and type of grease. The type of grease supplied depends upon the type of oil specified at time of order.

Bearing Grease Options

Reducer Oil Type	Grease Type	Thickener Type	NLGI Grade	Ambient Temperature Range	Manufacture Brand / Type
Mineral	Standard	Li-Complex	NLGI 2	-30 to 60 °C (-22 to 140 °F)	Mobil Grease XHP222
Synthetic	High-Temperature	Polyurea	NLGI 2	-25 to 80 °C (-13 to 176 °F)	Mobil / Polyrex EP 2
Food-Grade	Food-Grade	Al-Complex	NLGI 2	-25 to 40 °C (-13 to 104 °F)	Mobil / FM222

HARMFUL SITUATION

Grease compatibility depends upon the type of thickener or soap complex used, the base oil type suspended within the thickener, and the type of additives used. The user should check with the lubrication supplier before making substitutions in brand and type in order to assure compatibility and to avoid causing possible damage to the extended bearing.

HELICAL-WORM REDUCER LUBRICATION

1. Importance of proper lubrication

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective "fluid boundary" between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

NORD helical-worm reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position.

2. Standard oil type

NORD helical worm gear reducers are filled with ISO VG 680 synthetic-hydrocarbon/polyalphaolefin (SHC/PAO) worm gear oil.

- SHC/PAO worm gear oils have good high and low temperature stability, are compatible with most paint and seal types, and are miscible with mineral oils.
- SHC/PAO worm gear oils also contain a small amount of organic ester and other antiwear (AW) packages to offer improved lubrication conditions, especially in the worm mesh, where a sideways sliding motion prevails.

Please see user manual U11020 for more specific information and for optional helical worm lubricants.

HARMFUL SITUATION

In worm gears avoid using extreme pressure (EP) gear oils containing sulfur-phosphorous chemistries; these additives can react adversely with bronze worm gears, and accelerate wear.

IMPORTANT NOTE

Consult the sticker adjacent to the fill plug to determine the type of lubricant installed at the factory. Some units have special lubricants designed to operate in certain environments or intended to extend the service life or service temperature range of the lubricant. If in doubt about which lubricant is needed for a certain application, please contact NORD Gear.

3. Lubrication replacement

The helical-worm gear oil should be replaced at least after every 20,000 operating hours or after every four years. Often gear reducers are exposed to extreme ambient conditions, hostile environments, wet conditions, or dirty and dusty operating areas. Especially in these situations, it is important to establish a condition-based oil service interval.

4. Efficiency

Helical worm gears reach efficiencies up to 92% and are generally much more efficient than worm-only gear units. However, it is important to consider the following, when using worm gears.

- Worm gears reach their peak rated efficiency, after they undergo a natural run-in process (up to 25 hours operating time at maximum rated load). Catalog published power and torque figures are based upon the rated efficiency after the run-in is complete.
- Worm gears have naturally lower startup efficiencies compared to operating efficiencies. As input speed increases the enhanced hydrodynamic effects of the oil result in less tooth friction and increased worm gear efficiency.

IMPORTANT NOTE

Worm gear reducers applied in cold temperature service, may require increased motor power for the following reasons:

- Lower operating temperatures, cause lubrication viscosity to increase in both the gearbox and in the moving areas of the driven machine.
- Worm-gears have naturally lower start-up efficiencies compared to operating efficiencies.
- In extreme cases, one might need to consider increasing the motor power and lowering the oil viscosity

5. Oil Viscosity

Viscosity, or the oil's resistance to shear under load, is often considered the single most important property of any gear oil.

- Often one will consider making a viscosity correction to the oil to improve the performance when operating the gear unit at low temperature or high temperature.
- In cases of extreme load conditions, gear pairs and antifriction bearings may be more susceptible to sliding or scuffing wear. In these operating conditions, it may also be beneficial to consider an increased lubrication viscosity and/or a lubrication with improved antiwear additive packages.

IMPORTANT NOTE

The user should consult with their primary lubrication supplier before considering changes in oil type or viscosity.

6. Maximum oil sump temperature limit

To prevent reducer overheating, the reducer's maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Synthetic	105°C (220°F)	107°C (225°F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

7. The importance of routine oil analysis

Routine oil analysis, sound lubrication practices, and good tracking of oil performance trends will help establish proper lubrication maintenance and change-out intervals. To maximize equipment reliability, NORD Gear generally recommends a condition-based lubrication maintenance program. One may take exceptions to this general recommendation on sealed-for-life or maintenance-free gear units or smaller and less costly gear units. In these instances, the replacement cost of the gear unit is often small compared to the costs associated with this type of oil analysis program.

STOP *HARMFUL SITUATION* **STOP**

NORD suggests replacing the gear oil if oil analysis indicates any of the following:

- Viscosity has changed by approximately 10% or more.
- Debris particles (silicon, dust, dirt or sand) exceed 25 ppm.
- Iron content exceeds 150-200 ppm.
- Water content is greater than 0.05% (500 ppm).
- The total acid number (TAN) tests indicate a significant level of oxidative break-down of the oil, and a critical reduction in performance; If the TAN number measured changes by more than 5% over the new oil, then an oil change would be recommended.

8. Mounting position and oil fill quantity

All NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. ***For additional information, please see the seperate mounting position diagrams and the corresponding oil fill quantity tables for the specified gear unit.***

The gearbox nametag will indicate the mounting position that was provided. ***For mounting orientations other than shown in the mounting position charts, please consult NORD Gear.***

STOP *HARMFUL SITUATION* **STOP**

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil-level plug and drain or add additional oil as needed. The minimum acceptable oil level is 0.15 in (4mm) below the oil level hole.

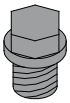
9. Oil plug locations

All gear units are assembled with the oil fill-level, oil-drain and vent plugs installed in their proper locations, according to the specified mounting position. All standard plugs are metric and utilize sealing gaskets between the head of the plug and the reducer housing.

10. Drain and fill-level plugs

All reducer drain plugs are metric socket head cap screws. For easier identification, it is NORD's standard practice to provide a hex-head screw for the fill-level plug. For ease of draining the used oil from the gear reducer, use the socket head screw located at the lowest part of the gearbox.

Drain Plug



Fill Level Plug

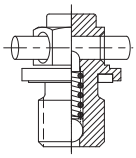
11. Vent plug locations

Reducer venting allows for air pressure differences that occur during operation, between the inner space of the reducer and the atmosphere, while ensuring leak-free operation. The AUTOVENT™ is standard for all vented gear units, unless otherwise noted.

AUTOVENT™ - The AUTOVENT™ helps prevent bearing and gear damage by behaving like a check valve to block the entry of foreign material (water, dust, corrosives, etc.). The breather opens at approximately 2-3 psi during operation and closes tightly as the gearbox cools. This option is perfect for humid conditions and wash-down environments, helping to maintain proper oil cleanliness, and reducing foaming and oxidation. NORD may choose to offer one of two style options as shown in Figure 1. The Type 2 AUTOVENT™ comes closed upon delivery with a transportation sealing plug (see Warning).

Figure 1 AUTOVENT™ Types

Type 1



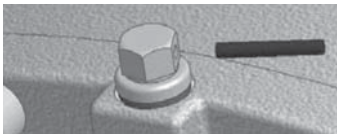
Type 2 with transportation plug

Open Vent - An optional open vent can be supplied by NORD. The open vent comes closed upon delivery with a transportation sealing plug (see Warning).

⚠ *WARNING* ⚠

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start up.

Sealed vent



Activated vent

Filtered Vent - NORD may offer an optional filtered vent, which allows gases to permeate, but does not allow dust and debris to pass through the vent.

MINICASE® (SM SERIES) WORM GEAR LUBRICATION GUIDELINES

1. Importance of proper gearbox lubrication

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective "fluid boundary" between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

2. Maintenance free design

MINICASE® (SM series) worm gear reducers are designed to be maintenance-free and are supplied completely sealed. They are factory oil-filled with a pre-determined oil fill amount in accordance to the specified reducer size and mounting position. The synthetic lubrication used is suitable for the life of the product so the MINICASE™ is inherently maintenance free.

3. Standard oil type

The standard factory oil fill for MINICASE® (SM) worm gear reducers is ISO viscosity VG synthetic hydrocarbon/polyalphaolefin (SHC/PAO oil) food grade oil suitable for NSF-H1 incidental contact and is a factory stocked lubricant. Food grade oil suitable for NSF-H1 incidental contact is a factory stocked option.

See user manual U11040 for specific information and for optional MINICASE® (SM) worm lubrication types and options.

HARMFUL SITUATION

In worm gears avoid using extreme pressure (EP) gear oils containing sulfur-phosphorous chemistries; these additives can react adversely with bronze worm gears, and accelerate wear.

4. Efficiency

It is important to consider the following, when using worm gears.

- Worm gears reach their peak rated efficiency, after they undergo a natural run-in process (up to 25 hours operating time at maximum rated load). Catalog published power and torque figures are based upon the rated efficiency after the run-in is complete.
- Worm gears have naturally lower startup efficiencies compared to operating efficiencies. As input speed increases the enhanced hydrodynamic effects of the oil result in less tooth friction and increased worm gear efficiency.

IMPORTANT NOTE

Worm gear reducers applied in cold temperature service, may require increased motor power for the following reasons:

- Lower operating temperatures, cause lubrication viscosity to increase in both the gearbox and in the moving areas of the driven machine.
- Worm-gears have naturally lower start-up efficiencies compared to operating efficiencies.
- In extreme cases, one might need to consider increasing the motor power and/or lowering the oil viscosity.

5. Maximum oil sump temperature limit

To prevent reducer overheating, the reducer's maximum oil sump temperature limit must not be exceeded for prolonged periods of operation (up to 3 hours continuous operation depending upon reducer size).

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Synthetic	105°C (220°F)	107°C (225°F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

6. Oil Viscosity

The viscosity rating determines the operating oil's resistance to shear under load conditions. Some important viscosity considerations include the following:

- Lightly loaded gears require lower viscosity oils than highly loaded gears.
- Lower viscosity will provide thin oil film, lower friction, higher mechanical efficiency, and better heat removal conditions.
- Higher viscosity will provide thicker oil film, and better resistance to sliding wear, scuffing wear, and galling at high pressure.
- Higher operating temperatures will cause a reduction in viscosity and lower operating temperatures, cause an increase in viscosity or a thickening of the oil.

The standard oil-fill is considered acceptable for most applications. In certain situations an oil viscosity change may be beneficial.

- If the gear unit is exposed to frequent high load conditions. A higher viscosity oil will have a higher film thickness offering better overall resistance to oil shear, sliding wear and scuffing wear in gears and roller element bearings.
- An oil viscosity correction or lubrication change may improve the overall performance when operating the gear unit at very low or high ambient temperature conditions.

IMPORTANT NOTE

The user should consult with their primary lubrication supplier before considering changes in oil type or viscosity.

7. Viscosity Index

Viscosity index helps quantify the rate of oil viscosity change with respect to temperature changes. Oils with a reasonably high viscosity index tend to be more stable in a changing temperature environment. The ability of an oil to maintain a small viscosity differential over the operating range of the gearbox provides a more consistent lubricating film and better wear performance.

Synthetic oils typically have a higher viscosity index than mineral oils and polyglycol oils tend to have an exceptionally high viscosity index compared to other synthetic oils like polyalphaolefin or ester based products.

MINICASE® (SMI/SMID) WORM GEAR LUBRICATION GUIDELINES

1. Importance of proper gearbox lubrication

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective "fluid boundary" between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

2. Factory Oil-Filled / Maintence-Free

NORD modular worm gear units are inherently maintence-free, factory oil filled, and supplied with a high-quality, long-life, synthetic oil which is intend to be suitable for the life of the gear unit.

MINICASE® (SMI/SMID) worm gear units are assembled at the factory from stocked component parts. They are filled at time of assembly in accordance to the specified reducer mounting position. See user manuals U13150 and U13250 for more info.

3. Standard Oil Types

MINICASE® (SMI/SMID) worm gear units are factory filled with synthetic poly glycol oil. Food-grade polyglycol oil is optional. The specific oil type and viscosity grade are displayed on the reducer nameplate. See user manual 11050 for specific MINICASE® (SMI/SMID) worm lubrication types and options.

HARMFUL SITUATION

In worm gears avoid using extreme pressure (EP) gear oils containing sulfur-phosphorous chemistries; these additives can react adversely with bronze worm gears, and accelerate wear.

4. Efficiency

It is important to consider the following, when ordering worm gears.

- Worm gears reach their peak rated efficiency, after they undergo a natural run-in process (up to 25 hours operating time at maximum rated load). Catalog published power and torque figures are based upon the rated efficiency after the run-in is complete.
- Worm gears have naturally lower startup efficiencies compared to operating efficiencies. As input speed increases the enhanced hydrodynamic effects of the oil result in less tooth friction and increased worm gear efficiency.

IMPORTANT NOTE

Worm gear reducers applied in cold temperature service, may require increased motor power for the following reasons:

- Lower operating temperatures, cause lubrication viscosity to increase in both the gearbox and in the moving areas of the driven machine.
- Worm-gears have naturally lower start-up efficiencies compared to operating efficiencies.
- In extreme cases, one might need to consider increasing the motor power and lowering the oil viscosity

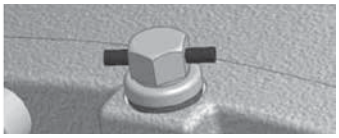
5. Optional Vent Kits

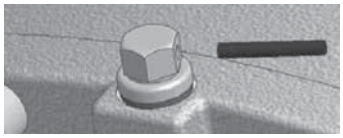
MINICASE® (SMI/SMID) worm gear units are designed to operate sealed or vented. As a standard the modular worm gear units are factory oil filled and supplied with oil plugs in the housing, making vent plugs optional. See user manual U14750.

NORD can supply an AUTOVENT™ or an open vent with each gear unit size. If a vent is desired the type must be specified at the time of order. Reducer vents are sealed with a transportation plug that must be removed prior to gear unit start-up.

Type	Transportation Seal	Installation	Part Number
AUTOVENT™	Included	Factory or Field site	66093510
Open Vent	None	Field Only	60693500
Open Vent	Included	Factory or Field site	22008004 (vent) 25308120 (gasket)

Unless noted by a seperate part number, vent kits include the housing gasket





WARNING

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start-up.

6. AUTOVENT™

The AUTOVENT™ helps prevent bearing and gear damage by behaving like a check valve to block the entry of foreign material (water, dust, corrosives, etc.). The breather opens at approximately 2-3 psi during operation and closes tightly as the gearbox cools. This option is perfect for humid conditions and wash-down environments, helping to maintain proper oil cleanliness, while reducing foaming and oxidation.

7. Open Vent

A typical gearbox industry open vent option can also be supplied by NORD. This option allows free exchange of air and does not build-up any back pressure inside the gear unit. This option is ideal for many operating conditions where the geared product is used in relatively clean and moisture-free environment.

8. When to Use a Sealed or a Vented Unit

There are many conditions that should be considered when deciding whether to use a sealed or vented unit.

1. If the duty cycle is intermittent, the run times are short, and any build-up of internal pressure or temperature is relatively low, the sealed unit option may be used.
2. If running continuous and under moderate to high load conditions, worm gears can generate higher operating temperatures and a build-up of internal pressure. In these instances a vent is strongly recommended. Consult NORD if operation at high load conditions is required.
3. If running continuous at 4-pole electric motor speeds (1800 rpm at 60 Hz) or higher, then a vent option is usually recommended. Consult NORD if operation at higher speeds is required.
4. Radial shaft seals produce a hydrodynamic pumping action to help push lubricant back into the gear unit, causing a small amount of ingested air and a small pressure increase (1-2 psi) that does not normally require a reducer vent; however when combined with continuous operation under high load (Condition 2), additional operating pressures will result and a vent should be used.
5. When the environment is contaminated with water, dirt, or other objects that may be ingested into the breather, increased wear of bearings, gearing, and lubrication breakdown can result. In these instances the sealed option or an AUTOVENT™ should be considered.

9. Maximum Oil Sump Temperature Limit

To prevent reducer overheating, the reducer's maximum oil-sump temperature limit must not be exceeded for prolonged periods of operation.

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Synthetic	105°C (220°F)	107°C (225°F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the safe operating temperature limit, please consult NORD to discuss alternatives.

10. Oil Viscosity

The viscosity rating determines the operating oil's resistance to shear under load conditions. Some important viscosity considerations include the following:

- Lightly loaded gears require lower viscosity oils than highly loaded gears.
- Lower viscosity will provide thin oil film, lower friction, higher mechanical efficiency, and better heat removal conditions.
- Higher viscosity will provide thicker oil film, and a better resistance to sliding wear, scuffing wear, and galling at high pressure.
- Higher operating temperatures will cause a reduc-tion in viscosity and lower operating temperatures, cause an increase in viscosity or a thickening of the oil.

The standard oil-fill is considered acceptable for most applications. In certain situations an oil viscosity change may be beneficial.

- If the gear unit is exposed to frequent high load conditions. A higher viscosity oil will have a higher film thickness offering better overall resistance to oil shear, sliding wear and scuffing wear in gears and roller element bearings.
- An oil viscosity correction or lubrication change may improve the overall performance when operating the gear unit at very low or high ambient temperature conditions.

IMPORTANT NOTE

The user should consult with their primary lubrication supplier before considering changes in oil type or viscosity.

11. Viscosity Index

Viscosity index helps quantify the rate of oil viscosity change with respect to temperature changes. Oils with a reasonably high viscosity index tend to be more stable in a changing temperature environment. The ability of an oil to maintain a small viscosity differential over the operating range of the gearbox provides a more consistent lubricating film and better wear performance.

Synthetic oils typically have a higher viscosity index than mineral oils and polyglycol oils tend to have an exceptionally high viscosity index compared to other synthetic oils like polyalphaolefin or ester based products.

FLEXBLOC™ (SI/SID SERIES) WORM GEAR LUBRICATION GUIDELINES

1. Importance of Proper Lubrication

Proper gearbox lubrication is essential in order to reduce friction, heat, and component wear. Lubricants reduce heat and wear by inserting a protective "fluid boundary" between mating parts and preventing direct metal to metal contact. Lubricants also help prevent corrosion and oxidation, minimize foam, improve heat transfer, optimize reducer efficiency, absorb shock loads and reduce noise.

2. Factory Oil-Filled / Maintence-Free

NORD modular worm gear units are inherently maintence-free, factory oil filled, and supplied with a high-quality, long-life, synthetic oil which is intend to be suitable for the life of the gear unit.

FLEXBLOC™ SI worm gear units are filled at time of assembly to a universal oil fill, allowing for many mounting position possibilities. See user manual U13300.

3. Standard oil type

FLEXBLOC™ (SI/SID) worm gear units are factory filled with synthetic poly glycol oil. Food-grade polyglycol oil is optional. The specific oil type and viscosity grade are displayed on the reducer nameplate. See user manual 11060 for specific FLEXBLOC™ (SI/SID) worm lubrication types and options.

HARMFUL SITUATION

In worm gears avoid using extreme pressure (EP) gear oils containing sulfur-phosphorous chemistries; these additives can react adversely with bronze worm gears, and accelerate wear.

4. Efficiency

It is important to consider the following, when ordering worm gears.

- Worm gears reach their peak rated efficiency, after they undergo a natural run-in process (up to 25 hours operating time at maximum rated load). Catalog published power and torque figures are based upon the rated efficiency after the run-in is complete.
- Worm gears have naturally lower startup efficiencies compared to operating efficiencies. As input speed increases the enhanced hydrodynamic effects of the oil result in less tooth friction and increased worm gear efficiency.

IMPORTANT NOTE

Worm gear reducers applied in cold temperature service, may require increased motor power for the following reasons:

- Lower operating temperatures, cause lubrication viscosity to increase in both the gearbox and in the moving areas of the driven machine.
- Worm-gears have naturally lower start-up efficiencies compared to operating efficiencies.
- In extreme cases, one might need to consider increasing the motor power and lowering the oil viscosity

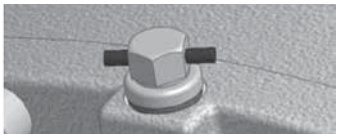
5. Optional Vent Kits

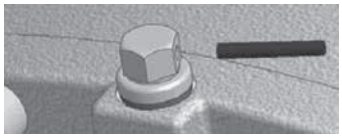
FLEXBLOC™ (SI) worm gear units are designed to operate sealed or vented. As a standard the modular worm gear units are factory oil filled and supplied with oil plugs in the housing, making vent plugs optional. See user manual U14800 for vent locations.

NORD can supply an AUTOVENT™ or an open vent with each gear unit size. If a vent is desired the type must be specified at the time of order. Reducer vents are sealed with a transportation plug that must be removed prior to gear unit start-up.

Type	Transportation Seal	Installation	Part Number
AUTOVENT™	Included	Factory or Field site	66093510
Open Vent	None	Field Only	60693500
Open Vent	Included	Factory or Field site	22008004 (vent) 25308120 (gasket)

Unless noted by a seperate part number, vent kits include the housing gasket





WARNING

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start-up.

6. AUTOVENT™

The AUTOVENT™ helps prevent bearing and gear damage by behaving like a check valve to block the entry of foreign material (water, dust, corrosives, etc.). The breather opens at approximately 2-3 psi during operation and closes tightly as the gearbox cools. This option is perfect for humid conditions and wash-down environments, helping to maintain proper oil cleanliness, while reducing foaming and oxidation.

7. Open Vent

A typical gearbox industry open vent option can also be supplied by NORD. This option allows free exchange of air and does not build-up any back pressure inside the gear unit. This option is ideal for many operating conditions where the geared product is used in relatively clean and moisture-free environment.

8. When to Use a Sealed or a Vented Unit

There are many conditions that should be considered when deciding whether to use a sealed or vented unit.

1. If the duty cycle is intermittent, the run times are short, and any build-up of internal pressure or temperature is relatively low, the sealed unit option may be used.
2. If running continuous and under moderate to high load conditions, worm gears can generate higher operating temperatures and a build-up of internal pressure. In these instances a vent is strongly recommended. Consult NORD if operation at high load conditions is required.
3. If running continuous at 4-pole electric motor speeds (1800 rpm at 60 Hz) or higher, then a vent option is usually recommended. Consult NORD if operation at higher speeds is required.
4. Radial shaft seals produce a hydrodynamic pumping action to help push lubricant back into the gear unit, causing a small amount of ingested air and a small pressure increase (1-2 psi) that does not normally require a reducer vent; however when combined with continuous operation under high load (Condition 2), additional operating pressures will result and a vent should be used.
5. When the environment is contaminated with water, dirt, or other objects that may be ingested into the breather, increased wear of bearings, gearing, and lubrication breakdown can result. In these instances the sealed option or an AUTOVENT™ should be considered.

9. Maximum Oil Sump Temperature Limit

To prevent reducer overheating, the reducer's maximum oil-sump temperature limit must not be exceeded for prolonged periods of operation.

Oil Type	Maximum Oil Temperature Limit	
	NORD	AGMA 9005-D94
Synthetic	105°C (220°F)	107°C (225°F)

IMPORTANT NOTE

Use caution when specifying gear reducers for high temperature service. If there is concern about exceeding the allowable safe operating temperatures, please consult NORD to discuss alternatives.

10. Oil Viscosity

The viscosity rating determines the operating oil's resistance to shear under load conditions. Some important viscosity considerations include the following:

- Lightly loaded gears require lower viscosity oils than highly loaded gears.
- Lower viscosity will provide thin oil film, lower friction, higher mechanical efficiency, and better heat removal conditions.
- Higher viscosity will provide thicker oil film, and better resistance to sliding wear, scuffing wear, and galling at high pressure.
- Higher operating temperatures will cause a reduction in viscosity and lower operating temperatures, cause an increase in viscosity or a thickening of the oil.

The standard oil-fill is considered acceptable for most applications. In certain situations an oil viscosity change may be beneficial.

- If the gear unit is exposed to frequent high load conditions. A higher viscosity oil will have a higher film thickness offering better overall resistance to oil shear, sliding wear and scuffing wear in gears and roller element bearings.
- An oil viscosity correction or lubrication change may improve the overall performance when operating the gear unit at very low or high ambient temperature conditions.

IMPORTANT NOTE

The user should consult with their primary lubrication supplier before considering changes in oil type or viscosity.

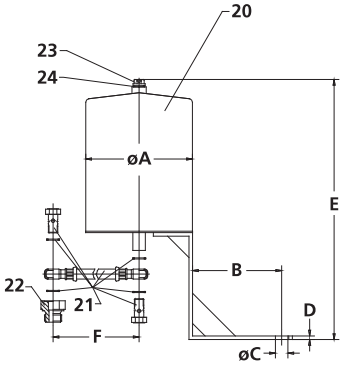
11. Viscosity Index

Viscosity index helps quantify the rate of oil viscosity change with respect to temperature changes. Oils with a reasonably high viscosity index tend to be more stable in a changing temperature environment. The ability of an oil to maintain a small viscosity differential over the operating range of the gearbox provides a more consistent lubricating film and better wear performance.

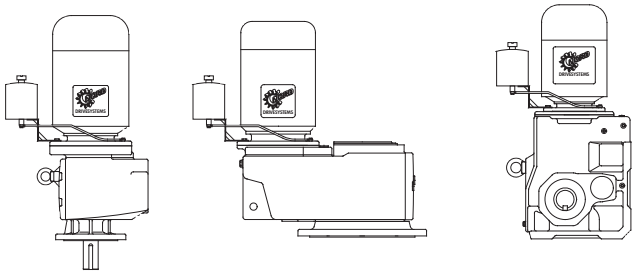
Synthetic oils typically have a higher viscosity index than mineral oils and polyglycol oils tend to have an exceptionally high viscosity index compared to other synthetic oils like polyalphaolefin or ester based products.

Installation Instructions

Sometimes NORD requires the use of an oil expansion chamber when the motor or reducer input is mounted vertically. Consult your NORD catalog for additional information and application considerations.



1. Secure the gear reducer in the proper mounting position for the application and remove the vent plug from the gear reducer. The hose assembly kit (21) will be fitted to the reducer using the housing port provided.
2. When using the larger 2.7 and 5.4 liter chambers, screw the adapter fitting (22) into the reducer housing port. Use all sealing gaskets provided.
3. Mount the overflow tank (20) at the highest location from the reducer, as permitted by the hose assembly kit (21). Typical mounting configurations are represented below. Use one of the input cover's mounting bolts, to mount the chamber support leg to the reducer.



4. Be sure to use the proper fittings. Assemble one end of the vent-hose assembly (21) to bottom of the chamber and one-end to the reducer.
5. Secure the vent-plug (23) and gasket (24) that is supplied with the kit to the top of the expansion chamber.

STOP *HARMFUL SITUATION* STOP

Remove the protective "rubber element" from the supplied vent prior to use so that an open-vent is formed on top of the overflow tank. Avoid using a pressurized AUTOVENT™ breather on the overflow tank since this may create an undesired pressure-vacuum in the overflow tank.

Expansion Chamber Kit Dimensions & Parts List

Kit Part Number: 28390410 - 5.4 Liter Oil Expansion Chamber

Kit P/N	Ø A	B	Ø C	D	E	F	Units
28390410 (5.4 Liter)	7.09	3.54	0.69	0.20	15.18	31.50	inch
	180	90	17.5	5	385.5	800	mm

Item	Part Number	Description
20	28300410	Overflow Tank - 5.4 Liter
21	28310040	Flexible Vent Hose Assy - Includes: Hose, metal gaskets & 2 Hollow Bolts (2 Pcs. - G1/4)
22	22030030	Adapter Fitting (M30 X 1.5 to G1/4)
23	22012004	Normal Style Vent Plug (M12 X 1.5, DIN 910)
24	25312150	Vent Plug Gasket (12 X 15.5 X 1.5)

Please see page 2 for gearbox compatability

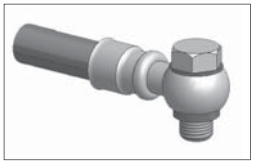
* Need to additionally order part #28390380 which is sub-assembly shown below.

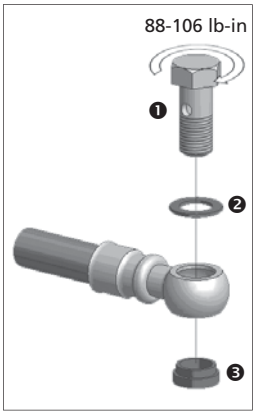
Sub-Assembly P/N 28390380 for NORDBLOC®.1 gear units with M10x1 air vent.

❶	❷	❸	❹
1x DIN 7643 M10x1 283 00380	1x DIN 7603A Cu 10x16x1 253 10166	1x Ring 10x14x5 283 00370	1xDIN 9021 ø8,4 227 10840

Assembly of the expansion unit at the gear unit. Types SK 572.1/573.1, SK 672.1/673.1

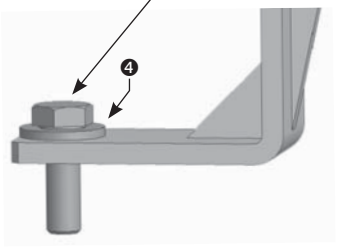


Vent Hose Sub-Assembly

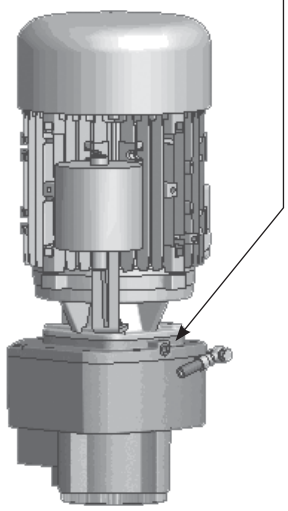


❹ For motor sizes 63, 71, 80, 90, 100 & 112

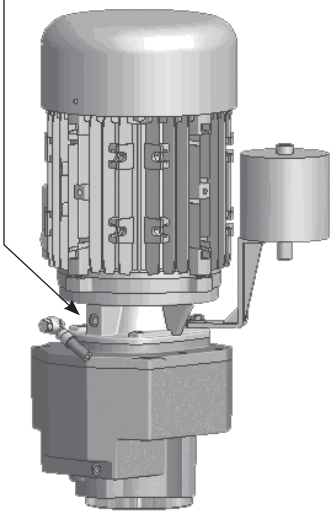
• Motor attachment bolt



Motor Sizes 63, 71 & 80:
Assembly vent-hose to port as shown.



Motor Sizes 90,100 & 112:
Assembly vent-hose to port as shown.



HELICAL & BEVEL REDUCER LUBRICATION TYPES

Lubrication Tables – Helical and Bevel Gear Units

Standard Oil Lubricants

ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
VG220	MIN-EP	0 to 40°C (32 to 104°)	Mobilgear 600XP220	♦❶
	PAO	-35 to 60°C (-31 to 140°F)	Mobil SHC630	♦❷
	FG	-5 to 40°C (23 to 104°F)	Fuchs FM220	♦

Optional Oil Lubricants

ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
VG460	PAO	-35 to 80°C (-31 to 176°F)	Mobil SHC 634	-
	FG-PAO	-35 to 80°C (-31 to 176°F)	Mobil SHC Cibus 460	-
VG220	FG-PAO	-35 to 60°C (-31 to 140°F)	Mobil SHC Cibus 220	-
VG150	PAO	-35 to 25°C (-31 to 77°F)	Mobil SHC629	-

Grease Options (applied to greased bearings and seal cavities)

NLGI Grade	Grease Type/Thickener	Ambient Temperature Range	Manufacturer Brand/Type	Notes
NLGI 2	Standard (Li-Complex)	-30 to 60°C (-22 to 140°F)	Mobil Grease XHP222	♦❶
	High Temp (Polyurea)	-40 to 80°C (-40 to 176°F)	Mobil / Polyrex EP 2	♦❷
	Food-Grade (Polyurea)	-30 to 40°C (-22 to 104°F)	Mobil SHC Polyrex 222	♦

♦ Stocked Lubricants

❶ Standard product on serviceable gear units

❷ Standard product on maintenance free gear units

IMPORTANT NOTES

- The "Ambient Temperature" is intended to be an operation guideline based upon the typical properties of all the lubricant. The viscosity and other properties of the lubricant change based upon load, speed, ambient conditions, and reducer operating temperatures. The user should consult with their lubrication supplier & NORD gear before considering changes in oil type or viscosity.
- To prevent reducer overheating, observe the maximum operating oil temperature limits:
  Mineral Oil: 80-85 °C (176 – 180 °F).
  Synthetic Oil: 105 °C (225 °F).
- In the following instances, please consult NORD for specific recommendations:
  - √ Gear units will operate in high ambient temperature conditions exceeding 40 °C (104 °F).
  - √ Gear units will operate in cold ambient temperature conditions approaching 0 °C (32 °F) or lower.
  - √ Lower than an ISO VG100 viscosity oil is being considered for a cold-temperature service.
  - √ Fluid grease is required for lubricating the gear unit.
- Observe the general lubrication guidelines outlined in user manual U10750.

Oil Formulation Codes

MIN-EP - Mineral Oil with EP Additive
PAO-EP - Synthetic Polyalphaolefin Oil with EP Additive
PAO - Synthetic Polyalphaolefin Oil
PG - Synthetic Polyglycol Oil
FG - Food-Grade Oil
FG-PAO - Food-Grade, Synthetic Poyalphaolefin Oil
FG-PG - Food-Grade, Synthetic Polyglycol Oil

Lubrication Notes

- Avoid using (EP) gear oils in worm gears that contain sulfur-phosphorous chemistries, as these additives can react adversely with bronze worm gears and accelerate wear.
- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturer for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility and to obtain recommended cleaning or flushing procedures.
- Do not to mix different oils with different additive packages or different base oil formulation types. Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral oil or polyalphaolefin (PAO) synthetic oil.

IMPORTANT NOTES

- The "Ambient Temperature" is intended to be an operation guideline based upon the typical properties of all the lubricant. The viscosity and other properties of the lubricant change based upon load, speed, ambient conditions, and reducer operating temperatures. The user should consult with their lubrication supplier & NORD Gear before considering changes in oil type or viscosity.
- To prevent reducer overheating, observe the maximum operating oil temperature limits:

  Synthetic Oil: 105 °C (225 °F).
- In the following instances, please consult NORD for specific recommendations:

√ Gear units will operate in high ambient temperature conditions exceeding 40 °C (104 °F).
√ Gear units will operate in cold ambient temperature conditions approaching 0 °C (32 °F) or lower.
√ Lower than an ISO VG100 viscosity oil is being considered for a cold-temperature service.
√ Fluid grease is required for lubricating the gear unit.

- Observe the general lubrication guidelines outlined in user manual U10770.

Oil Formulation Codes

PAO - Synthetic Polyalphaolefin Oil
PG - Synthetic Polyglycol Oil
FG-PAO - Food-Grade, Synthetic Poyalphaolefin Oil
FG-PG - Food-Grade, Synthetic Polyglycol Oil

Lubrication Notes

- Avoid using (EP) gear oils in worm gears that contain sulfur-phosphorous chemistries, as these additives can react adversely with bronze worm gears and accelerate wear.
- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturer for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility and to obtain recommended cleaning or flushing procedures.
- Do not to mix different oils with different additive packages or different base oil formulation types. Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral oil or polyalphaolefin (PAO) synthetic oil.

♦ **Stocked Lubricants**

IMPORTANT NOTES

- Observe the general lubrication guidelines in User Manual U17900.
- Ambient temperature range is a guideline only. The allowed operating temperature range for the gear unit is dependent upon assembly components used, their individual temperature limits, and the actual operating conditions.
- The selected oil type and viscosity is considered appropriate for most applications utilizing the specified NORD gear unit type. Different oil types or viscosity grades may be recommended if the gear unit is exposed to frequent high load conditions or operating under extreme low or high ambient temperature conditions.
- To prevent reducer overheating, observe the maximum operating oil temperature limits:
  Synthetic oil: 105 °C (225 °F).
- Consult NORD for recommendations in the following instances:
  √ The gear unit is exposed to frequent high load conditions.
  √ Ambient temperature conditions exceed 40 °C (104 °F) or approach 0 °C (32 °F) or lower.
  √ Fluid grease is being considered or specified for lubricating the gear unit.
  √ Lower than an ISO VG100 viscosity oil is being considered for a cold-temperature service.

Oil Formulation Codes

PAO - Synthetic Polyalphaolefin Oil
PG - Synthetic Polyglycol Oil
FG-PAO - Food-Grade, Synthetic Poyalphaolefin Oil
FG-PG - Food-Grade, Synthetic Polyglycol Oil

WARNING

- Avoid using (EP) gear oils in worm gears that contain sulfur-phosphorous chemistries, as these additives can react adversely with bronze worm gears and accelerate wear.
- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturer for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility and to obtain recommended cleaning or flushing procedures.
- Do not to mix different oils with different additive packages or different base oil formulation types. Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral or polyaolpha-olefin (PAO) oils.

IMPORTANT NOTES

- Observe the general lubrication guidelines in User Manual U10800.
- Ambient temperature range is a guideline only. The allowed operating temperature range for the gear unit is dependent upon assembly components used, their individual temperature limits, and the actual operating conditions.
- The selected oil type and viscosity is considered appropriate for most applications utilizing the specified NORD gear unit type. Different oil types or viscosity grades may be recommended if the gear unit is exposed to frequent high load conditions or operating under extreme low or high ambient temperature conditions.
- To prevent reducer overheating, observe the maximum operating oil temperature limits:
  Synthetic oil: 105 °C (225 °F).
- Consult NORD for recommendations in the following instances:
  √ The gear unit is exposed to frequent high load conditions.
  √ Ambient temperature conditions exceed 40 °C (104 °F) or approach 0 °C (32 °F) or lower.
  √ Fluid grease is being considered or specified for lubricating the gear unit.
  √ Lower than an ISO VG100 viscosity oil is being considered for a cold-temperature service.

Oil Formulation Codes

PAO - Synthetic Polyalphaolefin Oil
PG - Synthetic Polyglycol Oil
FG-PAO - Food-Grade, Synthetic Poyalphaolefin Oil
FG-PG - Food-Grade, Synthetic Polyglycol Oil

WARNING

- Avoid using (EP) gear oils in worm gears that contain sulfur-phosphorous chemistries, as these additives can react adversely with bronze worm gears and accelerate wear.
- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturer for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility and to obtain recommended cleaning or flushing procedures.
- Do not to mix different oils with different additive packages or different base oil formulation types. Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral or polyaolphaolefin (PAO) oils.

FLEXBLOC™ (SI/SID SERIES) WORM GEAR LUBRICATION TYPES

Lubrication Tables – FLEXBLOC™ (SI/SID Series) Worm Gear Units

Standard Oil Lubricants

NORD uses a semi automated assembly process to produce the FLEXBLOC™ gear unit assemblies. During this process the gear units are factory filled in accordance with the following table.

Standard Oil Lubricants

ISO Viscosity	Oil Type	Ambient Temperature Range	Manufacturer Brand/Type	Notes
VG680	FG-PG	-25 to 80°C (-13 to 176°F)	Klübersynth UH1 6-680	Inch
	PG	-20 to 40°C (-4 to 104°F)	Klübersynth GH 6-680	Metric
VG220	FG-PG	-25 to 40°C (-13 to 104°F)	Klübersynth UH1 6-220	Inch
	PG	-25 to 40°C (-13 to 104°F)	Klübersynth GH 6-220	Metric

Grease Options (applied to greased bearings and seal cavities)

NLGI Grade	Grease Type/Thickener	Ambient Temperature Range	Manufacturer Brand/Type	Notes
NLGI 2	High Temp (Polyurea)	-25 to 80°C (-13 to 176°F)	Kluber / Petamo GHY133N	♦
	Food-Grade (Aluminum Complex)	-25 to 40°C (-13 to 104°F)	Kluber / Klubersynth UH1 14-151	♦

♦ **Stocked Lubricants**

IMPORTANT NOTES

- Observe the general lubrication guidelines in User Manual U10800.
- Ambient temperature range is a guideline only. The allowed operating temperature range for the gear unit is dependent upon assembly components used, their individual temperature limits, and the actual operating conditions.
- The selected oil type and viscosity is considered appropriate for most applications utilizing the specified NORD gear unit type. Different oil types or viscosity grades may be recommended if the gear unit is exposed to frequent high load conditions or operating under extreme low or high ambient temperature conditions.
- To prevent reducer overheating, observe the maximum operating oil temperature limits:
  Synthetic oil: 105 °C (225 °F).
- Consult NORD for recommendations in the following instances:
  √ The gear unit is exposed to frequent high load conditions.
  √ Ambient temperature conditions exceed 40 °C (104 °F) or approach 0 °C (32 °F) or lower.
  √ Fluid grease is being considered or specified for lubricating the gear unit.
  √ Lower than an ISO VG100 viscosity oil is being considered for a cold-temperature service.

Oil Formulation Codes

PAO - Synthetic Polyalphaolefin Oil
PG - Synthetic Polyglycol Oil
FG-PAO - Food-Grade, Synthetic Poyalphaolefin Oil
FG-PG - Food-Grade, Synthetic Polyglycol Oil

WARNING

- Avoid using (EP) gear oils in worm gears that contain sulfur-phosphorous chemistries, as these additives can react adversely with bronze worm gears and accelerate wear.
- Food grade lubricants must be in compliance with FDA 212 CFR 178.3570 and qualify as a NSF-H1 lubricant. Please consult with lubrication manufacturer for more information.
- When making a lubrication change, check with the lubrication supplier to assure compatibility and to obtain recommended cleaning or flushing procedures.
- Do not to mix different oils with different additive packages or different base oil formulation types. Polyglycol (PG) oils are not miscible with other oil types and should never be mixed with mineral or polyaolpha-olefin (PAO) oils.

Helical In-line footed lubrication

The following NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. For additional information, please refer to the "Oil Plug & Vent Locations" documentation for your gear unit.

HARMFUL SITUATION

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil level plug and drain or add addition oil as needed. The minimum acceptable oil level is 0.15 in (4mm) below the oil level hole.

For mounting orientations other than shown please consult NORD Gear. Reducer modifications may be required.

HELICAL IN-LINE FLANGED OIL FILL QUANTITIES

Helical In-line flanged lubrication

The following NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. For additional information, please refer to the "Oil Plug & Vent Locations" documentation for your gear unit.

HARMFUL SITUATION

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil level plug and drain or add addition oil as needed. The minimum acceptable oil level is 0.15 in (4mm) below the oil level hole.

For mounting orientations other than shown please consult NORD Gear. Reducer modifications may be required.

*** For shipping purposes the larger Clincher™ gear units are supplied without oil.**

† Oil quantities shown are for the gearbox only. When the OT (oil tank) option is used, the oil must be filled to the level shown on the dipstick which is located inside of the oil tank. Even when the gear unit is filled by NORD, the user MUST add more oil untill the oil is filled to the proper level.

92 SERIES HELICAL-BEVEL FLANGED OIL FILL QUANTITIES

92 Helical-bevel flanged lubrication

The following NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. For additional information, please refer to the "Oil Plug & Vent Locations" documentation for your gear unit.

STOP ***HARMFUL SITUATION*** **STOP**

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil level plug and drain or add addition oil as needed. The minimum acceptable oil level is 0.15 in (4mm) below the oil level hole.

For mounting orientations other than shown please consult NORD Gear. Reducer modifications may be required.

NORDBLOC®.1 FLANGED OIL FILL QUANTITIES

NORDBLOC®.1 flanged lubrication

The following NORD Gear reducers are shipped from the factory with a pre-determined oil fill level in accordance to the specified reducer size and mounting position. For additional information, please refer to the "Oil Plug & Vent Locations" documentation for your gear unit.

HARMFUL SITUATION

Actual oil volume can vary slightly depending upon the gear case size, mounting and ratio. Prior to commissioning the reducer, check the oil-fill level using the reducer's oil level plug and drain or add addition oil as needed. The minimum acceptable oil level is 0.15 in (4mm) below the oil level hole.

For mounting orientations other than shown please consult NORD Gear. Reducer modifications may be required.

MINICASE® (SM SERIES) WORM GEAR OIL FILL QUANTITIES - FOOT HOUSING

MINICASE® (SM Series) Lubrication

NORD MINICASE® (SM Series) worm gear reducers and worm gearmotors are inherently maintence free, factory oil filled, and supplied with a high quality, long life synthetic gear oil intended to be suitable for the life of the product. These gear units are also supplied without oil service plugs or vents.

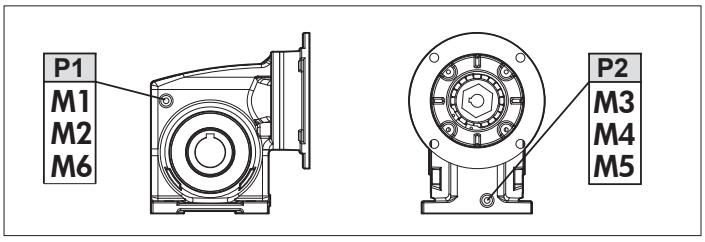
Continuous Input speed ≤ 1800 rpm

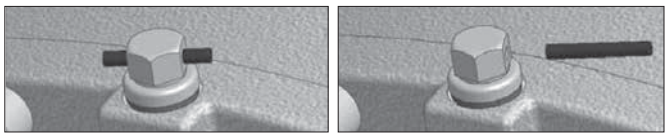
Vent Kit Part Numbers

Type	Transportation Seal	Installation	Part Number
AUTOVENT™	Included	Factory or Field site	66093510
Open Vent	None	Field Only	60693500
Open Vent	Included	Factory or Field site	22008004 (vent) 25308120 (gasket)

Unless noted by a seperate part number, vent kits include the housing gasket

Optional Vent Locations





⚠ WARNING ⚠

To prevent build-up of excessive pressure, sealed vents must be activated as shown prior to gear unit start-up.

FLEXBLOC™ (SI/SID SERIES) WORM GEAR OIL PLUG & VENT LOCATIONS

Vent locations

FLEXBLOC™ (SI?SID SERIES) reducers are fitted with oil plugs to allow for optional venting of the gear unit. NORD can supply either an AUTOVENT™ (valve-type) vent or an open vent. Vent options are available for most gear unit sizes and positions as indicated by the table below. For more complete details on vent options and when to consider reducer venting, see user manual U10810.

Vent Compatability by Unit Size & Mounting Position

	M1	M2	M3	M4	M5	M6
SI/SID 31		✓	✓	✓		✓
SI/SID 40		✓	✓	✓		✓
SI/SID 50	✓	✓	✓	✓		✓
SI/SID 63	✓	✓	✓	✓	✓	✓
SI/SID 75	✓	✓	✓	✓		✓

Continuous Input speed ≤ 1800 rpm

TROUBLESHOOTING

Troubleshooting

This section identifies some of the most common issues involved with NORD Gear speed reducers , and provides recommendations to assist you in defining and answering your questions as you work with our products. You may also contact our Engineering/Application departments if your questions are not answered in the table below.

Problem With the Reducer		Possible Causes	Suggested Remedy
Runs Hot	Overloading	Load exceeds the capacity of the reducer	Check rated capacity of reducer, replace with unit of sufficient capacity or reduce the load.
	Improper lubrication	Insufficient lubrication	Check lubricant level and adjust up to recommended levels
		Excessive lubrication	Check lubricant level and adjust down to recommended levels.
		Wrong lubrication	Flush out and refill with correct lubricant as recommended
Runs Noisy	Loose foundation bolts	Weak mounting structure	Inspect mounting of reducer. Tighten loose bolts and/or reinforce mounting and structure.
		Loose hold down bolts	Tighten bolts
	Failure of bearings	May be due to lack of lubricant	Replace bearing. Clean and flush reducer and fill with recommended lubricant.
		Overload	Check rated capacity of reducer.
	Insufficient lubricant	Level of lubricant in reducer not properly maintained.	Check lubricant level and adjust to factory recommended level.
Output shaft does not turn	Internal parts are broken or missing	Overloading of reducer can cause damage	Replace broken parts. Check rated capacity of reducer.
		Key missing or sheared off on input shaft.	Replace key.
		Coupling loose or disconnected	Properly allign reducer and coupling. Tighten coupling.
Oil Leakage	Worn seals	Caused by dirt or grit entering seal.	Replace seals. Autovent may be clogged. Replace or clean.
	Unit runs hot or leaks	Overfilled reducer	Check lubricant level and adjust to recommended level.
		Vent clogged.	Clean or replace, being sure to prevent any dirt from falling into the reducer.
	Incorrect fill level	Improper mounting position, such as wall or ceiling mount of horizontal reducer.	Check mounting position on the name tag & verify with mounting chart in manual.

1. Overview

This user manual applies to NORD Motor products and it provides general information for motor operation, installation, maintenance, inspection, repair, and trouble shooting, which is relevant to most of the motor products shipped by NORD. Information and instructions provided in this manual, safety and commissioning information and all other manuals applicable to any items supplied by NORD must be observed.

This instruction manual is not intended to include comprehensive details and information related to all possible design variations or accessories options available with NORD motors. If there is any uncertainty about specific procedures, instructions or motor details, then please refer these questions to NORD for additional information or clarification.

Before installing, operating, or performing maintenance on any electrical motor become familiar with the following:

- The detailed operating instructions and wiring diagrams.
- All applicable national, local and system-specific regulations, codes and practices.
- The national / regional regulations governing safety and accident prevention.
- The proper use of any tools, transportation or hoisting equipment, and safety equipment needed to complete the installation.
- To avoid serious injury or possible damage to the equipment or machine, compliance with all safety and information notes is mandatory!

⚠ *WARNING* ⚠

All work involved in the transport, connection, commissioning and maintenance of any NORD product must be carried out by qualified and responsible technicians. All applicable national, regional, and local work regulations and safety requirements must also be complied with. NORD assumes no liability for personal injury, accidental death, or equipment damage and malfunctions resulting from failure to comply with installation or operating instructions, safety notes, or any work regulations and laws!

⚠ *WARNING* ⚠

To avoid electrocution, injury or death, make certain the motor is properly grounded, completely de-energized and brought to a no-voltage condition prior to working on any electrical connections.

2. Motor Types

NORD AC electric induction motors described in this manual generally include the following types:

- Single speed or two-speed design.
- Three phase alternating current or single phase design.
- Enclosure types: TEFC, TENV, and TEBC.

3. Enclosure Types

Totally enclosed fan cooled (TEFC).

TEFC motor designs rely on fan that is mounted on the motor's rotor shaft so the cooling capacity can vary based upon the motor's operating speed.

Totally enclosed, non-ventilated (TENV)

The TENV motor designs rely purely on convection cooling and they have no fan. Often TENV designs are labeled for intermittent or periodic duty or at a lower power rating than is typical for the given motor frame size.

Totally enclosed, blower cooled (TEBC)

The TEBC design uses separate blower or ventilator fan, with its own low wattage motor and a separate power supply, to provide continuous airflow and cooling. The blower can be used to extend the speed range of the motor and allow extreme slow speed operation without causing a concern for overheating. Blower data is provided in Table 6, page 11.

4. Voltage and Frequency Variation

Voltage and frequency variations are based upon the assumption that the nameplate horsepower will not be exceeded and that the motor temperature may increase. Standard allowable deviations are based upon the type of motor labeling.

NEMA and CSA Labeled Motors

Variations are based upon the nominal utilization voltage, and not the service (supply) voltage as per ANSI C84.1.

Service Voltages	Utilization Voltages
120V, 208V, 240V, 480V, 600V	115V, 200V, 230V, 460V, 575V

- Voltage variation at rated frequency = ±10%.
- Frequency variations at rated voltage = ±5%.
- Combined voltage/frequency variation = ±5%.

CE Labeled Motors

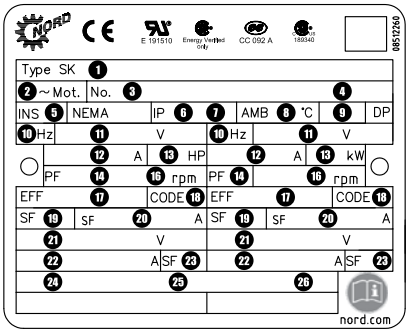
Per IEC 60038, allowable service voltage variations on in the current system, compared to the previous system, are as indicated.

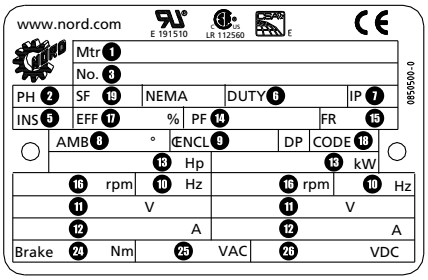
Previous Service Voltages	Current Service Voltages
220V, 380V, 660V	230V, 400V, 690V +6/-10%
240V, 415V	230V, 400V +10/-6%

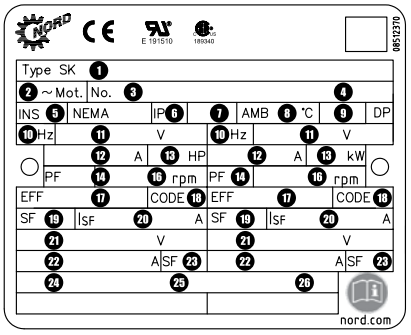
- Per EN 60034-1 a ±5% voltage variation and a ±2% frequency variation can be tolerated.
- The allowed variations are based upon the voltage (or voltage range) indicated on the motor nameplate.

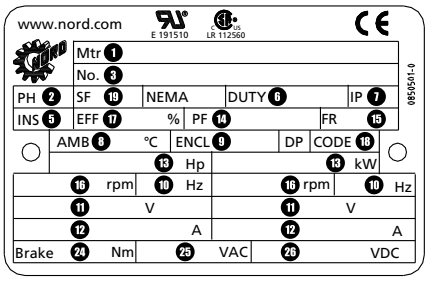
5. Motor Nameplate Information

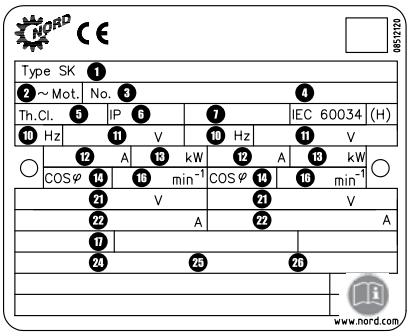
The motor nameplate and the display of technical information may vary slightly depending upon the global standard/s that the motor conforms to and the efficiency level. Please reference the examples below.











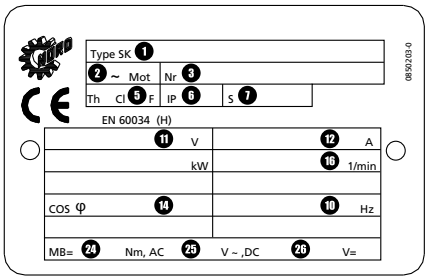


Table 1. Nameplate Data

Field	Definition
1	Model / Type
2	Number of Phases
3	Order Number
4	Serial Number
5	Insulation Class

26	Brake Coil Voltage (VDC)

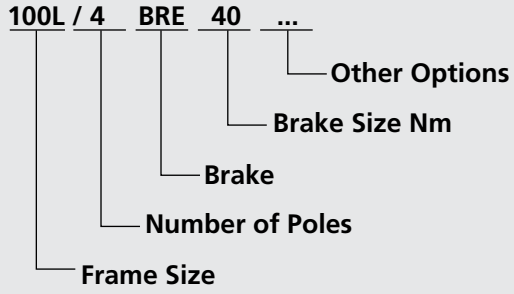
6. Motor Options And Nomenclature

NORD offers many options for its motors. The option code will be shown in the motor nomenclature. Below are commonly used options.

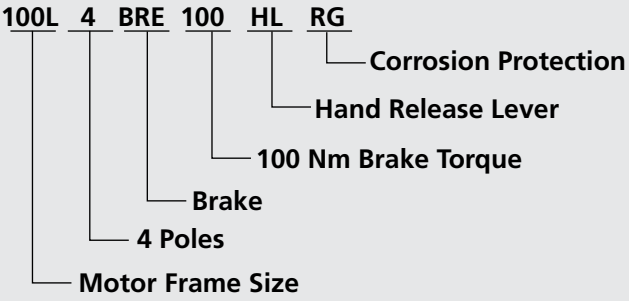
Code	Description
AICM	Additional Internal Insulation Coating Applied
BRE	With Brake
EAR	Single Phase, Start Cap/Run Cap
ECR	Single Phase, Start Cap/Run Cap Increased SF
EHB	Single Phase, Run Capacitor Only
EP	Epoxy Dipped Windings
F	Blower Cooling Fan - 3ph & 1ph
FC	Blower Cooling Fan - 1ph
FHL	Brake – Lockable Manual Release
H	Energy Efficient
HL	Brake – Manual Hand Release
IG	Incremental Encoder
IP66	IP66 Environmental Protection
IR	Brake – Current Sensing Relay
KB	Condensation Holes - Removable Plugs
KD	Condensation Holes - Open
MIK	Brake – Microswitch
MS	Power Plug Connector

Code	Description
OL	TENV Motor – Without Fan / With Cover
OL/H	TENV Motor - Without Fan & Cover
P	Premium Efficient Motors
RD	Canopy Cover
RDD	Double Canopy Cover
RG	Brake – Corrosion Protected
RLS	Backstop
SH	Motor Space Heater
SR	Brake – Dust Protected
TF	Thermistor
TW	Thermostat
VN	10:1 Constant Torque Rated Motor
VR	5:1 Constant Torque Rated Motor
VW	20:1 Constant Torque Rated Motor
VZ-F	1000+:1 Constant Torque Rated Motor
WE	2nd Motor Shaft End
WU	High Slip Rotor
Z	High Inertia Motor Fan

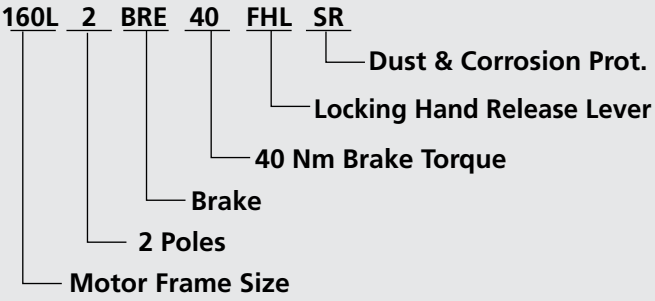
Motor Nomenclature



Ordering Examples



100 Frame Motor with 4 poles, Brake, 100 Nm with a hand release lever, corrosion protected brake, and a current sensing relay.



63 Frame Energy efficient motor with 4 poles, Brake, 40 Nm with a locking hand release lever and dust & corrosion protection.

7. Application Conditions

Standard NORD motors are designed to operate in dusty or moist environments and have anti-fungal, thermal class F insulation.

- Enclosure Protection Rating = IP55 (minimum).
- Maximum Installation Height = 3300 ft (1000 m).
- Ambient Temperature = -4 to 104°F (-20 to 40 °C).
- Tropical-proof, Thermal Class F insulation.

The protection level and maximum ambient temperature are stated on the motor nameplate.

IMPORTANT NOTE

NORD can provide motors for an expanded range of applications and service conditions including higher protection levels, extreme ambient conditions and, higher altitudes.

WARNING

Consult NORD for recommendations if motors are operated under extreme loading conditions, exposed to high inertia loads, or need to operate under unusually high cycling conditions with high starting and stopping frequency.

WARNING

Special design and assembly considerations are needed if NORD motors are subject to any of the following conditions:

- Outdoor installation with motor in a vertical position.
- Direct contact with aggressive or corrosive materials (acids, bases, salts, certain gases, etc.).
- Exposure to extreme high or low temperatures, high relative humidity, condensation moisture or very wet environments.
- Subject to extreme material build-up on the unit (dirt, dust, sand, etc.).
- Hazardous Locations (risk of fire or explosion).

8. Transportation

During transportation observe the following:

- Make sure that all eyebolts and lifting lugs are tight and firmly against their supporting surface.
- Use all the lifting eyes that are intentionally supplied with the motor.
- Lift only at designed points.
- Protect the mounting surface from possible damage during transportation.
- Always use sufficiently rated handling equipment, lift mechanisms and lifting straps.
- With heavier objects or unbalanced loads, it may be appropriate to use more than one lifting point or an additional strap or sling to assure safe transportation of the assembly. This is especially true of assembled gearmotors and motorized reducers.
- Once the NORD motor or assembly is properly installed, remove the transportation fixtures completely or make certain they are properly re-secured and tightened.

WARNING

Transportation – Use of Lifting Devices

To avoid death, serious injury or equipment damage…

- Hoisting lugs or lifting eyes attached to the motor are designed for the weight of the motor only! Do not attach any additional loads!
- The motor must only be transported and lifted using the lifting eyes, in a position that is appropriate for its type of construction. Otherwise, it could fall over or slip in the lifting tackle.
- During suspended transport, two straps must be able to carry the entire load weight safely.
- When required use additional, suitable means of support for transportation, installation or removal.
- Always secure the support equipment to prevent it from slipping.

9. Storage

If the motor is not in service, store it according to the following conditions:

- Store the motor in a clean, dry, dirt-free, vibration free area.
- Storage temperatures of 10°C (50°F) to 50°C (120°F) must be maintained.
- Relative humidity must not exceed 60%.
- If vibration in the area exceeds 0.002 inch (0.05 mm) at 60 hertz, then vibration isolation pads are suggested to prevent brinelling of the bearings.
- Treat the unprotected shaft end and mating flange surfaces with a corrosion inhibitor that can be cleaned off prior to commissioning.
- Before placing the motor into service, visually inspect the motor exterior for evidence of deterioration during storage. Turn the motor shaft by hand to make sure the shaft turns freely.
- Motor space heaters, when provided, are to be connected and energized whenever there is a possibility that the storage ambient conditions will reach the dew point. Space heaters are optional. Remove motor from the storage container when the heater is energized.
- If the motor needs to be stored for extended periods, or if it is stored in less than favorable conditions, it is recommend that the winding insulation resistance be checked prior to commissioning (page 7).
- Even if stored in favorable conditions, the antifriction motor bearings and motor shaft seals may need to be replaced if the storage period is more than 4 years.

10. Safety Considerations

When installing, servicing or replacing electric motors it is important to be working in a “voltage-free” state. Observe the following safety rules.

Five Safety Rules

1. Disconnect the system. Disconnect the auxiliary circuits (brakes, space heaters, etc.).
2. Prevent reconnection (follow safe lock-out/tag-out practices).
3. Make sure that the equipment is at zero voltage.
4. Make certain the equipment is properly grounded and short-circuited.
5. Cover or isolate nearby components that are still electrically live.

To energize the system, apply the measures in reverse order.

Qualified Personnel

All work involved in the transport, connection, commissioning and maintenance of any NORD product must be carried out by qualified and responsible technicians.

For the purpose of this documentation, a qualified personnel is taken to mean a person or people who fulfill the following requirements:

- Through appropriate training and experience, they are able to recognize and avoid risks and potential dangers in their particular field of activity.
- They have been instructed to carry out work on the machine by the appropriate person responsible.
- They are responsible for knowing and complying with all applicable national, regional, and local work regulations and safety requirements.

10. Safety Considerations Ctd.

General Warnings and Cautions

⚠ WARNING ⚠

To avoid electrocution, injury or death, make certain all electrical devices (motors, brakes, variable frequency drives, etc.) are properly grounded, completely de-energized, and brought to a no-voltage condition prior to working on any electrical connections. Remember that most of these devices carry potentially dangerous energy levels for a period of time after power is removed. Always follow proper lock-out/tag-out procedures.

⚠ WARNING ⚠

Electrical machines contain dangerous voltage levels, electrically live parts, rotating surfaces and hot surfaces. To prevent injury, death or possible equipment damage always observe the following:

- Keep all safety covers and guards in place during operation. Remove and replace covers in compliance with the applicable safety regulations.
- Allow the machine to cool down before starting any work on it.
- Operate the machines properly.
- Perform regular maintenance on the machine.
- Secure and guard free-standing shaft extensions.

⚠ WARNING ⚠

Electrically Live Parts

Electrical machines contain electrically live parts. Fatal or severe injuries and substantial material damage can occur if the required covers are removed or if the machines are not handled, operated, or maintained properly.

⚠ WARNING ⚠

Rotating Parts

Electrical machines contain dangerous rotating parts. Fatal or severe injuries and substantial material damage can occur if the required covers are removed or if the machines are not handled, operated, or maintained properly.

⚠ WARNING ⚠

Hot Surfaces

Electrical machines have hot surfaces. Fatal or severe injuries and substantial material damage can occur if the required covers are removed or if the machines are not handled, operated, or maintained properly. Allow the machine to cool down before starting any work on it.

⚠ WARNING ⚠

Maintain Proper Cooling

Operating the motor without the intended cooling fan may cause overheating and result in very hot surfaces, personal injury and material damage. Never commission a motor intended to be fan cooled when it is missing the shaft-driven fan or external blower assembly.

⚠ WARNING ⚠

Condensation Drain Holes (Optional)

Inserting objects into the condensation drain holes can damage the winding and can result in death, serious injury and damage to property!

- Before opening sealed drain holes, make sure the motor is in a no-voltage condition. Close the condensation drain holes before re-commissioning.
- Exercise caution around drain holes that are intended to be left open, especially when the motor is energized.

STOP HARMFUL SITUATION STOP

Before start-up check the following:

- All electrical connections are secure, well grounded and properly made.
- The motor is rotating in the correct direction (when de-coupled from the driven load).
- There are no temperature-sensitive parts (cables etc.), in contact with motor enclosure.
- Condensation drain holes are always located at the lowest point of the motor.

11. Checking the Insulation

Before putting the motor into operation for the first time, after a lengthy period of storage or standstill (approx. 6 months), the insulation resistance of the winding should be checked.

⚠ WARNING ⚠

During and directly after measurement the motor connection terminals carry hazardous voltages.

A. Control

The insulation resistance of new, cleaned, or repaired motor windings against the grounded housing and against one another should be > 200 Mega-Ohms.

B. Measurement

Using a Mega-Ohm meter apply a DC voltage of 500 VDC to the motor winding for a period of 60 seconds and record the winding insulation resistance compared to ground.

- The 500 VDC test voltage is applicable to low voltage motors up to 1000 VAC.
- When performing this test the temperature of the windings should be 25°C ± 15°C (77°F ± 27°F).

C. Verification

- If the insulation resistance of the winding is less than 50 Mega-Ohms, the cause may be moisture. The windings should be dried and the test should be repeated.
- After any lengthy period of operation the insulation resistance may drop. So long as the measured value does not fall below the critical value of 50 Mega-Ohm, the motor may continue to be operated.
- If the measured value falls below the critical 50 Mega-Ohm level, the cause must be established and the windings or winding sections must be cleaned, dried, repaired, or replaced as needed.

12. Bearing Lubrication

NORD motor frame sizes 63 up to and including 225 are normally supplied with internally grease lubricated bearings and require no lubrication during normal operation.

NORD motor frame sizes 250 and larger are supplied with grease fittings for re-greasing the motor bearings.

IMPORTANT NOTE

Motors with grease fittings are normally supplied with a label indicating the grease type used, the suggested re-lubrication interval, and the amount of new grease to be applied. General bearing maintence guidelines are listed in Table 3.

Typical motor bearing grease is an NLGI No. 2 consistency, high grade product with a polyurea base thickener, synthetic or blended mineral/synthetic oil, and stabilizing agents to protect against heat and oxidation.

Table 3 – Motor Bearing Maintence Guidelines

Frame Size	Power	Poles	Re-greasing Interval
63-225	0.16-60 HP (0.12-45 kW)	All	Maintence Free
250 to 280	75-125 HP (55-75 kW)	2	4000 h
		4 to 8	8000 h
315	150-250 HP (132-200 kW)	2	3000 h
		4 to 8	6000 h

STOP HARMFUL SITUATION STOP

When re-greasing motor bearings do not to mix different greases without verifying the compatibility with a reputable grease lubrication supplier. Mixing incompatible products can lead to bearing failure.

13. Mechanical Installation

Integral motors, NEMA C-face motors, and IEC flange mounted motors must be rigidly secured to their mating connection surface using all fastening screws tightened to the proper bolt torque. It is good practice to apply a medium strength thread- locking agent (Loctite® 242) to the mounting screws.

Foot mounted motors must be securely installed to a rigid and level foundation or mounting surface to minimize vibration and maintain alignment between the motor and shaft load. All mounting hole locations must be utilized. Tighten all hold down screws or bolts to the proper bolt torque.

STOP HARMFUL SITUATION STOP

Failure to provide a proper mounting surface may cause vibration, misalignment and bearing damage.

Accurate alignment and proper balancing of output devices (couplings, belts, pulleys, etc.) is required to assure quite, low vibration, trouble free operation. When the motor is directly coupled to a gear drive or a driven machine make sure that the motor shaft and driven machine shaft are aligned with one another axially.

STOP HARMFUL SITUATION STOP

Inaccurate alignment may lead to bearing damage, excessive vibrations and shaft breakage.

IMPORTANT NOTE

For motor replacement guidelines see section 20 on page 15 and section 21 on page 16.

14. Electrical Connections

⚠ WARNING ⚠

To avoid electrocution, injury or death, make certain all electrical devices (motors, brakes, variable frequency drives, etc.) are properly grounded, completely de-energized, and brought to a no-voltage condition prior to working on any electrical connections. Remember that most of these devices potentially dangerous energy levels for a period of time after power is removed. Always follow proper lock-out/tag-out procedures.

IMPORTANT NOTE

External motor brakes have their own connection requirements as indicated in the appropriate brake instruction manuals.

⚠ WARNING ⚠

If the motor has an integral brake, make certain there is no load connected to the driven equipment before releasing the brake. Otherwise serious injury, death, or damage to the equipment may result.

- The supply voltage and frequency must agree with the motor nameplate data.
- Always feed the connecting leads into the terminal box using appropriate mating cable glands. The mating connection cables and cable glands should be suitable for temperatures ≥ 194°F (90°C).
- Provide the ends of the connecting leads and ground lead with cable lugs or curved ring eyelets before connecting them to the terminal board.
- Make certain that the wiring connections and arrangement of the terminal board jumpers conform to the appropriate wiring diagram as provided in the motor terminal box and/or page 9 of this manual.
- Tighten the terminal board screw connections on the on the main terminal board per the table below.

Table 4 – Tightening Torque: Terminal Board and Grounding Screws

Thread Size	Nut Size [mm]	Tightening Torque [lb-ft]	Tightening Torque [N-m]
M4	7	0.6-0.9	0.8-1.2
M5	8	1.3-1.8	1.8-2.5
M6	10	2.0-3.0	2.7-4
M8	13	4.0-5.9	5.5-8
M10	17	6.6-9.6	9-13
M12	19	11.8-14.8	16-20

- Upon final assembly, the terminal box cover must be sealed so that it is dust-tight and water-tight.

Table 5 – Tightening Torque: Terminal Box Cover Screws

Thread Size	Tightening Torque [lb-ft]	Tightening Torque [N-m]
M4	0.6-0.9	0.8-1.2
M5	0.9-1.3	1.2-1.8
M6	1.1-1.8	1.5-2.5
M8	2.2-3.7	3.0-5.0

100	100 – 135	0.53	105	100 – 135	0.54	78
112	100 – 135	0.60	115	100 – 135	0.55	80

Table 6 – Option F & FC

16. Motor Accessories Ctd.

Thermostats (Option TW and Option 2TW)

Standard connection	Series connected, one per phase
Contact	NC (Normally Closed)/ Auto Re-setting
Response Temperature (Option TW)	311 °F (155 °C) Shut-Off Device
Response Temperature (Option 2TW)	311 °F (155 °C) Shut-Off Device + 266°F (130 °C) Alarm Device
Nominal Current	1.6 Amp at 250 V
Resistance	< 50 mΩ
Switch Rebound	< 1ms
Insulation Rating	2000 VAC
Cycles	10,000 max
Lead Identification (inside terminal box)	P1 and P2 or TB1 and TB2 / 2TB1 and 2TB2

Motor thermostats or bi-metallic switches can be wired directly into the control circuit without a separate control module or tripping device. Thermostats operate on a relatively high control voltage so they are much less sensitive to voltage interference from the main power supply. Often one can run thermostat leads and motor power leads next to each other when using the appropriate shielded cable. The installer is responsible to wire the thermostats into the motor control circuit. The leads may be labeled in a variety of ways as indicated.

Thermistors (Option TF)

Standard Connection	Three devices, series connected, one per phase
Type	Positive temperature coefficient (PTC)
Transition Temperature	150°C±5 °C
Resistance	20… 500Ω (below transition) > 4 kΩ (above transition)
Reed Current	< 1mA
Max Voltage	30V
Lead Identification (inside terminal box)	P1 and P2 or TP1 and TP2

With a separate control module or tripping device (ex. Kirwan INT69) thermistors are used to sense motor overload/ over temperature conditions by converting the critical operating temperature limit into large internal resistance change. Due to their small size, heat sink construction, and high change in resistance value, minor resistance variations caused by relatively long lead runs can be tolerated. This feature also allows for one controller to be used for several temperature sensing locations. Many variable frequency drives come with on-board thermistor inputs. NORD does not supply the thermistor control module.

⚠ WARNING ⚠

Thermostats and Thermistors will automatically reset.

⚠ WARNING ⚠

All wiring must be completed by qualified personal and adhere to all local codes.

Space Heaters (Option SH)

- Connection Diagram shown on Page 9
- Space Heaters are mounted directly on the motor winding
- The leads are brought into the terminal box and labeled H1 and H2
- They require a separate voltage supply and must not be energized when the motor is energized
- The heaters will keep the winding of the motor approximately 5°C above the surrounding ambient

Table 5. Space Heater Data

Frame Size	Wattage	Voltages	Heater Strips/MTR
63 & 71	18W	110V	1
		230V	
		460V	
80	25W	110V	1
		230V	
		460V	
90 – 112	50W	110V	2
		230V	
		460V	
132-180	100W	110V	2
		230V	
		460V	
200 & 225	120W	110V	2
		230V	
		460V	

Encoder (Option IG)

- Most standard encoders will be enclosed inside the fan cover
- Incremental, Quadrature, Differential, Marker Channel
- IP66 Protection
- IG1 = 1024PPR, IG2 = 2048PPR, IG4 = 4096PPR
- TTL/RS422, HTL/Push-Pull, Line Driver.
- 5V or 10-30V available.
- Absolute encoders also available.
- Seperate encoder wiring instructions are provided by NORD.

17. Inspection

Inspect the motor after every 500 operating hours.

⚠ WARNING ⚠

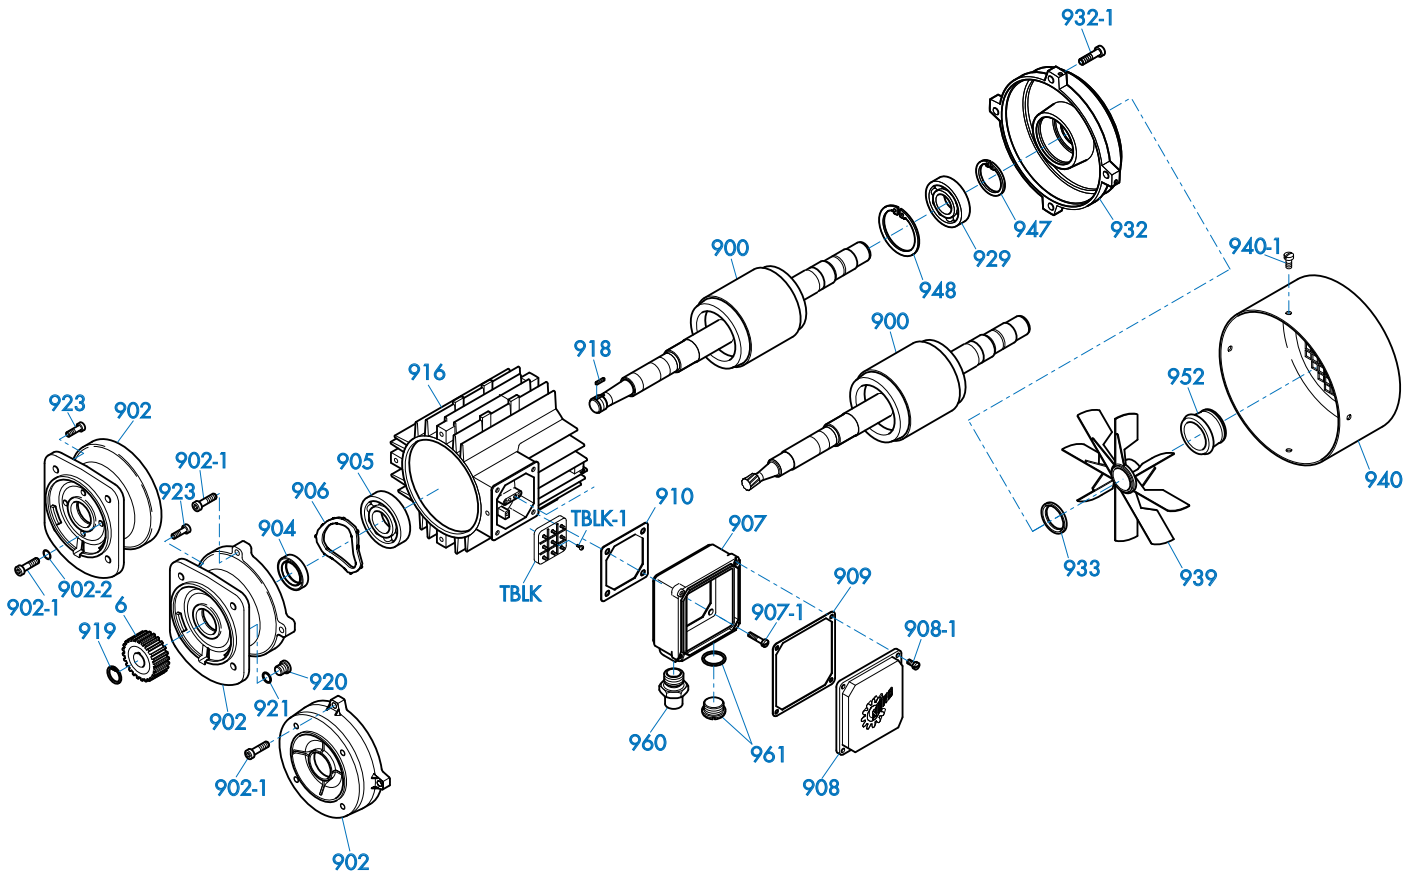
If it is necessary to clean the motor exterior, do not use shop air. Shop air can force contaminents into the motor and may cause parts damage or result in blowing debris causing injury.

Table 8 - Inspection Guidelines

Inspect	Check	Action
Motor Exterior	Check the external surfaces for contamination. Accumulation of dirt and fibrous deposits must be removed.	Clean the motor external surfaces using clean, lint-free cloths.
		Clean deposits from between cooling fins using a vacuum cleaner and a stiff-bristled nylon brush.
	Check the external surfaces for oil film and greasy deposits.	Clean the oil film and greasy deposits from the motor surface using clean, lint-free cloths.
		If necessary, moisten the cloth with an approved non-flammable, residue-free solvent. Do not pour solvent on the motor.
	Check for evidence of damage or overheating.	If the motor has physical damage, replace the motor.
Motor Mountings	Make sure the mounting hardware is secure.	If the mounting hardware is not secure, check the motor/gearbox alignment, and tighten the mounting hardware.
Motor Electrical Connections	Check that all electrical connections are secure.	If the electrical connections are not secure, tighten them.
	Check the electrical connections for evidence of arcing.	Loose electrical connections can cause arcing, which is evident by discoloration and charring. If you find evidence of arcing, replace the damaged connections.
Insulation Resistance	Using an ohmmeter, check and record the resistance of motor winding insulation.	Compare the current resistance reading to previous readings. If the resistance drops significantly, perform an internal inspection for insulation damage or deterioration.
Motor Brake	On motors that have a brake, use a feeler gauge to check the air gap in between the brake pad and the rotor according to the appropriate user manual.	If the air gap exceeds the maximum allowed for that brake configuration provided in the manual, adjust the air gap or replace the brake pad according to user manual U35000.

18. Parts List

If you are ordering a part, provide the model and order number (table 1, page 2) of your motor. This will determine the specific part number you need.



Part Number	Part Description	Qty per Assembly
6	Input Pinion	1
900	Rotor Assembly	1
902	A-Endbell	1
902-1	Screw	4
902-2	Dubo Seal	4
904	Oil Seal	1
905	Bearing	1
906	Preload Spring	1
907	Terminal Box Frame	1
907-1	Screw	4
908	Terminal Box Cover	1
908-1	Screw	4
909	Gasket - Terminal Box Frame	1
910	Gasket - Terminal Box Cover	1
916	Stator	1
918	Key	1
919	Retaining Ring	1
920	Oil Plug	1

Part Number	Part Description	Qty per Assembly
921	Gasket	1
923	Screw	4
929	Bearing	1
932	B-Endbell	1
932-1	Screw	4
933	Oil Seal	1
939	Fan	1
940	Fan Cover	1
940-1	Screw	4
947	Retaining Ring	1
948	Retaining Ring	1
952	Fan Clip	1
960	NPT Thread Adapter	1
961	Plug (includes O-ring)	1
TBLK	Terminal Block	1
TBLK-1	Screw, Terminal Block Mounting	2
	Jumper Bar (not illustrated)	AR

19. Repair

Reference the parts list drawing on page 14 for clarification.

A. Disassemble the motor according to the general exploded view in PARTS INFORMATION. Disassemble only as far as necessary to replace the failed parts.

B. Whenever the motor is disassembled, clean all dust and contamination from the motor interior using a vacuum cleaner and a soft-bristled nylon brush.

C. The following parts must be replaced if they are removed:

- Oil seal (904), Oil seal (933)
- Gasket (909), Gasket (910), Gasket (921)
- Gasket on plug (961)
- Self-locking screws (907-1, 908-1, 923, 932-1, 940-1)
- Dubo Seals (902-2)

D. If the following parts are removed, inspect them, and replace them if they are deformed or damaged:

- Retaining ring (919), Retaining ring (947), Retaining ring (948)
- Fan clip (952)

20. Removing and Replacing Integral Motors

Reference the parts list on Page 14 for clarification.

A. Disconnect the power to the electric motor. Make certain the motor is properly grounded, de-energized and secured with a lock-out/tag-out device.

B. Drain the oil from the mating gearbox, or rotate the motor/gearbox assembly so that the motor is up, to prevent oil from spilling from the gearbox when the motor is removed.

C. Support the motor and prepare it for removal. Steady the motor and support it. For larger motors, use of mechanical lifting or support devices to may be appropriate.

D. Remove the fastening screws that hold the motor to the reducer input.

IMPORTANT NOTE

Most integral motor installations have mounting bolts accessible from the motor exterior. If the bolts are not clearly visible, unbolt the input flange from the gearbox. Remove the bolts securing the motor to the reducer input flange, and discard the old DUBO sealing rings that were under the screw heads.

E. Maintain motor shaft alignment and move the motor directly away from its mounting surface until the motor shaft and mating input gear clear both the internal gear mesh and reducer input.

F. Remove and discard the old flange gasket.

G. Clean the gasket faces on the motor and gearbox, making sure no cleaning debris enters the gearbox.

H. Check the replacement motor to make sure the motor flange, motor shaft, and motor pinion are identical to the motor that was removed.

I. Place a new gasket between the gearbox and new motor.

J. Position the motor on the gearbox, making sure the input pinion meshes with the input gear. Rotate the motor as necessary to align the bolt holes and seat the motor flange. Make sure the gasket remains properly aligned and seated

K. Apply a medium strength thread locking compound to the bolt threads. Install the bolts and tighten them to the appropriate torque.

IMPORTANT NOTE

If the motor/gearbox installation uses an input flange, first mount the input flange to the motor using the four mounting bolts and NEW DUBO sealing rings under the head of each fastening screw. Make sure the fastening screws are clean and apply new thread sealant if necessary.

L. Check the gearbox oil level in accordance with the appropriate User Manual/s. If necessary fill or add oil to the gearbox.

HARMFUL SITUATION

Do not mix different types of oil!

M. Re-establish the electrical connection to the motor.

N. Observe the subsequent start-up closely to make certain the equipment is operating properly and there are no seal or gasket leaks.

21. Removing and Replacing NEMA C-Face or IEC Fange-Mounted Motors

For further clarification of these instructions, reference the parts list on Page 14 of this manual.

A. Disconnect the power to the electric motor. Make certain the motor is properly grounded, de-energized and secured with a lock-out/tag-out device.

B. Support the motor and prepare it for removal. Steady the motor and support it. For larger motors, use of mechanical lifting or support devices to may be appropriate.

C. Remove the fastening screws that hold the motor to the C-face or IEC mounting flange.

D. Maintain motor shaft alignment, and move the motor directly away from its mounting surface until the motor shaft and mating coupling clear the mounting flange surface of the driven equipment.

E. Measure and record the proper placement of the motor shaft coupling prior to removing it from the old motor.

F. Make sure the new motor shaft, key and key slot are free of all nicks, burrs, and lubrication or grease.

G. Install the new shaft key on the new motor. If the shaft key is not captured or if an open-ended key slot is utilized it is good practice to secure the key into the key slot with a medium strength thread locking agent or alternatively one may stake the key in place.

H. Re-install the coupling on the new motor shaft, making sure the placement of the coupling is in the same location as it was on the old motor (See Step E).

I. Clean all old gasket material, sealants, contamination, and corrosion from the flange surface on the driven equipment.

J. If the motor is utilized in a wet or wash down environment apply a sealing gasket or gasket eliminating compound to the mating flange surface, as would seem most appropriate for the application.

K. Support the new motor and mount it flush against the mating flange surface of the driven equipment.

L. Apply a medium strength thread locking agent to the bolt threads.

M. Install the bolts and tighten them to the appropriate torque.

N. Re-establish the electrical connection to the motor.

O. Observe the subsequent start-up closely to make certain the equipment is operating properly.

22. Testing

IMPORTANT NOTE

NORD electric motors do not require periodic testing. However, if a motor is removed from its installation, NORD recommends that the motor be checked according to the following static and dynamic testing procedures before it is reinstalled. Finding a condition that will require future repair before the motor is reinstalled decreases the overall maintenance time.

This section provides general test information and functional checks for the types of motors covered by this manual. Read and understand the tests and checks before performing them on your motor.

Record and date all measurements taken.

If the motor fails any of the test procedures provided below, use the troubleshooting guide to determine the motor problem.

Static Testing

A. The motor can only be static tested if it is disconnected from the component it drives and securely mounted on a fixture or mounting plate. These tests are usually conducted when a motor has been removed for any reason other than failure

B. Turn the motor shaft slowly by hand. Feel and listen for evidence of a failed bearing, which is indicated by a rough feel as the shaft rotates, and by noise.

C. Check for smooth rotation, with no evidence of binding or catching. If the shaft does not rotate smoothly, or binds or catches, the bearings are worn or failing, lack lubrication, or are contaminated.

D. Check the motor shaft for side play by applying pressure at right angles to the shaft in several places around the circumference. If the shaft moves perceptibly, the front bearing may be worn.

Dynamic Testing

A. Find the motor voltage and rated load current values as listed on the motor nameplate.

B. Using a volt-ohmmeter, verify that the motor power supply is in the correct range.

C. Run the motor with no load. As the motor is operating, listen for unusual motor noise and check for excessive vibration. Vibration and motor noise are indications of bearing contamination, lack of lubrication, damage, or failure.

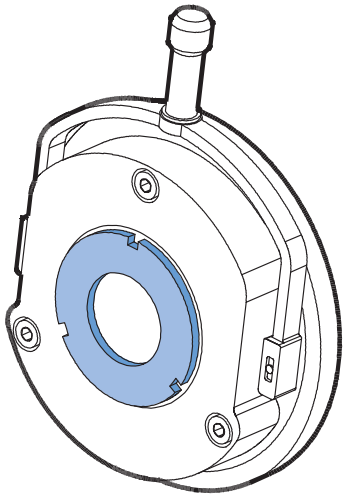
D. Use an ammeter to measure the no-load current. Record the no-load current for comparison with previous readings, and for reference during future testing.

E. If the motor passes the no-load test, operate the motor at rated load and check and record the current.

F. Check the motor operating temperature at rated load. If the motor operates at a higher than normal temperature, the motor may be damaged, overloaded or failing.

23. Troubleshooting

Fault	Likely Cause	Corrective Action
Motor fails to start.	• Motor is mis-wired • Brake is may not be releasing. • Fan guard damaged and contacting fan. • Motor protection device has tripped or does not switch • 1-Ph Capacitor or start switch has failed.	• Verify and correct motor wiring. • Troubleshoot brake per User Manual U35000. • Replace damaged fan guard. • Check motor protection device for correct setting and correct error. • Discharge capacitor and use a volt-ohm meter to check the capacitor for an open circuit - replace if needed. Inspect switch and connections. Replace if contacts look burned or pitted.
Fuses blow or motor protection faults immediately.	• Short circuit in line. • Lines connected incorrectly. • Fuse or circuit breaker tripped. • Motor is overloaded or equipment jammed. • Stator is shorted or went to ground.	• Rectify short circuit. • Check circuit diagram and make corrections. • Replace fuse or circuit breaker. • Make sure load is free. Verify motor amp draw compared to nameplate rating. • A damaged or blown stator will show a burn mark. Stator must be repaired or replaced.
Motor hums and has high current consumption	• Brake may not be releasing. • Rotor may be rubbing stator. • Defective or incorrect stator winding.	• Troubleshoot brake per User Manual U35000. • Send motor to a repair specialist.
Severe speed loss under load or excessive acceleration time.	• Overload. • Excessive voltage drop. • Damaged or failing motor bearings. • Damaged or worn gear unit. • 1-Ph Capacitor or start switch has failed.	• Check load conditions and make certain system is unobstructed. Reduce load or consider a larger motor. • Verify service voltage is within specification. Check if nearby equipment is affecting incoming power. Make sure connection harness and wiring is adequate. • Replace motor bearings. • Replace or repair damaged gear unit. • See instructions under "Motor fails to start".
Motor runs the incorrect direction.	• Incorrect wiring.	• Rewire motor according to system schematic and/or switch two incoming motor phases.
Motor heats up excessively or thermal overload protection trips	• Overload. • Ambient temperature is too high. • Inadequate cooling. • Operation is outside the allowed duty cycle. • Motor protection device may be defective. • Excessive supply voltage. • System short or damaged stator.	• Make sure load is free. Verify motor amp draw compared to nameplate rating. Reduce load or consider a larger motor. • Do not operate above the rated conditions. • Correct cooling air supply. Open and clear cooling air passages. Retrofit with forced ventilator fan if needed. • Adjust operating duty cycle or contact a specialist to select a suitable motor or drive. • Replace motor protection device. • Adapt motor supply voltage. • Check for loose, cut or damaged wires. Check stator winding for defects or burn damage.
Excessive Noise or Vibration	• Motor bearings contaminated or damaged. • Excessive motor shaft end play. • Misaligned or imbalanced load.	• Test motor by itself. If bearings are bad noise may be heard or roughness detected. Replace bearings. Add lubrication if bearings have grease fittings. • Check shaft endplay with motor and system power disconnected. If shaft movement is excessive replace motor shaft bearings. • Check all mating shaft connections for proper alignment and correct all imbalanced load conditions.
1 Ph Start Capacitor Failures	• Motor is not coming up to speed quickly enough. • Motor is being cycled frequently • Start switch is defective or damaged.	• Verify motor size to load conditions. Motor should come up to speed in no more than 2-3 seconds. • Verify duty cycle and consult specialist for recommendations. • Replace start switch.
1 Ph Run Capacitor Failures	• Possible power surge to motor caused by transient voltage or lightening. • Excessive ambient temperature.	• Install proper surge protection. • Verify ambient conditions do not exceed nameplate value.



General Instructions

This manual describes general operating and maintenance guidelines for a majority of brake products shipped by NORD Gear. This instruction manual is not intended to include a comprehensive listing of all details or procedures required for installation, operation and maintenance.

Brakes covered in this manual are manufactured by PRECIMA. Please feel free to contact NORD with any questions about the supplied brake components.

Safety Notice

Only qualified personnel should attempt installation, operation and maintenance of NORD brakes. Read this manual in its entirety before operating, commissioning, servicing, or assembling the motor brake. If you have a question about a procedure or are uncertain about any detail, seek clarification and DO NOT PROCEED!

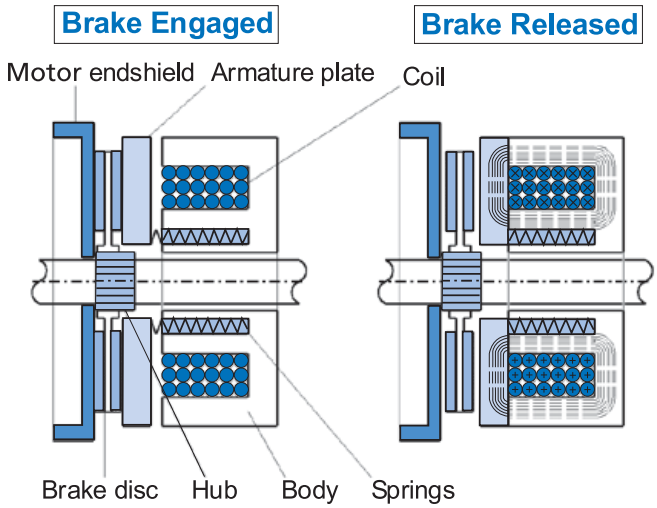
⚠ WARNING ⚠

- This equipment contains high electrical voltage. Remove and lockout all power from the electric motor and brake before any work is completed on the brake.
- The user is responsible for conforming to all national and local electrical and safety codes. Wiring practices, proper grounding, disconnects, and over current protection, are of particular importance.
- Make certain the load is supported when servicing the brake. Removing power from the brake or removing the brake from the motor will release the load, which may cause severe injury or death.
- Failure to follow proper procedures and precautions may result in severe bodily injury or death.

Brake Operation

The standard NORD motor brake is “spring-set”. When power is removed and the brake is de-energized (power-off), the brake springs exert a force against the armature plate in turn preventing the brake rotor (or brake disc) from rotating. When the brake coil is energized (power-on), a magnetic field builds and pulls the armature plate across the air gap to the brake casing, which releases the brake rotor and allows the motor shaft to rotate.

Figure 1: Basic Brake Operation



NORD brakes are DC voltage brakes and in most instances are supplied with a motor mounted brake rectifier for easy connections to AC power. AC power is taken directly from the power line or from the terminal block of the motor and converted to DC by the supplied rectifier.

IMPORTANT NOTE

If the motor is connected to a frequency inverter, soft start, or is a two-speed motor, the AC power must be supplied to the brake rectifier separately from the motor power.

Advantages

- Each NORD motor frame size has a number of brake sizes available, with different torque capacities.
- Brake torque adjustments are possible by changing the brake spring combinations. In addition, brake sizes from 5-40 Nm (3.7-30 lb-ft) are typically supplied with an additional spanner-nut adjustment on the back of the brake.
- NORD brakes provide a high degree of safety because when power is removed the brake will automatically set to hold the load.
- The brake rotor or brake disc is environmentally safe and asbestos-free.
- The connection between the rectifier and the brake coil is completed at the factory and the brake air-gap is factory-set but can be adjusted in the event of wear.

General Selection Considerations

As indicated in the NORD catalog, each NORD motor can be supplied with a number of brake torque sizes.

NORD relies on the equipment builder to specify appropriate brake sizing for their application, while giving consideration to the following:

- For most applications, we advise sizing the brake to 1.5 - 2 times the motor rated torque.
- For vertical applications, it may be advisable to size the brake size up to 3 times the motor rated torque.
- For some applications, it may be necessary to specify a reduced brake torque setting to prevent excessive peak load conditions developed at the reducer output.
- On travel drive applications, excessive brake torque may lead to wheel skid; in addition on crane applications excess hoist-cable swing can result.

⚠ CAUTIONS ⚠

- **Brake torque -** The brake torque is measured with a mean friction radius of the brake pad surface with a circumferential speed of 1m/sec (197 fpm).
- **Brake torque tolerance -** For different applications and operating conditions, brake torque can vary from +40/-20% compared to the rated brake torque.
- **Hoisting (lifting/lowering) applications -** must have the brake wired for fast response (DC-switching)
- **Initial operation & wear-in period -** In new condition, the brake will have a reduced torque of up to 30%. In order to achieve full rated brake torque, a short run-in period is required. The run in time will vary depending on system loads.
- **The brake rotor or brake pad -** must be protected against foreign matter, oil and grease. Contaminants of this type can greatly influence wear and reduce breaking torque.

Brake Torque Adjustment

Brake torque adjustments are possible by changing the brake spring combinations or by removing springs (Table 1).

In addition, brake sizes from 5-40 Nm (3.7-30 lb-ft) are typically supplied with a threaded adjustment nut or spanner nut to allow for additional fine torque adjustments of the brake. The braking torque can be adjusted by unscrewing the spanner nut a number of turns or "clicks" with a spanner wrench (Table 2).

Table 1a: Brake Torque Reduction - Spring Removal

"Brake Size"	7 Springs		5 Springs		3 Springs	
	[Nm]	[lb-ft]	[Nm]	[lb-ft]	[Nm]	[lb-ft]
BRE 5	5	3.7	3.5	2.6	2	1.5
BRE10	10	7.4	7	5.2	4	3.0
BRE20	20	14.8	14	10.3	8	5.9
BRE40	40	29.5	28	20.7	17	12.5
BRE60	60	44.3	43	31.7	26	19.2
BRE100	100	73.8	70	51.6	42	31.0
BRE150	150	111	107	78.9	65	47.9

On brake sizes 5-150 Nm (3.7-111 lb-ft) full brake torque is achieved with all (7) springs. The brake springs are placed in such a manner where there are (3) inner and (4) outer springs. When adjusting the brake torque, start by removing the outer springs at opposite corners to prevent uneven brake wear.

Table 1b: Brake Torque Reduction - Spring Removal

"Brake Size"	8 Springs		6 Springs		4 Springs	
	[Nm]	[lb-ft]	[Nm]	[lb-ft]	[Nm]	[lb-ft]
BRE250	250	184	187	138	125	92
BRE400	400	295	300	221	200	148
BRE800	800	590	600	443	400	295
BRE1200	1200	885	900	664	600	443

On brake sizes 250-1200 Nm (184-885 lb-ft) full brake torque is achieved with all (8) springs. The brake springs are placed in such a manner where there are (4) inner and (4) outer springs. When adjusting the brake torque, start by removing the outer springs at opposite corners to prevent uneven brake wear.

Table 2: Spanner Nut Adjustment

"Brake Size"	Torque Reduction*		Max. Turns	Minimum Torque✹	
	[Nm]	[lb-ft]		[Nm]	[lb-ft]
BRE 5	0.2	0.15	6	0.8	0.59
BRE10	0.2	0.15	12	1.6	1.18
BRE20	0.3	0.22	12	4.4	3.25
BRE40	1	0.74	9	8.0	5.90

✹ **With the minimum number of springs and maximum number of turns to the spanner nut.**

* **Per each turn of the spanner nut**

Brake sizes from 5-40 Nm (3.7-30 lb-ft) are typically supplied with a threaded adjustment nut or spanner nut. Additional fine torque adjustment can be made by unscrewing the spanner nut a number of turns or "clicks" with a spanner wrench.

Brake Control Rectifiers

NORD brake control rectifiers convert AC voltage to DC voltage. Rectifiers are used because most applications require AC voltage to power the motor, but DC power is required to power the brake and DC power is not typically available. NORD brake motors typically include the rectifier located inside the terminal box.

Rectifier Advantages

- Individual power source for each brake.
- Compact size, mounted inside the terminal box.
- Multiple types, voltage options and release/engagement modes available.
- Mountable in a separate control cabinet.
- Integral protection against voltage spikes.

Model	Type	Part No.	Color	Input Voltage V_{AC} ± 10%	Rated Current A_{DC} (40°C)	Rated Current A_{DC} (75°C)
GVE20L	Full-wave	19141000	Black	110-275	1.5	1.0
GVE20V	Full-wave	19141030	Black	110-275	1.5	1.0
GHE40L	Half-wave	19141010	Yellow	200-480	2.0	1.0
GHE40V	Half-wave	19141040	Yellow	200-480	2.0	1.0
GHE50L	Half-wave	19141020	Gray	200-575	2.0	1.0
GHE50V	Half-wave	19141050	Gray	200-575	2.0	1.0
GUE40V	Dual-wave	19140300	Black	230-460	0.7	0.5
PMG500	Push-Hybrid	19140200	Black	200-500	4.0	2.8

Rectifier electronics are sealed for moisture-protection; electronics on models ending with the suffix "V" are resin-encapsulated to provide added protection if water should get into the motor terminal box.

Rectifier Types

Full-wave rectifier [GVE]:
A rectifier in which both the positive and negative half-cycles of the AC input signal are rectified to produce a uni-directional DC current supply to the load or the brake. The output voltage is 90% of the input voltage ($V_{DC} = 0.90 \times V_{AC}$).

Half-wave rectifier [GHE]:
A rectifier in which only alternate half-cycles of the AC input signal are rectified to produce a uni-directional DC current supply to the load or the brake. The output voltage is 45% of the input voltage ($V_{DC} = 0.45 \times V_{AC}$).

Dual Wave Rectifier [GUE]
A rectifier that can be wired as either a full-wave rectifier or a half-wave rectifier depending upon how it is connected to the AC input signal.

IMPORTANT NOTE

If the motor is connected to a frequency inverter, soft start, or is a two-speed motor, then seperate AC power must be supplied to the brake rectifier.

Rectifier Types [Ctd.]

PMG 500 Push-Hybrid rectifier [PMG]:
A fast-acting or push-hybrid brake rectifier provides an initial "push" in the form of a timed full-wave brake-release function, which is then followed by a continuous half-wave brake-holding function. There are two ways to apply these rectifiers as follows:

- "Overexcitation" of the brake coil provides faster brake release or improved cycling capacity. The DC voltage of the brake coil is determined based upon using a half-wave rectifier. The output voltage is 45% of the input voltage ($V_{DC} = 0.45 \times V_{AC}$).
- "Reducer-Power Holding" of the brake coil maintains the brake in a released state by using only 25% of the power needed for the initial brake release. This results in very fast brake stopping. The DC voltage of the brake coil is determined based upon using a full-wave rectifier. The output voltage is 90% of the input voltage. ($V_{DC} = 0.90 \times V_{AC}$).

NORD offers additional fast-acting rectifiers besides the PMG 500. For additional details please reference User Manual U35100 – Fast Acting Brake Rectifiers.

IMPORTANT NOTE

In order to prevent rapid wear, the PMG 500 rectifier is required when utilizing the larger 800 Nm (590 lb-ft) and 1200 Nm (885 lb-ft) twin-rotor brakes. The PMG 500 rectifier is wired to "overexcite" the brake during its initial release.

Brake Switching Options

The rectifiers discussed in this manual can be wired to allow brake switching at either the AC power source (input) or the DC power source (output).

- AC switching allows the brake rectifier to be powered directly from the motor's terminal block with no additional wiring. However, this provides a slower brake stopping time due to the additional time needed to de-energize or collapse the motor's magnetic field.
- DC switching directly interrupts the current flow in the DC circuit of the brake rectifier. This method of brake switching guarantees faster brake stopping or brake engagement times.

WARNING

When the moving system undergoes a change in height (such as in a lift or incline conveyor application) or if the system tends to speed up or overhaul during normal operation, then DC-switching of the brake is required in order to prevent excessive load movement, drift or falling loads during stopping.

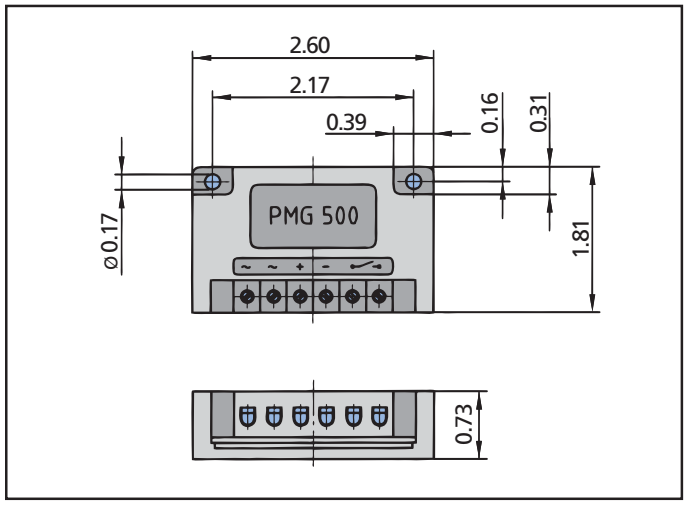
Figure 4.1: PMG 500 Dimensions



PMG 500 Push-Hybrid Rectifier

The PMG 500 rectifier provides an initial "push" the form of a timed full-wave brake-release function, which is then followed by a continuous half-wave brake-holding function.

- In order to prevent rapid wear, the PMG 500 rectifier is required when utilizing the larger 800 Nm (590 lb-ft) - and 1200 Nm (885 lb-ft) twin-rotor brakes.
- The PMG 500 rectifier is wired to "overexcite" the brake during its initial release. The DC voltage of the brake coil is determined based upon using a half-wave rectifier.

In some applications the PMG rectifier may be used for "Reduced Power Holding" or very fast brake engagement (See user manual U35100 for details).

IMPORTANT NOTE

If the motor is connected to an AC drive, soft start, or is a two-speed motor, the AC power must be supplied to the brake rectifier seperately from the motor power.

19095962	500	0.29	-	-	143	225	0.63	355

IMPORTANT NOTE

The PMG500 rectifier is required when utilizing the larger 800 Nm (590 lb-ft) - and 1200 Nm (885 lb-ft) twin-rotor brakes. In order to prevent rapid wear, NORD recommends using the PMG500 rectifier to "overexcite" the brake during its release. The brake coil should be sized utilizing the PMG rectifier like a half-wave rectifier.

Half-Wave [V_{AC}] = AC supply voltage with half-wave rectifier

Half-Wave [A_{AC}] = AC supply current to half-wave rectifier

Full-Wave [V_{AC}] = DC supply voltage with full-wave rectifier

Full-Wave [A_{AC}] = AC supply current to full-wave rectifier

Pc [W] = Power to brake coil

Vc [V_{DC}] = DC brake coil voltage (range -30% to +10%)

Ic [A_{DC}] = DC current top brake coil

Rc [V] = Brake coil resistance (±5%)

❶ When used as a stopping brake, evaluation of brake work is essential.

❷ Designed as a holding brake or emergency stop brake only.

Brake coil data based upon ambient conditions of 20°C (68°F).

General Maintenance

Brake Air Gap

In order to obtain optimal brake performance and maximum brake life, it is necessary to periodically check and reset the brake air gap. As the brake rotor wears and decreases in thickness, the air gap will increase. If the air gap is too large, the brake coil may not have enough magnetic force to pull the metal armature disc across the gap and the brake will drag.

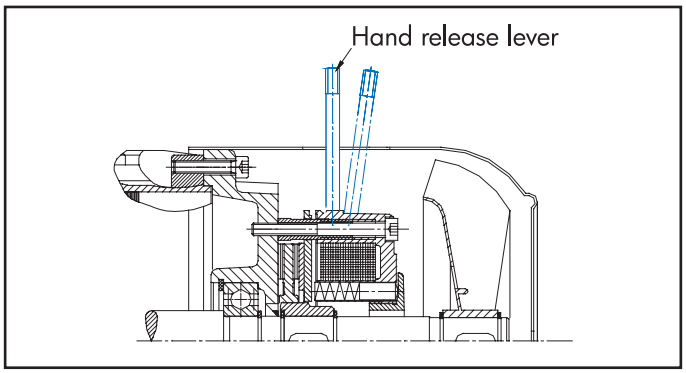
IMPORTANT NOTE

When a complete brake motor is supplied by NORD, the air gap is already set at the factory. If the brake is ordered as a part, the air gap must be set in the field. All brake air gap adjustments must be made with the brake assembled onto the motor and power off (brake engaged).

Hand Release Lever (HL)

It is common to supply the NORD brake with a hand release lever assembly. The hand release lever allows the brake to be manually released without requiring that the brake be energized with voltage. The lever has a spring return that allows the brake to be hand released and returned automatically to its set position. The handle of the hand release lever can be unscrewed for easy removal.

Figure 5

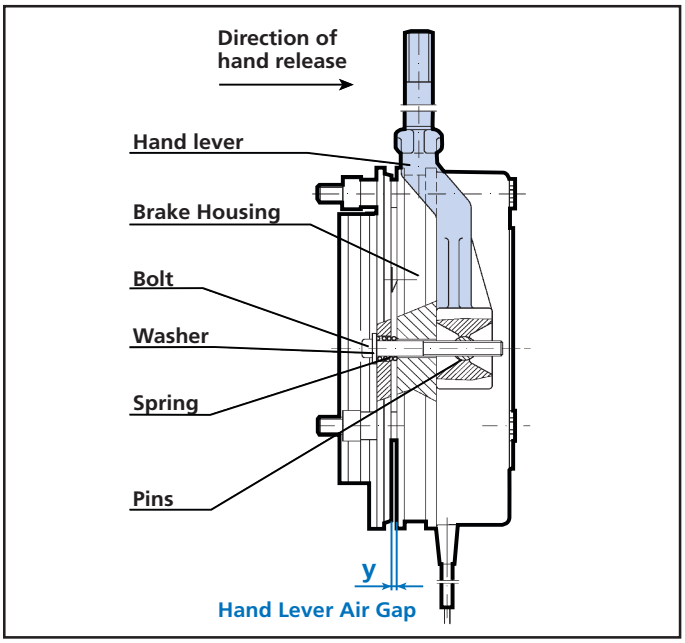


IMPORTANT NOTE

When a brake motor with hand-lever is supplied by NORD, both the hand lever air gap and brake air gap are set at the factory. When ordered as parts, proper hand-lever and air gap adjustments must be made in the field. Hand-lever adjustments must always be made prior to assembling the brake to the motor. All brake air gap adjustments must be made with the brake assembled to the motor and the power off (brake engaged).

Brake Hand-Lever Installation and Adjustment

Figure 6



1. Place the hand-lever over the brake housing (as shown) and align the pins.
2. Screw the bolts with washer and spring into the pins.
3. Using a feeler gage, adjust the hand-lever air gap per Table 5.

Table 5: Hand-Lever Air Gap Setting

Brake Size	Dimension "y" ❶ [mm]	[in]	Brake Size	Dimension "y" ❶ [mm]	[in]
BRE 5	1	0.040	BRE 100	1.2	0.047
BRE 10	1	0.040	BRE 150	1.2	0.047
BRE 20	1	0.040	BRE 250	1.5	0.059
BRE 40	1	0.040	BRE 400	1.5	0.059
BRE 60	1	0.040	BRE 800	1.5	0.059
			BRE 1200	1.5	0.059

❶ Tolerance: + 0.008 in [+ 0.2 mm]

IMPORTANT NOTE

When setting the hand-lever gap or dimension "y" the magnetic brake coil housing and the anchor plate must be kept uniform all around.

WARNING

- To assure proper assembly and proper functioning of the brake, the hand-lever must be assembled to the brake, and the hand-lever air gap must be adjusted, before the brake is assembled to the motor.
- Once adjusted properly, the hand-lever air gap setting should not be altered, even when readjusting the air gap setting.

Setting the Brake Air Gap

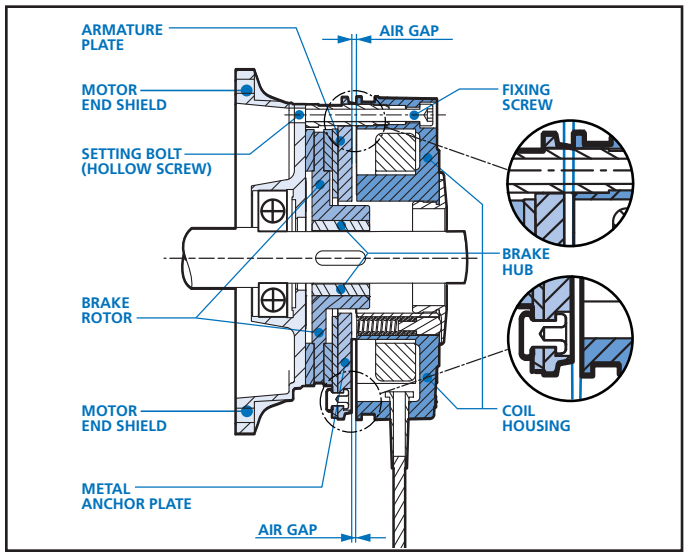
NORD spring-loaded brakes are virtually maintenance free. However, the air-gap of the brake rotor or brake disc must be periodically checked and adjusted. If necessary, the worn brake rotor must be replaced. Table 6 serves as guide to check and set the brake air gap as needed.

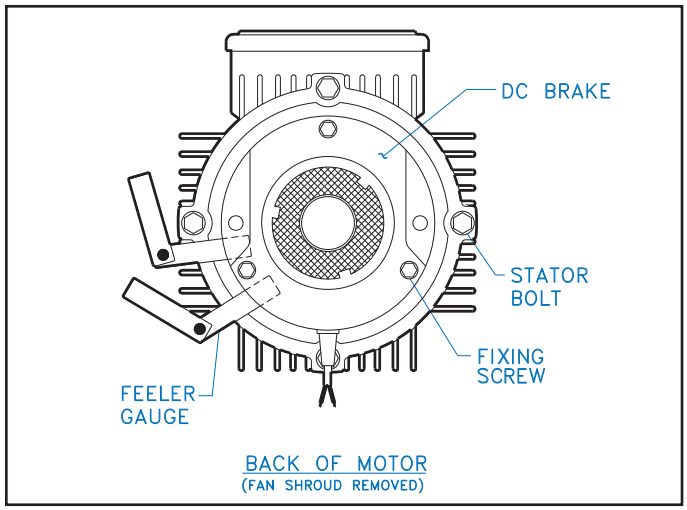
IMPORTANT NOTE

When a complete brake motor is supplied by NORD, the air gap is already set at the factory. If the brake is ordered as a part, the air gap must be set in the field. All brake air gap adjustments must be made with the brake assembled to the motor and the power off (brake engaged).

The brake air gap is checked by placing a feeler gage between metal anchor plate and the brake coil housing as shown in Figure 6. This procedure is identical even for the larger BRE800 and BRE1200 twin rotor brakes.

Figure 7 – Setting the Brake Air Gap





Procedure

1. Loosen the fixing screws that attach the brake to the motor's end-shield by approximately half a turn.
2. If required, the brake assembly may be loosened slightly from the motor's end shield by turning the threaded setting bolts (hollow screws) that surround the fixing screws, counter clockwise, into the brake coil housing.
3. Depending upon whether or not the air gap needs to be decreased or increased, turn the fixing screws accordingly until the desired nominal air gap (Table 6) is reached, as measured using the appropriate feeler gauge.
   - Turning the fixing screws clockwise allows the brake coil housing to be moved towards the anchor plate and reduces the air gap.
   - Turning the fixing screws counter-clockwise allows the brake coil housing to be moved away from the anchor plate and increases the air gap.
4. If the setting bolts (hollow screws) were adjusted as suggested in Step 2, re-secure the brake coil housing firmly against the motor's end shield by turning the setting bolts (hollow screws) clockwise, out of the brake coil housing.
5. Tighten the fixing screws to the appropriate torque.
6. Re-check and measure the air gap in multiple locations to check for appropriate spacing. Repeat the steps as needed until the desired air gap spacing is uniform and consistent all the way around the brake.

Table 6: Brake Air Gap Settings

Brake Size	Fixing Screw Tightening Torque		Nominal Air Gap Setting ❶		Maximum Air Gap ❷	
	[lb-ft]	[Nm]	[in]	[mm]	[in]	[mm]
BRE 5	2.2	3	0.008	0.2	0.024	0.6
BRE10	4.4	6	0.008	0.2	0.028	0.7
BRE20	7.4	10	0.012	0.3	0.031	0.8
BRE40	7.4	10	0.012	0.3	0.035	0.9

BRE800	37	50	0.028	0.7	0.047	1.2
BRE1200	37	50	0.028	0.7	0.047	1.2

❶ Tolerance: + 0.004 in [+ 0.1 mm]

❷ Brake air gap must be re-adjusted before the stated value.

❸ When using the stainless steel friction plate (RG) increase the nominal air gap to 0.6 mm (0.024 in.).

Brake Rotor (Brake Disc) Wear Assessment

Periodically the brake rotor or brake disc must also be checked for wear. If the brake rotors wear approaches the minimum allowed thickness, then the part should be replaced. Use Table 7 to determine whether or not the brake rotor requires replacement.

Table 7: Brake Rotor Thickness

Brake Size	Nominal Brake Rotor Thickness ❶		Minimum Brake Rotor Thickness ❷	
	[in]	[mm]	[in]	[mm]

BRE1200	0.866	22	0.689	17.5

❶ As new condition.

❷ Worn condition - brake rotor replacement is required!

Brake Pad Replacement (reference to parts list on page 8)

When the brake pad is worn the pad should be replaced to maintain proper brake operation and ensure safety.

Required Tools

- Phillips head screw drivers (fan shroud removal)
- External snap ring pliers (fan and brake hub removal).
- Large flat head screw driver or small pry bar (fan removal)
- Metric T-handle wrenches and open-end wrenches.

Procedure

1. Remove the fixing screws (946) securing the fan cover (940) to the motor end-shield (932). If the brake has a hand release (937), the lever arm should be removed by unscrewing it.
2. Remove the fan cover (940) and note the position of the hand release slot if applicable.
3. Remove the snap ring holding the cooling fan (939) and carefully remove the cooling fan (939), key and second snap ring (997).
4. If the brake is equipped with a dust boot (992), remove it.
5. Remove the socket head cap screws holding the brake coil (936) to the motor end-shield (932).
6. Remove the brake coil (936), noting the hand release (937) and power cable locations.
7. Slide the brake rotor (993) off the brake hub (938) which is secured to the motor shaft.
8. Clean the brake, install the new brake rotor pad and reassemble the brake in reverse order of the steps outlined.

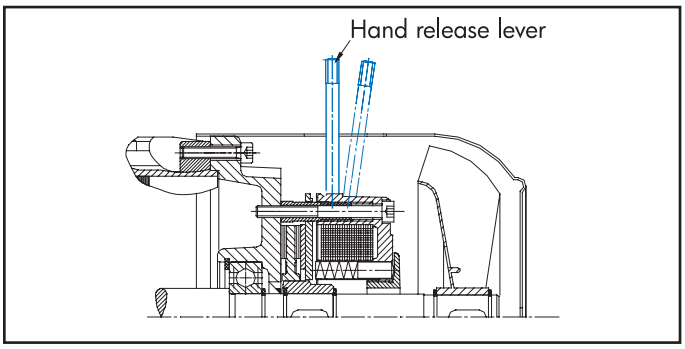
Optional Brake Accessories

NORD can supply a variety of brake options and accessories, of which some of the most common are noted below.

Hand Release Lever (HL)

The hand release lever allows the brake to be manually released without requiring that the brake be energized with voltage. The lever has a spring return that allows the brake to be hand released and returned automatically to its set position. The handle of the hand release lever can be unscrewed for easy removal.

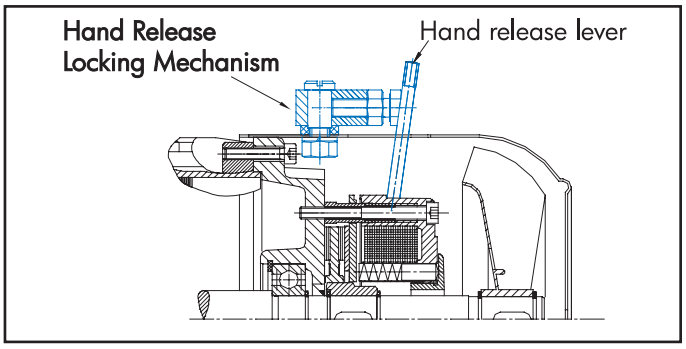
Figure 8



Locking Hand Release Lever (FHL)

This option allows the brake to be manually released and locked off without requiring voltage to the brake. The lock mechanism prevents the spring from returning the brake to a closed state without manual action by the user. The hand release lever can be unscrewed for easy removal.

Figure 9



Corrosion Protected Brake (RG)

The brake is fitted with a stainless steel brake plate to provide additional corrosion protection in severe and wet environments.

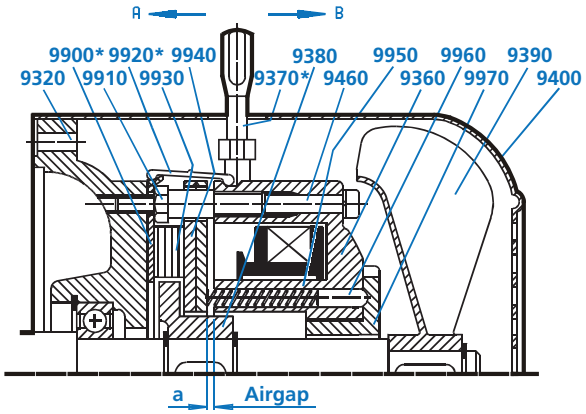
Dust & Corrosion Protected Brake (SR)

A rubber-sealing boot is installed on the brake to provide additional protection in dusty environments. This feature includes the stainless steel brake plate (RG).

IP66 Brake (IP66)

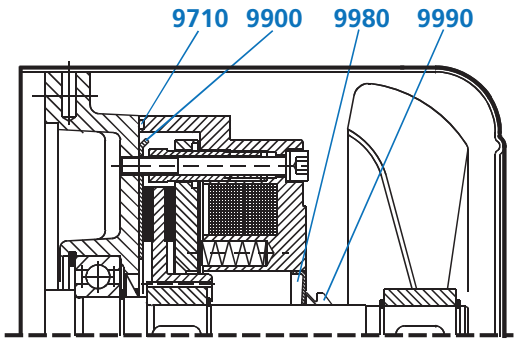
NORD can also provide an IP66 brake option designed for a bigger degree of protection against severe environments.

Parts List - Precima Brakes



Normal Design, Enclosure IP55 with following options:

RG – Stainless Steel Disc (Item 9900)
SR – Dust Boot-includes Option RG (Item 9920)
HL – Hand Release (Item 9370)



Optional Brake with optional IP66 enclosure

9320	Non-drive end shield	9710	O-ring - optional	9960	Pressure plate adjustment**
9360	Brake coil	9900	Friction plate - optional	9970	Adjustable ring **
9370	Manual brake lever – optional	9910	Setting bolt	9980	Bushing/seal - optional

IMPORTANT NOTES

- For brake coil part numbers, listed by brake size and coil voltage, please see page 4.
- The large BRE 800 and BRE 1200 twin rotor brakes are supplied to NORD pre-assembled and complete. For parts list details and spare parts information please contact NORD.

Brake Times & Electrical Selection

Brake timing performance is critical in selecting the optimal brake system. NORD brakes can provide exceptional performance in terms of the release (start) times and engagement (stop) times. Use the following guidelines in order to select the correct brake control components and connections.

1) Determine if the brake needs to be wired directly from the motor terminal block or powered by a separate power source.

- If you are using a frequency inverter, soft-start or a two speed motor you will need to supply the rectifier from a separate power source.

- If the motor is powered direct across-the-line the rectifier power can be supplied from the motor's terminal block.

2) What type of performance do I need?

- Is the standard brake performance OK?

- Is a higher performance required for fast brake release or very fast brake stopping?

3) Determine the brake supply voltage and check the rectifier compatability using the table on page 10?

Selection Suggestions

When Fast Stopping is Recommended

Any applications that require quick stops and positive action at stand-still

Recommended Applications

- conveyors and inclined conveyors
- hoists and lifts
- bulk material handling equipment (bucket elevators, idler conveyor's).

⚠ CAUTION ⚠

- **Hoisting (lifting/lowering) applications** - must have the brake wired for fast response.

When Fast-Release is Recommended (Overexcitation)

Fast Release is recommended in any application that is very high-cycling with frequent starts and stops. These applications require the brake to release very-quickly in order to avoid excessive heat build-up in the AC motor and brake coil.

Recommended Applications

- Index conveyors
- Diverters
- Storage and retrieval crane systems

Power Source	Brake Release (start)	Brake engagement (stop)	Braking Method *	Rectifier
Motor Terminal Block	Standard	Standard (AC switching)	10	GVE/GHE/GUE
	Standard	Fast (DC switching)	15	GVE/GHE/GUE
	❶ Fast (Overexcitation)	Standard (AC switching)	30	PMG 500
	❶ Fast (Overexcitation)	Fast (DC switching)	35	PMG 500
Separate Power Source	Standard	Standard (AC switching)	20	GVE/GHE/GUE
	Standard	Fast (DC switching)	25	GVE/GHE/GUE
	❶ Fast (Overexcitation)	Standard (AC switching)	45	PMG 500
	❶ Fast (Overexcitation)	Fast (DC switching)	50	PMG 500

*** Braking methods referenced in connection diagrams on pages 11-15.**

❶ Please see important note below:

IMPORTANT NOTE

The PMG500 rectifier is required when utilizing the larger 800 Nm (590 lb-ft) - and 1200 Nm (885 lb-ft) twin-rotor brakes. In order to prevent rapid wear, NORD recommends using the PMG500 rectifier to "overexcite" the brake during its release. The brake coil should be sized utilizing the PMG rectifier like a half-wave rectifier.

The table below determines the rectifier and DC brake voltage required, based on the AC supply voltage & braking method.

Rectifier Supply Voltage (VAC)	Brake Coil Voltage (VDC)	Braking Method	Rectifier Type	Rectifier P/N	BRE 5	BRE 10	BRE 20	BRE 40	BRE 60	BRE 100	BRE 150	BRE 250	BRE 400	BRE 800	BRE 1200

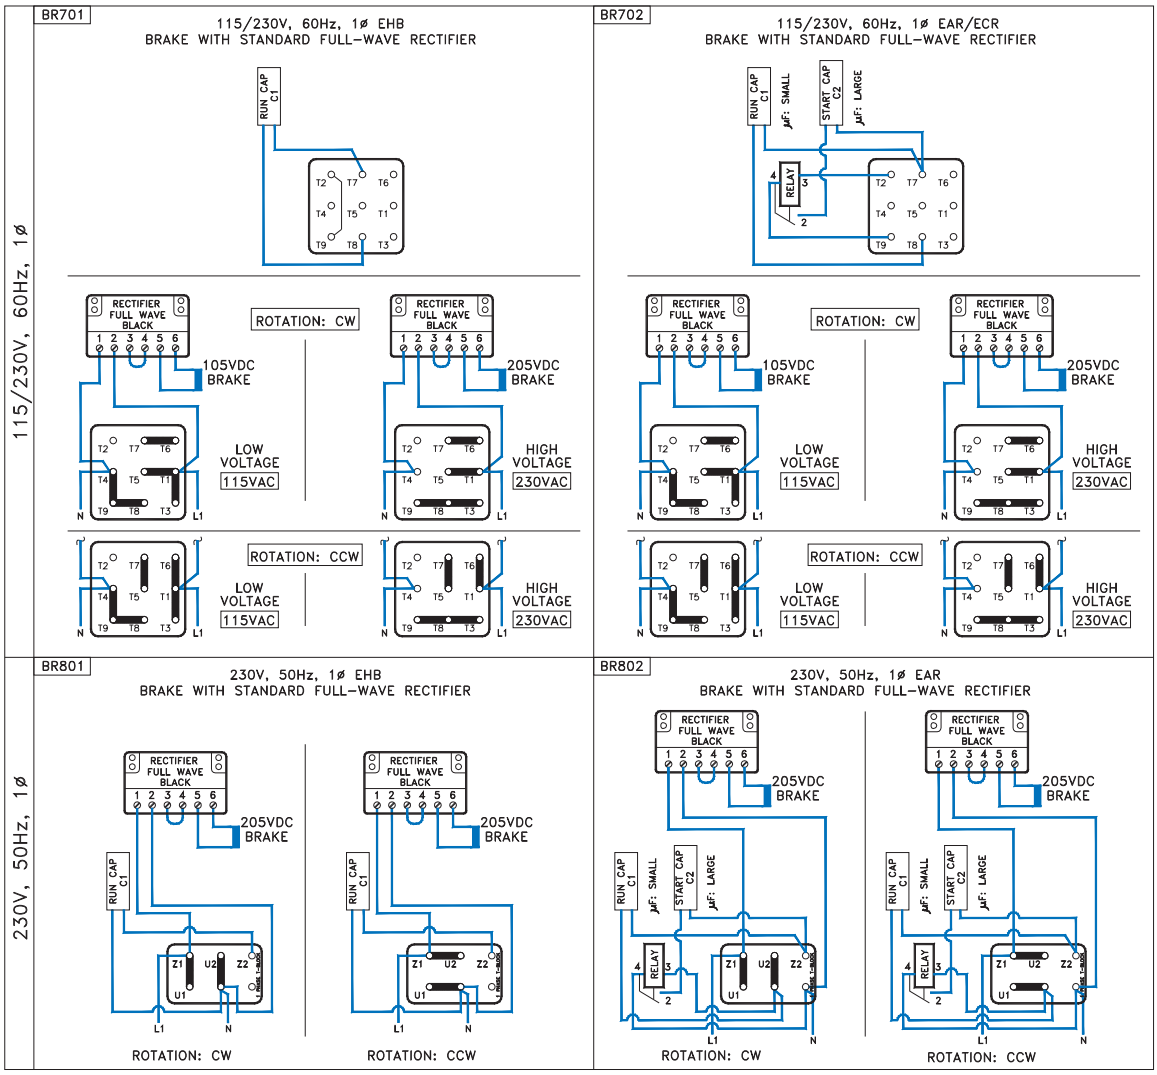
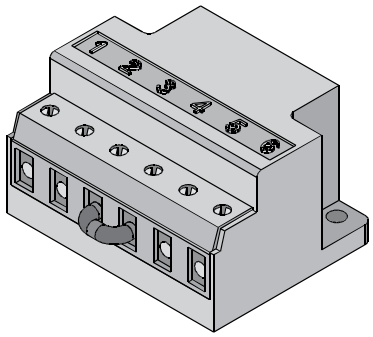
Typical Connection Diagrams - Single Phase Motors



Troubleshooting Information

Troubleshooting	Cause	Remedy
Brake doesn't release	Air gap too large	Check air gap and adjust
	Brake not recieving electrical power	Check electrical connection
	Failed rectifier	Replace rectifier
	Brake is getting too warm	Use fast response (FR) rectifier
	Voltage to brake coil too small	Check connection voltageof brake coil
	Rectifier supply voltage from inverter	Rectifier voltage must be from seperate source. (Inverter output voltage varies)
Brake release is delayed	Air gap too large	Check air gap and adjust
	Voltage to brake coil too small	Check connection voltage of brake coil
Brake does not engage	Voltage to coil too large	Check connection voltages of brake windings
	Hand release is adjusted incorrectly	Adjust to correct air gap
	Anchor plate mechanically blocked	Remove mechanical blockage
Brake engagement is delayed	Voltage to coil too large	Check connection voltage of brake windings
	Brake is switched to AC side	Use DC switching

FAST ACTING BRAKE RECTIFIERS (GPE, GPU & PMG)



General Instructions

This manual provides general operating instructions for the "Fast Acting Brake Rectifiers type "GPE, GPU, and PMG" that are commonly offered by NORD in addition to the standard brake control rectifiers. Please feel free to contact NORD with any questions concerning the supplied brake rectifiers and brake components.

Safety Notice

Only qualified personnel should attempt installation, operation and maintenance of NORD brakes and brake rectifiers. If you have a question about a procedure or are uncertain about any detail, seek clarification and DO NOT PROCEED.

⚠ WARNING ⚠

- This equipment contains high electrical voltage. Remove and lockout all power from the electric motor and brake before any work is completed on the brake.
- The user is responsible for conforming to all national and local electrical and safety codes. Wiring practices, proper grounding, disconnects, and over current protection, are of particular importance.
- Make certain the load is supported when servicing the brake. Removing power from the brake or removing the brake from the motor will release the load, which may cause severe injury or death.
- Failure to follow proper procedures and precautions may result in severe bodily injury or death.

Brake Control Rectifiers

NORD brake control rectifiers convert AC voltage to DC voltage. Rectifiers are used because most applications require AC voltage to power the motor, but DC power is required to power the brake and DC power is not typically available. NORD brakemotors typically include the rectifier located inside the terminal box.

Rectifier Advantages

- Individual power source for each brake.
- Compact size, mounted inside the terminal box.
- Multiple types, voltage options and release/engagement modes available.
- Mountable in a separate control cabinet.
- Integral protection against voltage spikes.

Standard Rectifier Types

Full-Wave Rectifier

A rectifier in which both the positive and negative half-cycles of the AC input signal are rectified to produce a uni-directional DC current supply to the load or the brake. The output voltage is 90% of the input voltage ($V_{DC} = 0.90 \times V_{AC}$).

Half-Wave Rectifier

A rectifier in which only alternate half-cycles of the AC input signal are rectified to produce a uni-directional DC current supply to the load or the brake. The output voltage is 45% of the input voltage ($V_{DC} = 0.45 \times V_{AC}$).

Dual-Wave Rectifier

A rectifier that can be wired as either a full-wave rectifier or a half-wave rectifier depending upon how it is connected to the AC input signal.

IMPORTANT NOTE

This manual provides general operating instructions for NORD brakes with Fast-Acting brake Rectifiers. For additional brake and brake rectifier information please reference User Manual U35000.

Fast-Acting or Push-Hybrid Rectifiers [GPE, GPU & PMG]

A push-hybrid rectifier or fast-acting brake rectifier provides an initial "push" in the form of a timed full-wave brake-release function, which is then followed by a continuous half-wave brake-holding function. There are two ways to apply these rectifiers as follows:

- "Overexcitation" of the brake coil provides faster brake release or improved cycling capacity. The DC voltage of the brake coil is determined based upon using a half-wave rectifier. The output voltage is 45% of the input voltage ($V_{DC} = 0.45 \times V_{AC}$).
- "Reducer-Power Holding" of the brake coil maintains the brake in a released state by using only 25% of the power needed for the initial brake release. This results in very fast brake stopping. The DC voltage of the brake coil is determined based upon using a full-wave rectifier. The output voltage is 90% of the input voltage. ($V_{DC} = 0.90 \times V_{AC}$).

IMPORTANT NOTE

In order to prevent rapid wear, the PMG 500 rectifier is required when utilizing the larger 800 Nm (590 lb-ft) and 1200 Nm (885 lb-ft) twin-rotor brakes. The PMG500 rectifier is wired to "overexcite" the brake during its initial release.

FAST ACTING BRAKE RECTIFIERS (GPE, GPU & PMG)

Push-Hybrid Rectifiers External DC Switching (GPE)

Like the standard NORD brake control rectifiers, NORD's fast acting brake control rectifiers convert AC voltage to DC voltage. The "Fast Acting Brake Rectifiers"are utilized to improve brake performance and are often recommended in order to provide shorter brake release times or to provide faster stopping times.

The fast acting rectifiers are a two-stage "push" design, when power is first applied these rectifiers operate like a full-wave rectifier and then after a relatively short period of time they act like a half-wave rectifier. The GPE type rectifiers start out in full-wave mode when power is first applied and then after approximately 250 ms they switch to half-wave mode.

GPE rectifiers were designed for external control of the brake's DC-switching. GPE rectifiers are primarily used in across-the-line applications where the brake power is supplied by the motor terminals but they may also be used in situations where the brake power is supplied separately to the brake rectifier.

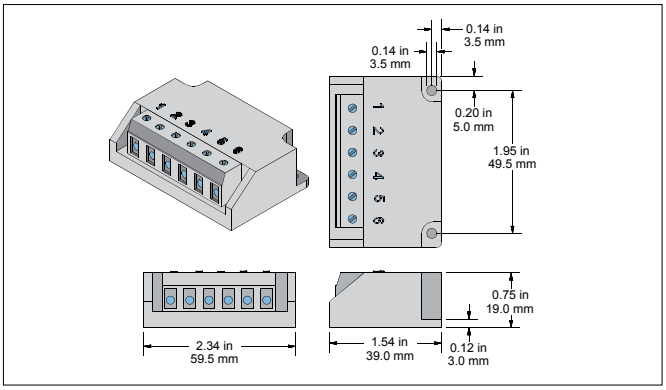
There are two ways to apply the fast acting rectifiers:

- The first method, known as "Overexcitation," provides fast brake release. The brake coil is selected like a half-wave system (45% of the AC supply voltage).
- The second method, known as "Reduced Power Holding," provides very fast brake stopping. The brake coil is selected like a full-wave system (90% of the AC supply voltage).

IMPORTANT NOTE

If the motor is connected to a frequency inverter, soft start, or is a two-speed motor, then seperate AC power must be supplied to the brake rectifier.

GPE Rectifier Dimensions



Ratings & Part Numbers

Model Type	GPE20L	GPE40L
Part Number	19140230	19140240
Protection (electronics)	Coated	Coated
Color	Black	
Input Voltage (V_{AC})	200V-275V	380V-480V
Output Voltage (V_{DC})	(V_{DC}=0.45 x V_{AC}) - As Half-Wave (V_{DC}=0.90 x V_{AC}) - As Full-Wave	
Rated Current @ 40°C	0.7 A	0.7A
Rated Current @ 75°C	0.5 A	0.5A
Temperature Range	-20°C to 75°C	
DC-Switching via	External Contact or IR Relay	

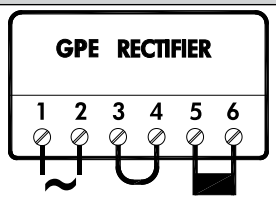
Braking Method

Braking Method	Break Release (Start)	Brake Engage (Stop)	Power Source
40	Standard	Very Fast (Reduced Power Holding)	Motor terminals
30	Fast (Overecitation)	Standard (AC Switching)	Motor terminals
35	Fast (Overecitation)	Fast (DC Switching)	Motor terminals

Basic Connection (AC & DC Switching)

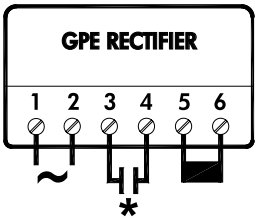
The GPE brake system can be connected for standard stopping (AC-Switching), fast stopping (DC-Switching) and very fast stopping (Reduced power holding & DC-Switching). Fast brake release can also be achieved by selecting a different brake coil combination.

STANDARD STOPPING (AC-SWITCHING)



1 & 2	3 & 4	5 & 6
AC BRAKE VOLTAGE	JUMPER	DC BRAKE

FAST & VERY FAST STOPPING (DC-SWITCHING)



1 & 2	3 & 4	5 & 6
AC BRAKE VOLTAGE	NORMALLY OPEN CONTACT	DC BRAKE

* The normally open contact/s (NO) is not supplied by NORD it must close at the same time power is supplied to the brake. The contact must be capable of switching inductive loads and/or be rated at IEC AC3.

FAST ACTING BRAKE RECTIFIERS (GPE, GPU & PMG)

Push-Hybrid Rectifiers Integrated DC Switching (GPU)

Like the standard NORD brake control rectifiers, NORD's fast acting brake control rectifiers convert AC voltage to DC voltage. The "Fast Acting Brake Rectifiers"are utilized to improve brake performance and are often recommended in order to provide shorter brake release times or to provide faster stopping times.

The fast acting rectifiers are a two-stage "push" design. When power is first applied these rectifiers operate like a full-wave rectifier and then after a relatively short period of time they act like a half-wave rectifier. The GPU rectifiers start out in full-wave mode when power is first applied and then after approximately 250 ms they switch to half-wave mode.

GPU rectifiers were designed for integrated control of the brake's DC-switching and are voltage sensing. GPU rectifiers are primarily used in applications where there is a frequency inverter, soft start, or two-speed motor. Seperate AC power must be supplied to the brake rectifier.

There are two ways to apply the fast acting rectifiers:

- The first method, known as "Overexcitation," provides fast brake release. The brake coil is selected like a half-wave system (45% of the AC supply voltage).
- The second method, known as "Reduced Power Holding," provides very fast brake stopping. The brake coil is selected like a full-wave system (90% of the AC supply voltage).

IMPORTANT NOTE

The GPU rectifier may also be utilized for across-the-line applications; however it must always be powered separate from the motor and have its own pair of contactors or starters. It is unadvisable to use the motor terminal block to supply the GPU rectifier's AC power due to the motor's slow energy dissipation when switched off.

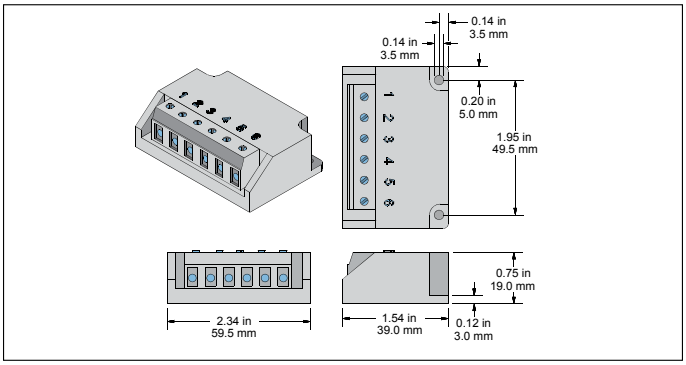
IMPORTANT NOTE

If the motor is connected to a frequency inverter, soft start, or is a two-speed motor, then seperate AC power must be supplied to the brake rectifier.

Braking Method

Braking Method	Break Release (Start)	Brake Engage (Stop)	Power Source
55	Standard	Very Fast (Reduced Power Holding)	Seperate power
45	Fast (Overecitation)	Standard (AC Switching)	Seperate power
50	Fast (Overecitation)	Fast (DC Switching)	Seperate power

GPU Rectifier Dimensions



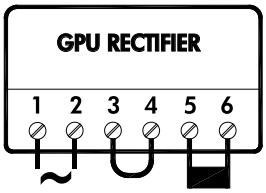
Ratings & Part Numbers

Model Type	GPU20L	GPU40L
Part Number	19140090	19140170
Protection (electronics)	Coated	Coated
Color	Black	
Input Voltage (V_{AC})	200V-275V	380V-480V
Output Voltage (V_{DC})	(V_{DC}=0.45 x V_{AC}) - As Half-Wave (V_{DC}=0.90 x V_{AC}) - As Full-Wave	
Rated Current @ 40°C	0.7A	0.7A
Rated Current @ 75°C	0.5A	0.5A
Temperature Range	-20°C to 75°C	
DC-Switching via	Internal Activation	

Basic Connection (AC & DC Switching)

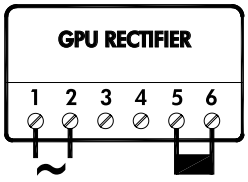
The GPU brake system can be connected for standard stopping (AC-Switching), fast stopping (DC-Switching) and very fast stopping (Reduced power holding & DC-Switching). Fast brake release can also be achieved by selecting a different brake coil combination.

STANDARD STOPPING AC-SWITCHING



1 & 2	3 & 4	5 & 6
AC BRAKE VOLTAGE	JUMPER	DC BRAKE

FAST & VERY FAST STOPPING DC-SWITCHING



1 & 2	3 & 4	5 & 6
AC BRAKE VOLTAGE	-	DC BRAKE

FAST ACTING BRAKE RECTIFIERS (GPE, GPU & PMG)

Push-Hybrid Rectifiers External DC Switching (PMG)

Like the standard NORD brake control rectifiers, NORD's fast acting brake control rectifiers convert AC voltage to DC voltage. The "Fast Acting Brake Rectifiers"are utilized to improve brake performance and are often recommended in order to provide shorter brake release times or to provide faster stopping times.

The fast acting rectifiers are a two-stage "push" design. When power is first applied these rectifiers operate like a full-wave rectifier and then after a relatively short period of time they act like a half-wave rectifier. The PMG type rectifiers start out in full-wave mode when power is first applied and then after approximately 250 ms they switch to half-wave mode.

PMG rectifiers were designed for external control of the brake's DC-switching. PMG rectifiers are primarily used in across-the-line applications where the brake power is supplied by the motor terminals, but they may also be used in situations where the brake power is supplied separately from the brake rectifier.

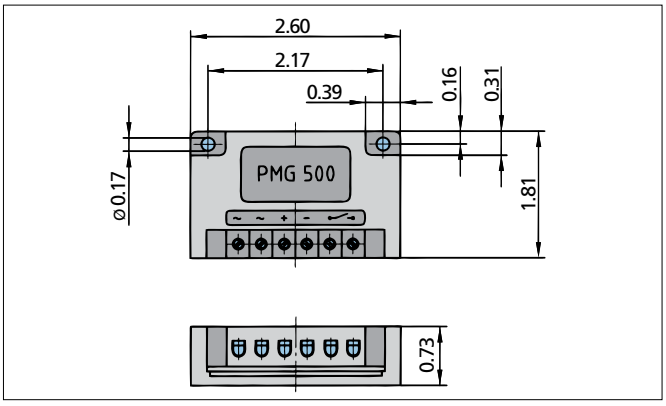
There are two ways to apply the fast acting rectifiers:

- The first method, known as "Overexcitation," provides fast brake release. The brake coil is selected like a half-wave system (45% of the AC supply voltage).
- The second method, known as "Reduced Power Holding," provides very fast brake stopping. The brake coil is selected like a full-wave system (90% of the AC supply voltage).

IMPORTANT NOTE

If the motor is connected to a frequency inverter, soft start, or is a two-speed motor, then seperate AC power must be supplied to the brake rectifier.

PMG Rectifier Dimensions



Ratings & Part Numbers

Model Type	PMG 500
Part Number	19140200
Protection (electronics)	Coated
Color	Black
Input Voltage (V_{AC})	200-500V_{AC} +/- 10%
Output Voltage (V_{DC})	(V_{DC}=0.45 x V_{AC}) - As Half-Wave (V_{DC}=0.90 x V_{AC}) - As Full-Wave
Rated Current @ 40°C	4.0 A
Rated Current @ 75°C	2.8 A
Temperature Range	-15°C to 80°C
DC-Switching via	External Contact

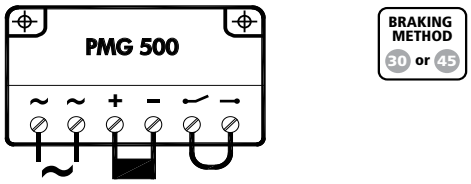
Braking Method

Braking Method	Break Release (Start)	Brake Engage (Stop)	Power Source
40	Standard	Very Fast (Reduced Power Holding)	Motor terminals
30	Fast (Overecitation)	Standard (AC Switching)	Motor terminals
35	Fast (Overecitation)	Fast (DC Switching)	Motor terminals
55	Standard	Very Fast (Reduced Power Holding)	Seperate power
45	Fast (Overecitation)	Standard (AC Switching)	Seperate power
50	Fast (Overecitation)	Fast (DC Switching)	Seperate power

Basic Connection (AC & DC Switching)

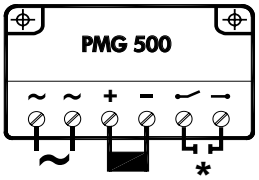
The PMG brake system can be connected for standard stopping (AC-Switching), fast stopping (DC-Switching) and very fast stopping (Reduced power holding & DC-Switching). Fast brake release can also be achieved by selecting a different brake coil combination.

STANDARD STOPPING (AC-SWITCHING)



~ & ~	+ & -	⏜ & ⊸
AC BRAKE VOLTAGE	DC BRAKE	JUMPER

FAST & VERY FAST STOPPING (DC-SWITCHING)



~ & ~	+ & -	⏜ & ⊸
AC BRAKE VOLTAGE	DC BRAKE	NORMALLY OPEN CONTACT

* The normally open contact/s (NO) is not supplied by NORD it must close at the same time power is supplied to the brake. The contact must be capable of switching inductive loads and/or be rated at IEC AC3.

Brake Times & Electrical Selection

Brake timing performance is critical in selecting the optimal brake system. NORD brakes can provide exceptional performance in terms of the release (start) times and engagement (stop) times. Use the following guidelines in order to select the correct brake control components and connections.

1) Determine if the brake needs to be wired directly from the motor terminal block or powered by a separate source.

- If you are using a frequency inverter, soft-start or a two speed motor you will need to supply the rectifier from a separate power source.

- If the motor is powered direct across-the-line the rectifier power can be supplied from the motor's terminal block.

2) What type of performance do I need?

- Is the standard brake performance OK?

- Is a higher performance required for fast brake release or very fast brake stopping?

3) Determine the brake supply voltage and check the rectifier compatability using the table on the page 6.

Selection Suggestions

When Fast or Very Fast Stopping is Recommended

Any applications that require quick stops and positive action at stand-still

Recommended Applications

- conveyors and inclined conveyors
- hoists and lifts
- bulk material handling equipment (bucket elevators, idler conveyor's).

⚠ WARNING ⚠

Hoisting (lifting/lowering) applications - must have the brake wired for fast response (DC-switching)

When Fast-Release is Recommended (Overexcitation)

Any application that is very high-cycling with frequent starts and stops. These applications require the brake to release very-quickly in order to avoid excessive heat build-up in the AC motor and brake coil.

Recommended Applications

- Index conveyors
- Diverters

Power Source	Brake Release (start)	Brake engagement (stop)	Braking Method *	Rectifier
Motor Terminal Block	Standard	Very Fast (Reduced power holding)	40	GPE or PMG 500
	Fast (Overexcitation)	Standard (AC switching)	30	GPE or PMG 500
	Fast (Overexcitation)	Fast (DC switching)	35	GPE or PMG 500
Seperate Power Source	Standard	Very Fast (Reduced power holding)	55	GPU or PMG 500
	Fast (Overexcitation)	Standard (AC switching)	45	GPU or PMG 500
	Fast (Overexcitation)	Fast (DC switching)	50	GPU or PMG 500

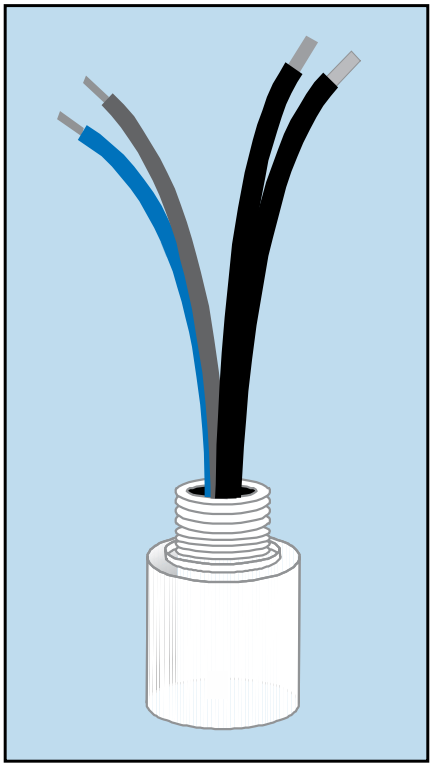
CURRENT SENSING BRAKE RELAY (IR) INSTALLATION & MAINTENANCE

Motor Current Sensing Brake Relay (IR)

The current sensing relay, normally called the IR option, is used to achieve improved brake engagement or stopping time without the use of external control equipment or additional wiring. The relay is mounted directly onto the motor terminal box. The relay switch leads are connected to terminals 3 and 4 of the rectifier. When the power to the motor is shut off, the IR relay opens the brake circuit on the DC side; this allows the brake to demagnetize quickly.



⚠ WARNING ⚠

- Motor must be powered across-the-line (not inverter powered or controlled with a soft-start)
- The brake power must be provided from the motor's terminal block (not separately powered)
- Motor must be a single-speed (not possible with two-speed motors)

Ratings

Part Number	18556010	18556020
Motor Frame Sizes	63S – 180M*	180L – 225M
Maximum Cycles per hour	500	500
Switching Voltage	42-550V_{DC}	42-550V_{DC}
AC input current – black/white wires	25 A_{AC} -75A_{AC} – 0.2 s	50 A_{AC} - 75A_{AC} – 0.2s
DC brake current – red and blue wires	1.0 A_{DC}	1.0 A_{DC}
Holding Current	0.7 A_{AC}	0.7 A_{AC}
Additional brake setting delay	18 ms	18 ms
Ambient temperature	- 25 to 90 °C - 40 to 167 °F	- 25 to 90 °C - 40 to 167 °F
Enclosure with o-ring mounted to a terminal box	IP65	IP65

* For the 180MX/4, 230/460V motor use part number 18556020

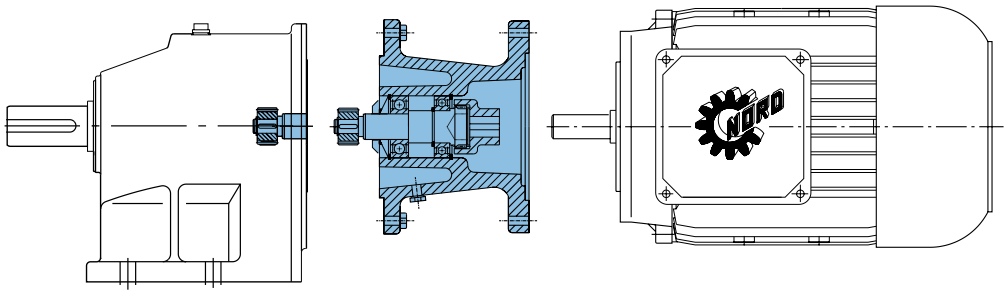
NEMA/IEC INPUT ADAPTERS & THEIR COUPLINGS



⚠ WARNING ⚠

LOCK OUT POWER before any maintenance is performed. Make absolutely sure that no voltage is applied while work is being done on the gearbox or input.

NEMA/ IEC Motor Adapters

Motor adapters allow for easy installation and removal of industry standard motors. Motor adapters consist of a coupling and an adapter housing that connects the motor to the gear reducer.

NORD Gear supplies a coupling that is to be mounted on the motor shaft. It is important that the coupling is properly positioned.

- For NEMA Input Adapters, follow the Motor Installation Instructions on pages 3-4.
- For IEC Input Adapters, the supplied coupling will mount directly against the motor shaft shoulder. No locating measurements need to be taken.

⚠ NOTE ⚠

Some of the larger IEC inputs will have a coupling spacer included to help locate the coupling. Slide the spacer against the motor shaft shoulder, slide the coupling against the spacer and tighten set screw(s).

⚠ NOTE ⚠

For the larger motor adapters (IEC160 / N250TC and larger), an Automatic Lubricator is supplied. This will need to be activated at the time of startup. For operation and activation instructions, refer to user manual U45200.

NEMA/IEC Motor Weight Limits

When mounting a motor to a NORD NEMA C-face motor adapter it is important to consider the motor's weight. Following is a table that includes the maximum motor weight the NEMA adapter can support. If the motor exceeds the listed weight is must be externally supported. When a C-face mounted motor is externally supported care must be taken to ensure that the support system does not impose additional pre-loads on the NEMA motor adapter.

NEMA Motor Weight Limit

Motor FRAME	56C	143TC	145TC	182TC	184TC	210TC
Max Weight [lb]	66	88	110	130	175	220
Motor FRAME	**250TC**	**280TC**	**324TC**	**326TC**	**365TC**	
Max Weight [lb]	440	550	770	1100	1540	

IEC Motor Weight Limit

Motor FRAME	63	71	80	90	100	112
Max Weight [lb]	55	66	88	110	130	175
Motor FRAME	**132**	**160**	**180**	**200**	**225**	**250**
Max Weight [lb]	220	440	550	770	1100	1540

Couplings

Couplings are made with tough abrasion resistant materials, which resist most chemicals and petroleum products. They are electrically isolated (prevent metal to metal contact) and require no lubrication or maintenance. Depending upon the size of the C-face input, NORD provides either a gear or a jaw type coupling.

NORD supplies three different types of couplings depending on the size of input: "J" style, "M" style and "Jaw" style coupling. Following are instructions on how to properly mount each type of coupling onto the motor.

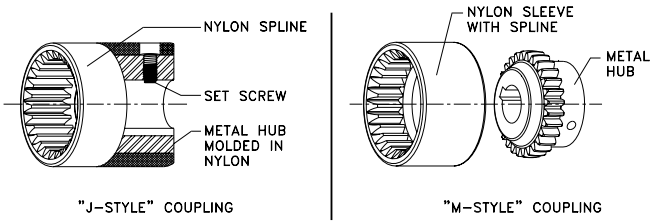
Couplings for the NEMA and IEC Adapters

Depending on the size of the input adapter to the gearbox, NORD Gear supplies two styles of couplings - BoWex® (gear tooth) and Rotex® (jaw) couplings.

BoWex® Couplings

NORD C-face adapter input shafts have a machined spline on the end. NORD incorporates two styles of BoWex® couplings, the "J" and "M" styles. The "J" style is a one-piece coupling with a metal hub and nylon spline. The "M" style is a two-piece coupling – the metal hub and a nylon sleeve. Nylon and steel components allow them to operate in high ambient temperatures without lubrication or maintenance.

- Nylon sleeves resist dirt, moisture, most chemicals and petroleum products
- No lubrication required
- Operating Conditions: -22°F - 212°F (-30°C - 100°C)
- Higher temperature coupling sleeve available up to 250°F (120°C)
- Special bore available



BoWex® Couplings Mechanical Ratings "J" Style

Coupling Type	Available Bore Sizes	Cont. / Peak Torque	Input
J14	11 mm,14 mm 5/8 in	10/20 Nm 89/117 lb-in	IEC 63, 71 NEMA 56C

Rotex® Couplings

The cast iron jaw type couplings have an integral urethane "spider" that provides smooth transmission of the motor torque. A set screw on the coupling prohibits axial movement along the motor shaft.

- Excellent shock and vibration dampening
- Excellent resistance to oils and most chemicals
- No metal-to-metal contact
- Operating Conditions: -22°F - 195°F (-30°C - 90°C)
- Higher temperature material (Hytrel) spider available up to 230°F (110°C)
- Low temperature materials available upon request
- Special bores available

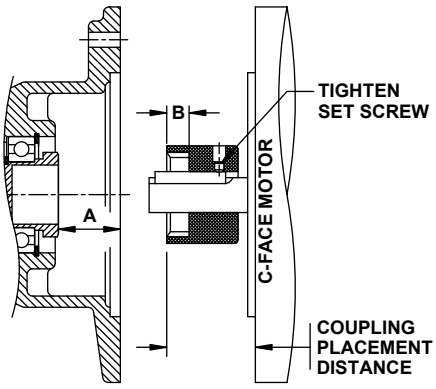
NEMA/IEC INPUT ADAPTERS & THEIR COUPLINGS

"J" Style Coupling NEMA C-face Motor Installation

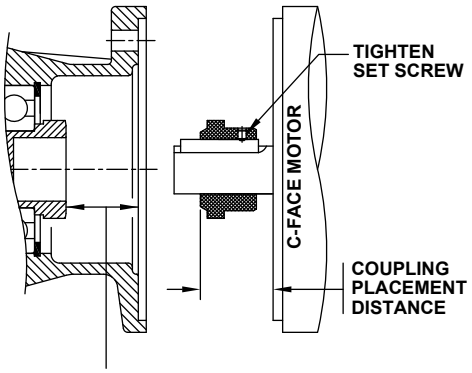
1. Measure the distance from the face of the input adapter to the face of the splined shaft and record that measurement as A in the equation below.
2. Measure depth of coupling engagement zone and record the measurement as "B" in the equation below.
3. Add "A" + "B" and subtract 0.08" (~2mm) from the distance. This needs to be done so that the coupling will not be preloaded after installation!
4. Use that measurement to locate the coupling from the face of the motor onto the shaft.
5. Once in place, tighten the set screw to lock the coupling in place. It is recommended that the key is staked or bonded (Loctite) in place to prohibit the key from vibrating out.
6. Mount the motor onto the input adapter with customer supplied bolts. Make sure that the coupling from the adapter and the motor engage securely. Use lock washers or Loctite to prohibit bolts from becoming loose from vibration.



MEASURED DISTANCES A + B		SUBTRACT DISTANCE	COUPLING PLACEMENT DISTANCE
____ +	____	- 0.080" (2mm) =	_____

"M" Style Coupling NEMA C-face Motor Installation

1 Measure the distance from the face of the input adapter to the face of the splined shaft & record that measurement.
2. Subtract 0.31" (~8mm) from the distance. This needs to be done so that the coupling will not be preloaded after installation!
3. Use that measurement to locate the coupling from the face of the motor onto the shaft.
4. Once in place, tighten the set screw to lock the coupling in place. It is recommended that the key is staked or bonded (Loctite) in place to prohibit the key from vibrating out.
5. Mount the motor onto the input adapter with customer supplied bolts. Make sure that the coupling from the adapter and the motor engage securely. Use lock washers or Loctite to prohibit bolts from becoming loose from vibration.



MEASURED DISTANCE	SUBTRACT DISTANCE	COUPLING PLACEMENT DISTANCE
_____	- 0.310" (8mm) =	_____

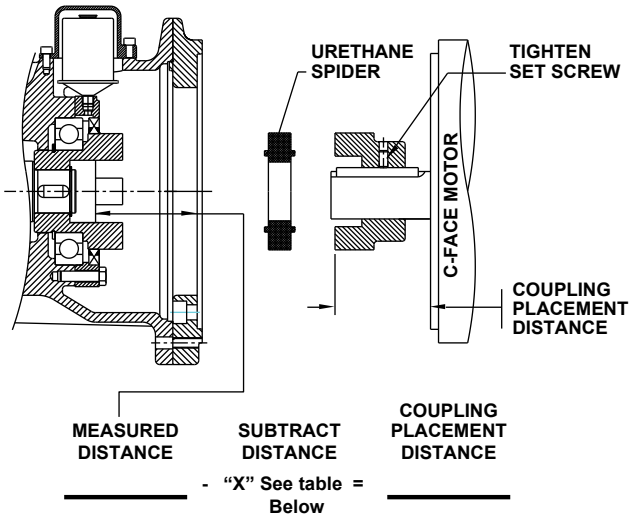
"Jaw" Style Coupling NEMA C-face Installation

1. Measure the distance from the face of the input adapter to the face of the coupling as shown and record that measurement.
2. Subtract the "X" dimension from the measured distance. This needs to be done so that the coupling will not be preloaded after installation!
3. Use that measurement to locate the coupling from the face of the motor onto the shaft.
4. The metal portion of the coupling should be heated up prior to assembly, generally 250°F to 300°F (120°C to 150°C).

⚠ WARNING ⚠

DO NOT HEAT THE URETHANE SPIDER.

5. Once in place, tighten the setscrew to lock coupling in place. Let the coupling cool down before placing the spider into the jaws. It is recommended that the key is staked or bonded (Loctite) in place to prohibit the key from vibrating out.
6. Mount the motor onto the input adapter with customer supplied bolts. Make sure that the coupling from the adapter and the motor engage securely. Use lock washers or Loctite to prohibit bolts from becoming loose from vibration.



Coupling Size	"X" (Subtract this value from measured distance)
R14	0.06" (1.5 mm)
R19 & R24	0.08" (2.0 mm)
R28	0.10" (2.5 mm)
R38 & 42	0.12" (3.0 mm)
R48	0.14" (3.5 mm)
R65	0.18" (4.5 mm)
R90	0.22" (5.5 mm)

AUTOMATIC LUBRICATOR

Automatic Lubricator

Some NORD gear units with NEMA 250TC or IEC 160 and larger input adapters, have a PERMA® Classic automatic lubricator supplied to help dispense grease to the outboard bearing.

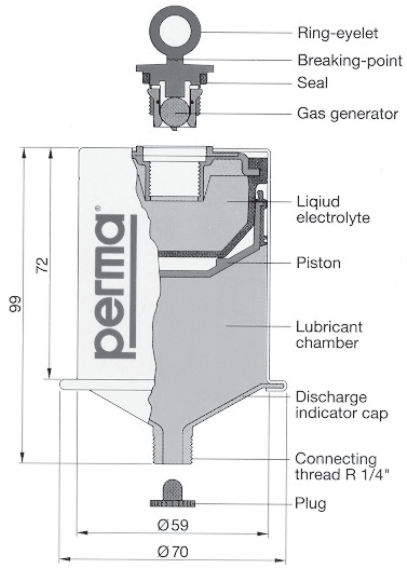
Helical Inline	SK62, SK72, SK73, SK82, SK83, SK92, SK93, SK102 and SK103
Parallel-Shaft Clincher™	SK6282, SK7282, SK7382 SK8282, SK8382, SK9282, SK9382, SK10282, SK10382, SK11282, SK11382, and SK12382
90.1 Series Helical-Bevel	SK9072.1, SK9082.1, SK9086.1, SK9092.1, and SK9096.1

Principle of Operation

The activation screw is secured into the top of the lubrication canister and tightened until the ring-eyelet reaches its breaking point. A zinc-molybdenum gas generator drops into a citric acid liquid electrolyte, that is contained within an elastic bladder. The gas generator starts an electrochemical reaction which gradually pressurizes the bladder by releasing hydrogen gas in very small amounts. The gas creates enough pressure (up to 4 bar or 58 psi) to expand the bladder and push the piston and the lubricant forward.

Lubricant is continuously injected into the lubrication point until the bearing cavity is full. Any back pressure from the bearing will cause the system to neutralize. The bladder inside the canister will continue to slowly build pressure so that once the equipment resumes normal operation, the lubricator will also resume its normal function. After 12 months of operation the PERMA® canister must be replaced.

The lubricator contains approximately 120 cm^3 or 120 ml (4.8 oz) of grease. For reference, a single stroke of a typical grease gun delivers approximately 1.0-1.2 cm^3 (0.03–0.04 oz) of grease. This means the canister contains approximately 100 strokes of grease. At the end of the lubrication period, the discharge indicator cap or piston becomes clearly visible through the clear nylon discharge indicator cap which is located at the bottom of the PERMA® canister; this helps indicate that the lubricant has been fully discharged.



HARMFUL SITUATION

- To prevent premature bearing failure, the lubrication dispenser must be activated prior to commissioning the gear reducer.
- The lubricator must only be used once and should never be opened or taken apart or permanent damage will result.
- Never unscrew the PERMA® canister from the lubrication point after activation or during the discharge period. This would cause a permanent pressure loss in the lubricator and would justify replacing the lubricator.

WARNING

- Avoid swallowing the gas generator, the liquid electrolyte, and the lubricant.
- Avoid contact of, the liquid electrolyte, and the lubricant with the eyes, skin or clothing.
- Observe all applicable MSDS sheets.
- Follow applicable local laws and regulations concerning waste disposal.

PERMA® Classic – Options Supplied by NORD

NORD Part Number	28301000	28301010
Lubrication Option	Synthetic (standard)	Food Grade (optional)
PERMA® Classic Temperature Range ♦	0 to 40 °C (32 to 104 °F)	0 to 40 °C (32 to 104 °F)
Lubrication Volume	120 cm3 or 120 ml (4.8 oz)	120 cm3 or 120 ml (4.8 oz)
Grease Lubrication Mfg. / Type	Klüber / Petamo GHY 133	Lubriplate / FGL1
Lubrication Temperature Range ♦	-30 to 120 °C (-22 to 248 °F)	-18 to 120 °C (0 to 248 °F)

♦ The temperature range values shown do not apply to other components and/or lubricants within the gear reducer.

The lubricator contents will dispense for a 12 month period when the average temperature is 20 °C (68 °F).

Temperature Influences Discharge Rate

Discharge rate is based upon an ambient temperature of 20 °C (68 °F). The gray activating screw supplied by PERMA indicates that the lubricator contents will dispense for a 12 month period when the average temperature is 20 °C (68 °F).

- Lower ambient temperatures will lead to slower dispensing rates and higher ambient temperatures will lead to faster dispensing rates.
- Dispensing rates depend primarily on average ambient conditions and not extreme highs and lows.
- Discharge can also be influenced by type of lubricant, vibration, and the connecting parts and values shown are approximate, based upon supplier testing completed.

Average Ambient Temperature	Discharge Period Months ♦
0 °C (32 °F)	>18
10 °C (50 °F)	18
20 °C (68 °F)	12
30 °C (86 °F)	6
40 °C (104 °F)	3

♦ Values are approximate.

Attention!

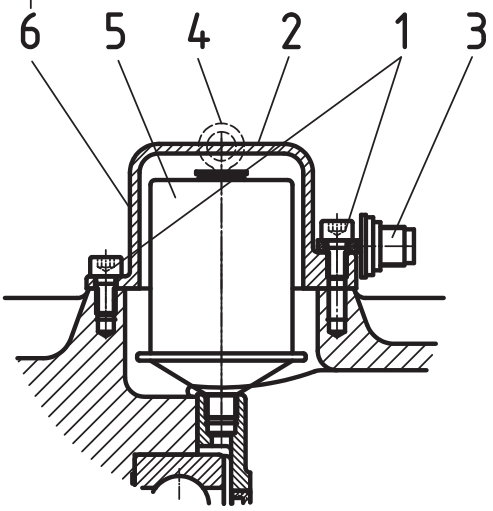
Screw in the activation screw until the lug breaks off before commissioning the gear unit.

Dispensing time: 12 Months

Activation Date

Month 1 2 3 4 5 6 7 8 9 10 11 12

Year 11 12 13 14 15



Initial Assembly Instructions

When first receiving the gear unit with motor adapter, the automatic lubricator is installed as shown in the figure below.

1. Loosen and remove the M8 x 16 socket head cap screws (1) and the protective cartridge case cover (2).
2. Insert the gray colored activation screw (3) into the lubrication dispenser (5) and tighten securely by hand.
3. Put a suitable tool through the ring-eyelet (4) and use it to turn the activator screw until the eyelet breaks off. The lubricator is now activated.
4. Refit the protective cartridge case cover (2) and tighten the M18 x 16 socket head screws.
5. Mark the activation date indicating on the reddish-orange adhesive label (6) by indicating the month and year.
6. Take note of the activation date and replace the canister again in twelve months.

Replacement Assembly Instructions

1. Loosen and remove the M8 x 16 socket head cap screws (1) and the protective cartridge case cover (2).
2. Remove the expired or old PERMA® canister from the bearing housing.
3. Remove the protective shipping plug from the thread-end of the New PERMA® canister.
4. Screw the canister into the reducer bearing housing by hand until it is snug and secure. Do not over tighten or the plastic threads on the canister can become damaged!
5. Put a suitable tool through the ring-eyelet (4) and use it to turn the activator screw until the eyelet breaks off. The lubricator is now activated.
6. Refit the protective cartridge case cover (2), tighten the M18 x 16 socket head screws (1)
7. Take note of the activation date and replace the canister again in twelve months.

NEMA OR IEC INPUT ADAPTER WITH GREASE FITTING

Application

NORD gear units listed in the table below that are supplied with a NEMA 250TC or IEC 160 and larger input adapter, may be supplied with an external grease fitting. The grease fitting allows the user to service the outboard bearing of the reducer's input assembly

Helical Inline	SK62, SK72, SK73, SK82, SK83, SK92, SK93, SK102 and SK103
Parallel-Shaft CLINCHER™	SK6282, SK7282, SK7382, SK8282, SK8382, SK9282, SK9382, SK10282, SK10382, SK11282, SK11382 & SK12382
90.1 Series Helical-Bevel	SK9072.1, SK9082.1, SK9086.1, SK9092.1 & SK9096.1

The grease fitting is an option which must be specified upon ordering, otherwise NORD will normally supply a PERMA Automatic Lubricator (See User Manual U45250).

Factory Supplied Grease

The bearing grease applied at the factory is as follows:

Brand	Mobil Polyrex EP 2
Thickener	Polyurea
NLGI Grade	2
Temperature Range	40°C to 120°C (-40°F to 250°F

IMPORTANT NOTE

It is the user's responsibility to ensure that if replacement grease is used, that it is fully compatible with the factory supplied grease.

Service Instructions

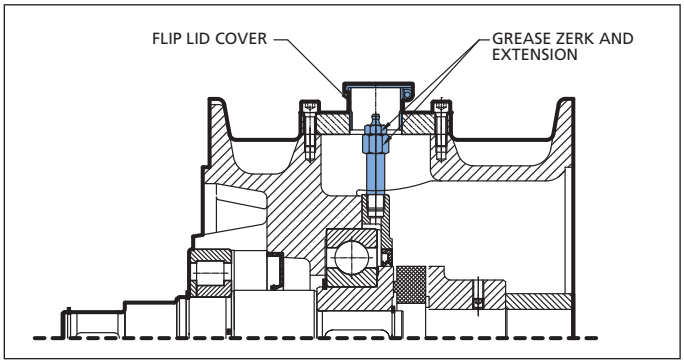
WARNING

- While working on the gear drive system, make sure the power from the prime mover is isolated or secured on "lock-out" to prevent accidental start-up and to safeguard against injury!
- Surfaces of motors and gear units may become hot during operation or shortly after start-up. In some instances additional protection against accidental contact may be necessary. Use caution to avoid burns or serious injury!

1. It is best to re-grease the bearing within a short period after the gear unit was operational because the old grease will be more viscous and will flow easier.
2. Ensure that the grease gun contains the right lubricant for the bearing to be re-greased.
3. Open the protective flip cover and clean the areas around the grease fitting to ensure that contaminants are not introduced into the bearing cavity.
4. Using a grease gun, apply 0.75 ounces (20-25 grams) of compatible bearing grease every 1,000 service hours.

IMPORTANT NOTE

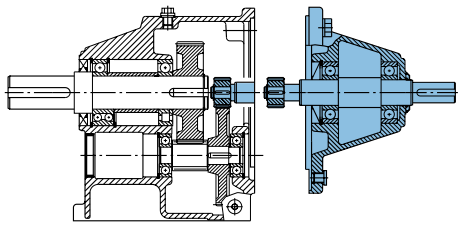
Re-greasing should be carried out while the bearing is still warm from operation and/or while rotating (if it is safe).



SOLID INPUT SHAFT (W)

1. Solid Input Shaft (W)

The shaft will be inch or metric, depending on how the unit was ordered. Measure and verify the shaft before mounting anything on the shaft. Below are the tolerances used for the solid shafts.



2. Solid shaft diameter tolerance

Reducer input shaft extensions have a diameter tolerance as specified in **Table 1**.

Table 1: Solid Shaft Diameter Tolerance

Above ø (in)	To & Including ø (in)	Tolerance (in)
0.375	1.750	+0.0000 / -0.0005
1.750	2.750	+0.0000 / -0.0010

Above ø (mm)	To & Including ø (mm)	Tolerance (mm)	ISO 286-2 Fit Class
10	18	+0.012 / +0.001	k6
18	30	+0.015 / +0.002	k6
30	50	+0.018 / +0.002	k6
50	70	+0.030 / +0.011	m6

3. Fitting drive elements onto the reducer solid shaft

Solid input shaft extensions are provided with a drill and tap feature as indicated in Table 2. When installing drive elements such as coupling hubs, pulleys, sprockets, or gears, NORD recommends using the threaded hole in the end of the shaft, along with a suitable assembly device fitted into the threaded hole.

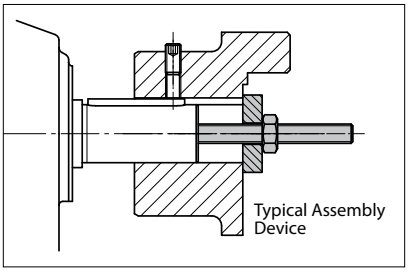


Table 2: Solid Input Shaft End - Threaded Holes

Above ø (in)	To & Including ø (in)	Tap size & Depth (in)
0.375	0.500	10-24 x 0.43 in
0.500	0.875	1/4-20 x 0.59 in
0.875	0.938	5/16-18 x 0.71 in
0.938	1.100	3/8-16 x 0.87 in
1.100	1.300	1/2-13 x 1.10 in
1.300	1.875	5/8-11 x 1.42 in
1.875	2.750	3/4-10 x 1.73 in

Above ø (mm)	To & Including ø (mm)	Tap Size & Depth (mm)
10	13	M4 x 10 mm
13	16	M5 x 12.5 mm
16	21	M6 x 16 mm
21	24	M8 x 19 mm
24	30	M10 x 22 mm
30	38	M12 x 28 mm
38	50	M16 x 36 mm
50	70	M20 x 42 mm

HARMFUL SITUATION

DO NOT DRIVE or **HAMMER** the coupling hub, pulley, sprocket, or gear into place. An endwise blow to the reducer shaft can generate damaging axial forces and cause damage to the reducer housing, bearings or internal components.

WARNING

To avoid serious injury the user must provide suitable safety guards for all rotating shafts and shaft components such as couplings, chain drives, belt drives, etc. All guarding must adhere to local regulations and safety standards.

4. Installing interference-fit hubs to the reducer shaft

Prior to installing any interference-fit hubs to the reducer shaft, consult with the manufacturer to determine proper assembly and fit. Interference-fits usually require heating the coupling, sprocket or gear hub, per the manufacturer's recommendations. Coupling hub installation typically follows ANSI/AGMA 9002-A86. Always make sure the reducer shaft seals are protected from the heat source. Apply uniform heat to the drive element hub to prevent distortion. NORD does not recommend heating the drive element hub beyond 212°F to 275°F (100°C to 135° C).

WARNING

When using heat to mount a drive element hub, do not use open flame in a combustible atmosphere or near flammable materials. Use suitable protection to avoid burns or serious injury.

HARMFUL SITUATION

When using external chain or belt drives, make sure the reducer is sized so that the shaft and bearings have adequate capacity. To avoid unnecessary bearing loads and additional shaft deflection, mount all power take-off devices (sprockets, pulleys, etc.) so that the applied load center is as close to the gear housing as possible and check component alignment and tension of any belts or chains per the manufacturer's recommendation. Do not over tighten the belts or chains.

5. Coupling installation

The performance and life of any coupling depends upon how well it is installed. Coupling hubs are typically mounted flush with the shaft ends, unless specifically ordered for overhung mounting. Shaft couplings should be installed according to the coupling manufacturer's recommendations for gap, angular and parallel alignment. To help obtain critical shaft alignment coupling hubs may be installed to the machine shafts prior to final shimming or tightening of the foundation bolts. Proper coupling alignment allows for thermal and mechanical shaft movement during operation and ensures that only torque (no radial load) is transmitted between the mating shafts.

Coupling gap and angular alignment

The shaft gap must be sufficient to accommodate any anticipated thermal or mechanical axial movement. When setting the coupling gap, insert a spacer or shim stock equal to the required spacing or gap between the coupling hub faces. Measure the clearance using feeler gauges at 90-degree intervals, to verify the angular alignment.

Parallel (or offset) alignment

Mount a dial indicator to one coupling hub, and rotate this hub, sweeping the outside diameter of the other hub. The parallel or offset misalignment is equal to one-half of the total indicator reading. Another method is to rest a straight edge squarely on the outside diameter of the hubs at 90° intervals and measure any gaps with feeler gauges. The maximum gap measurement is the parallel or offset misalignment.

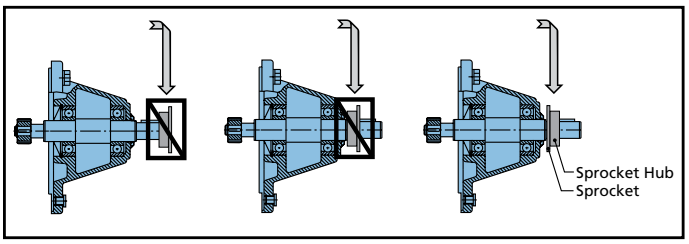
Check alignment

After both angular and parallel alignments are within specified limits, tighten all foundation bolts securely and re-check critical alignment. If any of the specified limits for alignment are exceeded, realign the coupling.

6. Installing sheaves (pulleys), sprockets and gears

To avoid unnecessary bearing loads and additional shaft deflection, mount all power take-off devices (sprockets, pulleys, gears, etc.) so that the applied load center is as close to the gear housing as possible, as shown in **Figure 2**.

Figure 2: Pully or Sprocket Mounting



Align the driver sheave or sprocket with the driven sheave or sprocket by placing a straight-edge length-wise across the face of the sheaves or sprockets. Alignment of bushed sheaves and sprockets should be checked only after bushings have been tightened. Check horizontal shaft alignment by placing one leg of a square or a level vertically against the face of the sheave or sprocket.

Always check component alignment and tension any belts or chains per the manufacturer's recommendation. The ideal belt or chain tension allows proper wrap of the driver and driven wheels, while maintaining the lowest possible tension of the belts or chain, so that no slipping occurs under load conditions. Check belt or chain tension frequently over the first 24 to 48 hours of operation.

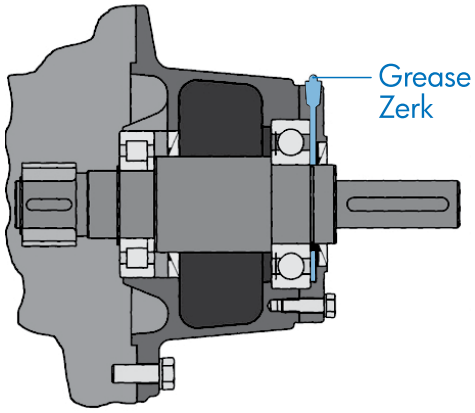
HARMFUL SITUATION

When using external chain or belt drives, make sure the reducer is sized so that the shaft and bearings have adequate capacity. To avoid unnecessary bearing loads and additional shaft deflection, mount all power take-off devices (sprockets, pulleys, etc.) so that the applied load center is as close the gear housing as possible and check component alignment and tension of any belts or chains per the manufacturer's recommendation. Do not over tension the belts or chains.

7. Service Guidelines for W-Shaft Input with Grease Fitting

On some solid shaft input (Type W) gear units, the outer roller bearing needs to be re-greased at regular service intervals. This is necessary for double-stage gearboxes sizes SK62 or SK6282 and larger, and triple-stage gearboxes from size SK73, SK7382 or SK9072.1 and larger.

To lubricate the bearing of the input shaft, approximately 0.75 to 1.0 ounces (20-25 grams) grease should be added by the grease fitting approximately after every 2,500 hours of service or at least every 6 months. The W-shaft input is factory assembled with the proper amount and type of grease. The type of grease supplied depends upon the type of oil specified at time of order.



Reducer Oil Type	Grease Type/Thickener	NLGI Grade	Ambient Temperature Range	Manufacturer Brand/Type
Mineral	Standard (Li-Complex)	NLGI 2	-30 to 60°C (-22 to 140°F)	Mobil Grease XHP222
Synthetic	High Temp (Polyurea)	NLGI 2	-40 to 80°C (-40 to 176°F)	Mobil / Polyrex EP 2
Food-Grade	Food-Grade (Polyurea)	NLGI 2	-30 to 40°C (-22 to 104°F)	Mobil SHC Polyrex 222

HARMFUL SITUATION

Grease compatibility depends upon the type of thickener or soap complex used, the base oil type suspended within the thickener, and the type of additives used. The user should check with the lubrication supplier before making substitutions in brand and type in order to assure compatibility and to avoid causing damage to the extended bearing.

MOTOR MOUNT PLATFORM (MK)

Motor Mount Platform (MK)

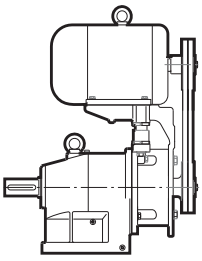
For proper installation of the belt drive, consult the manufacturer. NORD MK motor mounts are adjustable in two ways. Slotted holes are provided at the input cylinder for the initial height adjustment. There are two fine adjustments at the yoke to increase/decrease tension. Two spanner head wrenches will be needed to tighten/loosen the fine adjustments. The four bolts holding the motor platform to the input cylinder must be loosened in order to use the fine adjustments.

The motor mounting platform has tapped holes to accept the foot pattern of the standard footed NEMA or IEC motor. All MK mounting input shaft diameters are metric.

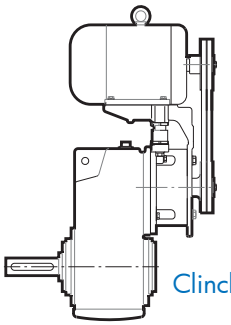
Align the sheaves or sprockets square and parallel by placing a straight edge across their faces. Alignment of bushed sheaves and sprockets should be checked after bushings have been tightened. Check horizontal shaft alignment by placing a level vertically against the face of the sheave or sprocket. Adjust belt or chain tension per the manufacturer's specified procedure. After a period of operation, recheck alignment and adjust as required.

HARMFUL SITUATION

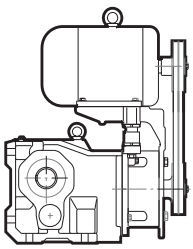
When using external chain or belt drives, make sure the reducer is sized so that the shaft and bearings have adequate capacity. To avoid unnecessary bearing loads and additional shaft deflection, mount all power take-off devices (sprockets, pulleys, etc.) so that the applied load center is as close to the gear housing as possible and check component alignment and tension of any belts or chains per the manufacturer's recommendation. Do not over tighten the belts or chains.



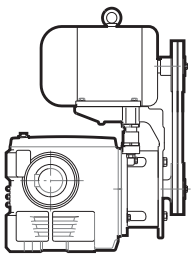
In-Line Unit



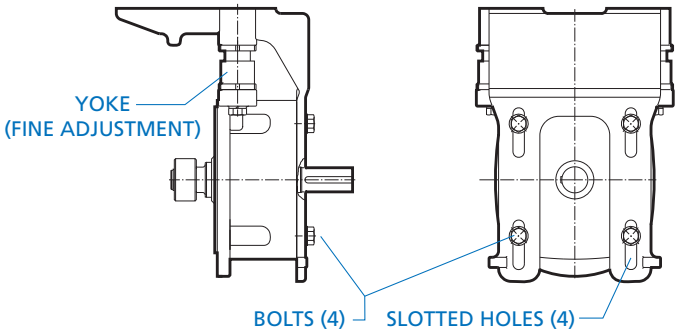
Clincher™ Unit



Bevel Unit



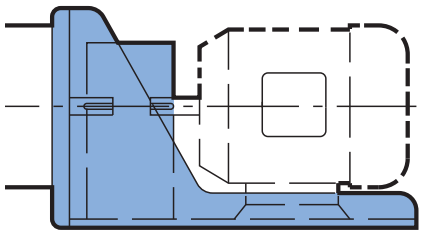
Worm Unit



WARNING

NORD Gear does not furnish the safety guards for the belt drive. It is the responsibility of the customer to install a safety guard to conform to OSHA standards.

Sugar Scoop



Each scoop bracket includes the coupling for the motor and the coupling guard.

- NORD's standard supplied coupling is the jaw-type coupling with elastomeric spider element.
- The reducer-side (driven) coupling hub is mounted by NORD.
- The motor-side (driver) coupling hub must be mounted by the party responsible for supplying or mounting the motor.
- The supplied coupling guard must be mounted after coupling installation.

Coupling Mounting Instructions

1. Make sure that the motor shaft is clean and free of burrs or defects.
2. Check the motor shaft, coupling hub bores, key and key seat dimensions to make sure they are the proper dimensions.
3. Mount the coupling onto the motor by placing the coupling so that the inside face is flush with the end of the motor shaft and tightening the set screws to hold it in place (Figure 1).

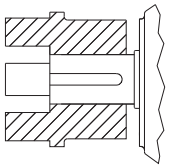


Figure 1. Place coupling flush with end of motor shaft and tighten setscrew.

IMPORTANT NOTE

Heating the coupling hub slightly, up to 176°F (80°C) will help facilitate installation onto the motor shaft.

WARNING

Wear appropriate safety gloves to handle the heated coupling hubs to avoid serious burns or injury.

HARMFUL SITUATION

DO NOT DRIVE or HAMMER coupling hubs into place. An endwise blow to the reducer or motor shaft can generate damaging axial forces and cause damage to the reducer or motor housing, bearings, or internal components.

4. Let the coupling cool down before mounting the spider into the jaws. The spider should not be under axial compression when installed.
5. Place the motor onto the scoop and engage the couplings together. The scoop has slotted holes to help accommodate axial alignment. Secure the motor to the scoop bracket but do not completely tighten the fasteners.

IMPORTANT NOTE

Before tightening the motor to the scoop bracket, the alignment of the coupling must be checked. Shimming of the motor feet may be needed to properly align the couplings. Careful coupling alignment extends the life of not only the coupling but all the components of the drive train.

6. Check the parallel alignment by placing a straight edge or level across the two coupling hubs, and measure the maximum offset at various points around the circumference of the coupling, without rotating the coupling. The maximum parallel alignment should not exceed 0.015 inches (4 mm).
7. Check the angular alignment of the coupling without rotating the hubs. The maximum angular displacement should not exceed 1.0°.
8. After both angular and parallel alignment is within specified limits, tighten all motor mounting hardware to the appropriate torque specification.
9. Re-check the critical alignment and repeat steps 6 and 7 if needed.
10. Mount the coupling guard to the scoop.

WARNING

It is the customer responsibility to properly guard the rotating shaft and coupling connection and make sure the system meets all local safety regulations.

IMPORTANT NOTE

After a period of operation, it is suggested that the system be checked to make sure coupling alignment is being maintained.

nsd tupH TOUCH-UP KIT

Items included in the touch-up kit

I. No Rinse Alodine® Touch-N-Prep pen.

II. Color matched sealer pen

⚠ WARNING ⚠

- Always wear Personal Protective Equipment (PPE), including gloves and safety glasses with side shields.
- When opening individual pens, pull safety caps straight out from pen. Do not twist or torque the cap to avoid damaging the applicator assembly.
- Do not use fingers to prime the applicator tip. Priming takes 15-30 seconds.
- Make sure the surface is clean and dry.

IMPORTANT NOTE

I. Metal temperature must be above 50° F

II. Do not excessively use abrasive pad while removing surface oxidation. Oxidation only needs to be removed from areas with exposed aluminum.

III. Use enough product to wet surface but avoid pooling.

IV. Do not rinse or wipe Alodine coating before the product is allowed to dry.

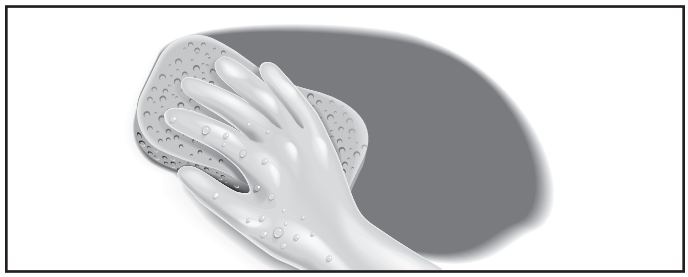
V. Allow to air dry or use a blow dryer. Do not use a heat gun. Maximum drying temperature is 140°F.

VI. Dry color will appear opaque.

Part I: Allodine® 871 Touch-N-Prep® Pen Instructions

Touch-N-Prep® pens are designed for easy and safe repair of clean, bare, or previously painted aluminum surfaces. It is a non-rinse, dry-in-place application that can be applied using the following steps:

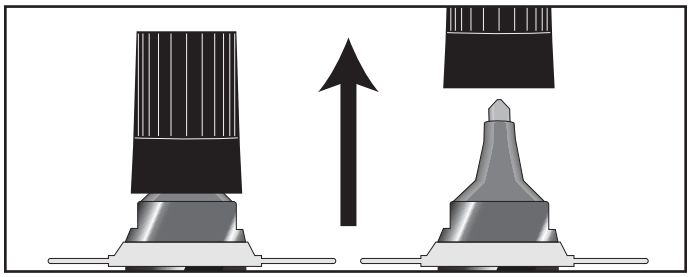
1. Surface Preperation



Before applying the coating, the treated surface must be cleaned using the following process:

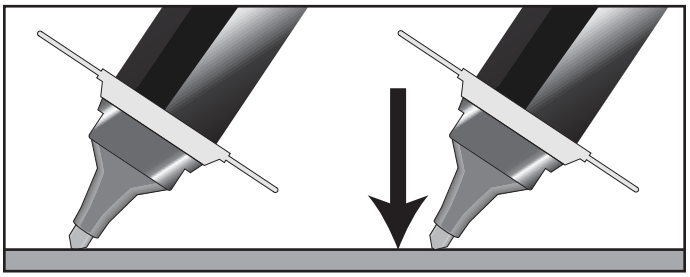
- If the scratch is more than 24 hours old use a moistened abrasive pad to remove oxides from the surface of the metal.
- Wipe substrate with a damp lint-free cloth to ensure complete removal of soils and dislodged oxides generated from the previous step.
- Allow Surface to dry before Touch-N-Prep® application.

2. Prime Applicator Tip

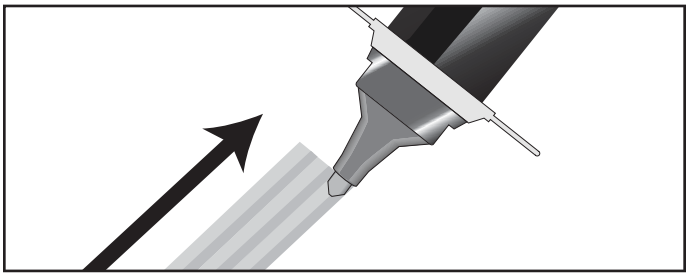


To activate, hold the Touch-N-Prep® pen upright and pop off the cap. Do not twist or turn to remove the cap, since this may result in the pen leaking. Hold the pen tip down onto a clean surface to begin the flow of solution to the tip.

3. Application

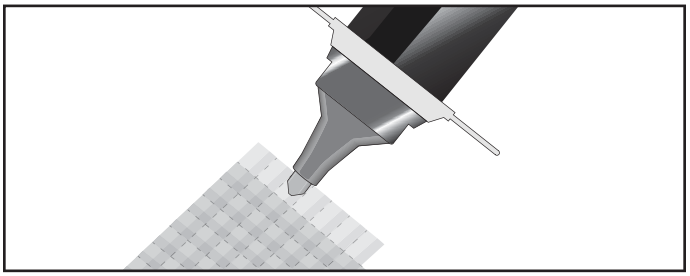


Press the pen tip down on the surface until solution fills the pen tip. Apply the Alodine® 871™ solution to the metal surface with firm, smooth, even strokes, covering all of the edges. Overlap each stroke and allow to dry.



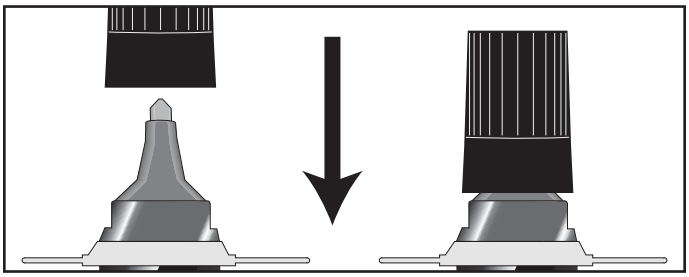
Frequent short jabs to re wet the application rip are preferred to maintain constant coating weights and avoid over-wetting the felt tip.

4. Re-Application



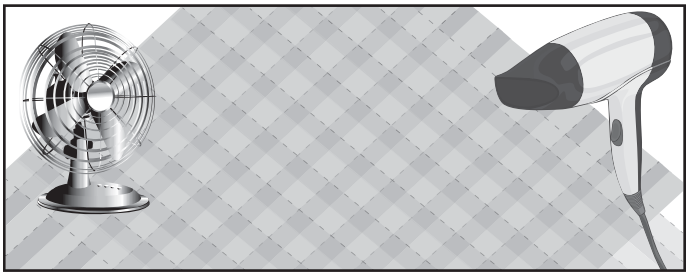
Within 5 minutes of the first coat, apply a second coat at a 90° angle to the first coat with the same smooth, firm stroke.

5. Prepare the Pen for Storage



Always immediately replace the cap when not in use to avoid evaporation and contamination.

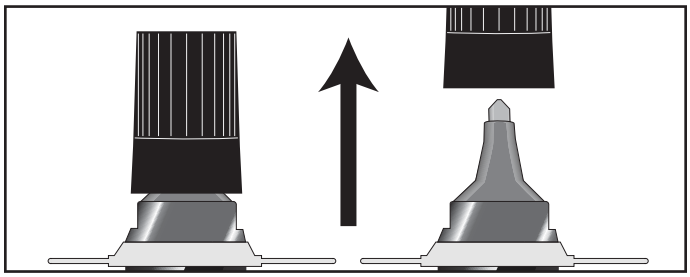
6. Drying



Allow the Alodine Touch-N-Prep® coating to air dry thoroughly.

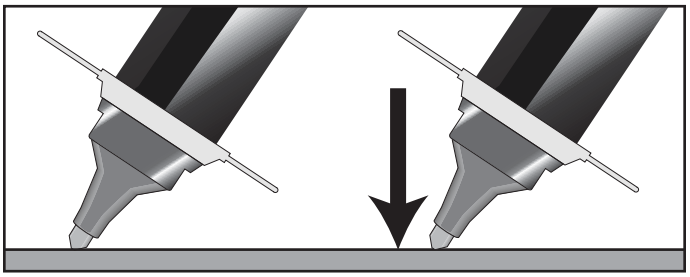
Part II: Sealer Application

1. Prime Applicator Tip



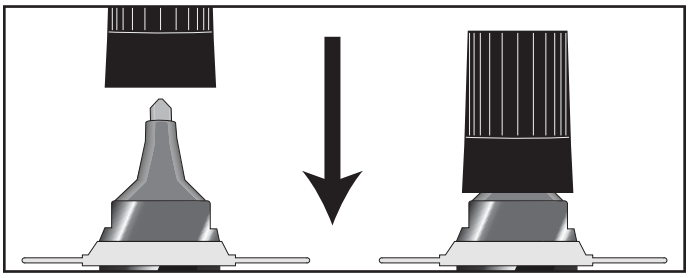
To activate, hold the pen upright and pop off the cap. Do not twist or turn to remove the cap, since this may result in the pen leaking. Hold the pen tip down onto a clean surface to begin the flow of solution to the tip.

2. Application



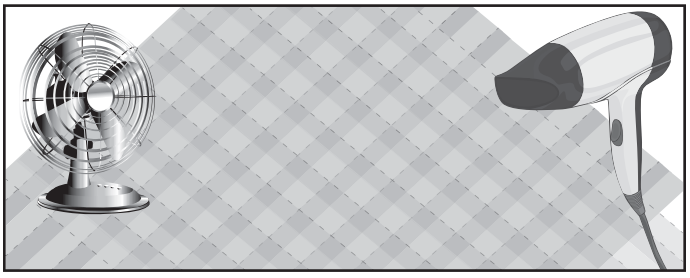
Press the pen tip down on the surface until solution fills the pen tip. Apply the sealer pen solution to the metal surface with firm, smooth, even strokes, covering all of the edges. Overlap each stroke and allow to dry.

3. Prepare the Pen for Storage



Always immediately replace the cap when not in use to avoid evaporation and contamination.

4. Drying



Allow the sealer pen coating to air dry thoroughly.

1. CONTRACT

Any contract between Nord Gear Corporation, hereinafter designated as Seller, and the Buyer is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller. Accordingly, the Buyer and Seller acknowledge and agree that the terms and conditions set forth below and on the face hereof shall govern Buyer's purchase of the goods described on the face hereof and shall take precedence over and represents the final agreement between Buyer and Seller, notwithstanding any inconsistent, contradictory or other prior or further conditions contained in any oral or written request or purchase order issued by Buyer or any other document furnished by Buyer in connection with its purchase of the Goods, regardless of whether such document or documents are exchanged simultaneously with this Invoice or prior or subsequent thereto. Any additional or different terms or conditions which may appear in any communicaiton, oral or written, from Seller, its officers, employees, agents or representatives, are hereby expressly rejected and shall not be effective or binding upon the Seller, unless specifically hereafter agreed to in writing by Seller and no such additional or different terms or conditions in any document submitted to Seller by Buyer shall become part of the contract between Buyer and Seller, unless such written acceptance by Seller specifically recognizes and assents to their inclusion. Any objection by Buyer to the terms and conditions hereof shall be ineffective unless Seller is advised in writing thereof within two (2) days of the date of this Invoice.

2. CONFIRMATION

An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Corporation's home office in Waunakee, Wisconsin, and upon such confirmation the order shall become a contract binding upon the parties hereto, their successors and assigns.

3. PRICES

Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Waunakee, Wisconsin. Prices and discounts are subject to change without notice until order is accepted. Seller's prices do not include cost of any inspection permits required.

4. LIMITED WARRANTY

Seller hereby warrants that the goods sold hereunder shall be free from material defects in material and workmanship, if properly installed and used under normal operating conditions, for a period of twelve (12) months from the date of installation or eighteen (18) months from date of shipment, whichever comes first (the "Warranty Period"). With respect to gears and housings only, the Warranty Period is extended to thirty-six (36) months from the date of invoice or twenty-four (24) months from the date of installation, whichever comes first. The limited warranty shall not apply to any components or parts which are subject to normal operational wear and tear, including, but not limited to, belts and traction discs. Should any goods fail to comply with the foregoing limited warranty, Buyer shall provide written notice to Seller of the claimed defect and all relevant details within thirty (30) days of Buyer's discovery of the claimed defect. Buyer shall return the allegedly defective goods to Seller at its facilities in Waunakee, Wisconsin or to such other location within the USA as may be designated by Seller in its sole discretion, with all shipping and transportation charges prepaid by Buyer. Seller shall then examine the returned goods to determine if the claimed defect is covered by the limited warranty. If the claimed defect is covered by the limited warranty, Buyer's sole and exclusive remedy shall be to have Seller repair or replace, at Seller's option, the defective goods or components in accordance with the terms of this limited warranty. Seller shall have a commercially reasonable time to make such repairs or replacements and may use new or reconditioned components. Any repair or replacement shall not extend the Warranty Period unless otherwise agreed by Seller. Buyer shall pay all shipping costs and any costs of removal and re-installation of goods or components.

The foregoing limited warranty shall not apply with respect to any goods or components (i) which are not installed, used, operated, serviced or maintained in accordance with manufacturer's instructions or which are otherwise not properly installed, used, operated, serviced or maintained, or (ii) which are misused, neglected, damaged, altered, repaired, reconfigured or incorrectly wired. Seller makes no representations as to the specifications, capacity or performance of the goods sold hereunder, except as may be specifically set forth in the invoice's written specifications, and any such representations are expressly conditioned upon the accuracy and completeness of the data and information furnished by the buyer and upon the goods being properly installed, used, serviced and maintained by Buyer. Any description or model of the goods is for identification or illustrative purposes only and shall not be deemed to create any warranty, express or implied.

THE FOREGOING LIMITED WARRANTY SHALL EXTEND SOLELY TO BUYER AND NOT TO ANY OTHER PARTY. THE FOREGOING LIMITED WARRANTY IS IN LIEU OF ANY AND ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED. SELLER HEREBY EXCLUDES AND DISCLAIMS ANY AND ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IF BUYER SHALL FAIL TO PAY WHEN DUE ANY PORTION OF THE PURCHASE PRICE OR ANY OTHER PAYMENT REQUIRED FROM BUYER TO SELLER UNDER THIS CONTRACT, ALL WARRANTIES AND REMEDIES SET FORTH HEREIN SHALL BE DEEMED NULL AND VOID, AB INITIO. THE PARTIES ACKNOWLEDGE AND AGREE THAT THE EXCLUSIVE REMEDY UNDER THE FOREGOING LIMITED WARRANTY SHALL NOT HAVE FAILED OF ITS ESSENTIAL PURPOSE (AS THAT TERM IS USED IN THE UNIFORM COMMERCIAL CODE) PROVIDED THAT SELLER REMAINS WILLING TO REPAIR OR REPLACE DEFECTIVE GOODS WITHIN A COMMERCIALLY REASONABLE TIME. BUYER SPECIFICALLY ACKNOWLEDGES AND AGREES THAT THE PRICE CHARGED BY SELLER FOR THE GOODS IS BASED UPON THE LIMITATIONS OF SELLER'S WARRANTY OBLIGATIONS AND OTHER LIABILITIES AS SET FORTH HEREIN.

LIMITATION OF LIABILITY. NOTWITHSTANDING ANY OTHER PROVISION HEREOF, IN NO EVENT SHALL SELLER BE LIABLE TO BUYER OR TO ANY OTHER PARTY FOR ANY INCIDENTAL, SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES, LOST PROFITS, OR FOR ANY LOSSES, CLAIMS OR DAMAGES RELATING TO OR ARISING FROM THE USE OR OPERATION OF THE GOODS, AND IN NO EVENT SHALL ANY CLAIM OR RECOVERY OF ANY KIND EXCEED THE PURCHASE PRICE OF THE GOODS IDENTIFIED IN THE RELATED INVOICE.

5. SHORTAGE AND NONCONFORMITY

Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. Buyer may not return any goods claimed to be in non-conformity without Seller's prior written authorization. Goods returned without permission will not be accepted, including for credit, and will be returned to Buyer, F.O.B. Sellter's plant. Any claim based on the receipt of damaged Goods must be filed with the carrier which delivered the goods. The samples, measurements, dimensions and weights contained in the Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. The Seller reserves the right to make any change which the Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications or standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries, In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, the Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the case may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business or good will. The liability of the Seller to Buyer, if any hereunder, for breach of warranty, contract, negligence or otherwise, shall in no event exceed the amount of the purchase price of the goods sold with respect to which any damages are claimed. Shipping dates are estimates unless parties expressly agree on time of the essence.

6. FORCE MAJEURE

The obligation of the Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock-outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other cause beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order or contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

7. SHIPMENT AS UNIT

Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by the Buyer: provided, however, that if the Buyer defaults in the payment of any obligation to Seller or any installments thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, the Seller may, on fifteen (15) days written notice to the Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or treat the entire contract or contracts with Buyer as breached by the Buyer and pursue its remedies for breach.

8. BUYER'S REFUSAL OF DELIVERY

If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchases at public or private sale, and hold the Buyer liable for any difference between (a) the contract price of the goods, and (b) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

9. GOODS IN TRANSIT

If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for a state court receivership is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to the Buyer, provided that if Buyer is then indebted to Seller, the amount of any such damage claim shall be abated to the extent that the indebtedness of Buyer to Seller, as actually paid in money, is abated by any order of judgement entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice the Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganizing or if a state court receivership is filed against Buyer, then, at its option Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

10. DELIVERY

(a) Any indicated dates of delivery are approximate only, but NORD Gear will attempt to meet them whenever possible. (b) NORD Gear will not be liable for any penalty clausess contained in any specifications or order submitted unless agreed to in writing by an authorized officer of NORD Gear Corporation. (c) Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to the Buyer, and thereafter the risk of loss or damage to the goods shall be upon the Buyer. (d) If the Buyer does not give delivery instructions to the Seller at least (10) days prior to the delivery date ex factory confirmed by the Seller, the Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option, may store the goods on the pier or any warehouse, at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

11. PAYMENT OF PURCHASE PRICE

Time of payment is of the essence under the contract. Unless otherwise provided, terms of payment are 30 days net from the date of invoice with a 1% discount if paid within 10 days of date of invoice. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if the Buyer becomes bankrupt or insolvent, or any petition for reorganization or for a state court receivership is filed against Buyer, or if the Buyer makes any assignment for the benefit of it's creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason the Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of the Seller.

12. BUYER'S DEFAULT

Upon the Buyer's default, the Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. The Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods, reasonable attorney's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to the Buyer. If a deficiency results after the resale, the Buyer agrees to pay such forthwith, together with reasonable attorney's fees, for the recovery of the goods incurred by the Seller. If upon the Buyer's default, the Seller elects not to resell any goods which it may repossess, then the cost of repossession, including reasonable attorney's fees, shall forthwith be due and payable from Buyer to Seller. Buyer agrees to pay all reasonable costs and reasonable attorneys' fees incurred by Seller in enforcing Seller's rights against Buyer, including Seller's right to payment of the purchase price of the goods and Buyer's payment of all other amounts owing to Seller required under this Invoice and Conditions of Sale.

13. SECURITY INTEREST AND TITLE

In states and localities which are governed by the Uniform Commercial Code, this contract shall serve as security agreement, reserving in Seller a security interest until full payment of purchase price. The provisions of the Uniform Commercial Code regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale. In states and localities where the Uniform Commercial Code does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under the Uniform Commercial Code with the proper registers or offices, or for filing or recording the conditional sales contract.

14. SALES AND USE TAX

Buyer agrees to bear and pay any sales or use tax in connection with the purchase herein, and to hold the Seller harmless from payment. At the option the Seller, Buyer shall give evidence of payment or of exemption certificate.

15. INSURANCE

The Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until the Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

16. MODIFICATION BY SELLER

Any contract may be assigned or transferred by the Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of the Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

17. RETURNED GOODS

No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

18. PACKING

The Buyer will be charged for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

19. CHANGES/CANCELLATION

NORD Gear will not accept changes in specifications to a confirmed order unless such changes are requested in writing and confirmed back in writing. In addition, the purchaser must to agree to any additional charges that may arise from the change. Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

20. BUYER'S RESPONSIBILITY AS TO MAINTENANCE

Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operation procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to defend, indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to defend, indemnify and save Seller harmless from any such claims arising from such accident.

21. MISCELLANEOUS PROVISIONS

(a) If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and affect, except that the parties shall try to replace such invalid provision closest to their original mutual intentions. (b) This Invoice and these Conditions of Sale constitute the entire agreement between the parties regarding the subject matter hereof and supercedes all prior agreements, understandings and statements, whether oral or written, regarding such subject matter. No modification to, change in or departure from, the provisions of this Invoice and Conditions of Sale shall be valid or binding on Seller, unless approved in writing by Seller. No course of dealing or usage of trade shall be applicable unless expressly incorporated into this Invoice and Conditions of Sale. Any amendments to any contract or contracts between the parties shall be valid only upon the written consent of both parties.

22. NON ASSIGNMENT BY BUYER

Contract or contracts may not be assigned by the Buyer without prior written consent of the Seller.

23. APPLICABLE LAW AND VENUE

All contracts and their interpretation are governed by the applicable, substantive laws of the State of Wisconsin. Any litigation brought by the Buyer regarding this Invoice or goods purchased hereunder may only be brought in the Circuit Court for Dane County, Wisconsin.

TERMS & CONDITIONS OF SALE

1. CONTRACT
Any contract between Nord Gear Limited, hereinafter designated as "Seller", and the party or parties accepting these terms and conditions of sale and any agent, officer, servant, employee or subcontractor of such party or parties, hereinafter designated as "Buyer", is subject to the terms and conditions of sale hereinafter set forth. Any deviation from such terms and conditions must be specifically set forth in writing and consented to by Seller.

2. CONFIRMATION
An order shall be deemed accepted only when duly confirmed by Seller, at Nord Gear Limited's home office in Brampton, Ontario, and upon such confirmation the orders shall become a contract binding upon the parties hereto, their successors and assigns.

3. PRICES
Prices shown are list prices and may be subject to applicable discounts. Unless otherwise agreed upon in writing, prices are FOB factory Brampton, Ontario. Prices and discounts are subject to change without notice until the order is accepted. Seller's prices do not include cost of any inspection permits required.

4. LIMITED WARRANTY
Seller warrants the goods sold hereunder to be free from defects in material and workmanship under normal use and service not arising from misuse, negligence, or accident, including but not limited to the use, installation, and transportation of the goods by Buyer, its agents, servants, employees, or by carriers. This warranty shall pertain to any part or parts of any goods to which Buyer or its assigns has within one year from date of delivery given written notice of claimed defects to Seller. Buyer shall be required to furnish Seller with details of such defects and this warranty shall be effective as to such goods which Seller's examination shall disclose to its satisfaction to have been defective and which at Seller's option shall promptly thereafter be returned to Seller or its nominees. EXCEPT FOR THE EXPRESS WARRANTIES SET FORTH ABOVE, SELLER HAS MADE NO WARRANTIES, EXPRESS, IMPLIED OR STATUTORY, AS TO THE GOODS SOLD HEREUNDER, INCLUDING, BUT NOT LIMITED TO THEIR MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. ANY DESCRIPTION OR MODEL OF THE GOODS IS FOR IDENTIFICATION OR ILLUSTRATIVE PURPOSES ONLY AND SHALL NOT BE DEEMED TO CREATE AN EXPRESS WARRANTY. The Buyer's exclusive remedy for claims arising from defective or nonconforming goods shall be limited to the repair or replacement thereof at the Seller's sole option. THE SELLER SHALL NOT BE RESPONSIBLE OR LIABLE FOR CONSEQUENTIAL DAMAGES ARISING OUT OF OR IN CONNECTION WITH THE SALE, DELIVERY, USE, PERFORMANCE, OR SERVICE OF THE GOODS SOLD UNDER THIS AGREEMENT. SELLER SHALL NOT BE LIABLE FOR ANY LOST PROFITS OR FOR ANY CLAIM OR DEMAND AGAINST SELLER BY ANY PARTY. IN NO EVENT WILL SELLER BE LIABLE FOR SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES, EVEN IF SELLER HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. SELLER'S AGGREGATE LIABILITY FOR DAMAGES UNDER THIS AGREEMENT, WHETHER ARISING FROM OR BASED UPON BREACH OF WARRANTY, BREACH OF CONTRACT, TORT OR OTHER CAUSE OF ACTION, SHALL IN NO CASE EXCEED THE PURCHASE PRICE THAT BUYER PAYS FOR THE PARTICULAR GOODS INVOLVED. Seller shall in no event be liable to any person or firm (including any assignee or Buyer) except Buyer and its successors. Unless specifically authorized by Seller in writing, Seller shall not become responsible for any repair work done by Buyer or any other party on any goods sold. Any costs of the return of such goods to Seller shall be borne by Buyer. Goods sold but not manufactured by Seller are being warranted as to defects in material and workmanship consistent with the limited warranty policy of the original manufacturer of the goods and if there is not such a limited warranty policy, the warranty shall be limited to the provisions of Article 4 herein. Standards for the operating characteristics of the gearboxes and the gear motors are in conformity with Seller's tests. THIS WARRANTY IS IN LIEU OF ALL OTHER EXPRESS OR IMPLIED WARRANTIES, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE SELLER DOES NOT ASSUME, NOR DOES IT AUTHORIZE ANY PERSON TO ASSUME, ON ITS BEHALF, ANY OTHER OBLIGATION OR LIABILITY.

5. SHORTAGE AND NONCONFORMITY
Any claim of shortage or that the goods do not conform with the specifications of the order or model must be made in writing within ten (10) days after delivery of the goods (as to which such claim is made) to Buyer or its nominees, but in no event shall the claim be later than within the time limit provided by the carrier or insurance company, otherwise such claim shall be deemed waived. The samples, measurements, dimensions and weights contained in Seller's catalogs, sales manuals, photographs and drawings constitute only an approximate guide. Seller reserves the right to make any changes which Seller, in its absolute discretion, considers necessary. While the goods will be delivered principally according to specifications of standards or quantities agreed upon, insignificant deviations or insignificant changes in construction are permissible. The same applies to partial deliveries. In the event that Buyer has a verified claim of shortage or nonconformity of the goods to the specifications of the order or the model, and if such claim has been submitted within the required time limit as set forth above, Seller shall, at its own expense, make up for the shortage of the goods, or replace or repair the goods, as the cause may be, but in no event shall Seller be or become liable to Buyer or to any other person or persons for any loss in damage, direct or indirect, arising out of or caused by such incidents or for the loss of profits, business of good will. Shipping dates are estimates unless parties expressly agree on time of the essence.

6. FORCE MAJEURE
The obligation of Seller shall be modified or excused, as the case may be, for reasons of Acts of God, war, governmental law regulations, strikes or lock-outs, fire, breakdown of machinery, whether in its own business enterprise, or if for any other cause beyond Seller's control, the goods cannot be delivered or their delivery becomes delayed in whole or in part. In the above instances time for delivery shall be extended for the period of the delay caused, with the proviso, however, that either party may cancel in writing the undelivered portion of the order of contract if the delay exceeds six (6) months from the delivery date originally confirmed by Seller. In no event shall Seller become liable in the aforesaid instances to Buyer or any third party for consequential damages or business loss.

7. SHIPMENT AS UNIT
Each shipment by Seller shall be treated as a separate and distinct unit with respect, but only with respect to forwarding, terms of payment, and the making of claims by Buyer; provided, however, that if Buyer defaults in the payment of any obligation to Seller or any installments thereof, under any agreement between Buyer and Seller, or if Buyer refuses to accept any goods when tendered for delivery, Seller may, on fifteen (15) days written notice to Buyer, without prejudice to Seller's other lawful remedies, either defer further performance until the defaulted payments are made in full, or make future deliveries for cash in advance only, or to treat the entire contract or contracts with Buyer as breached by Buyer and pursue its remedies for breach.

8. BUYER'S REFUSAL OF D ELIVERY
If Buyer refuses to accept delivery of any goods tendered for delivery, then Seller, without prejudice to Seller's other lawful remedies, may either store or cause such goods to be stored in a warehouse, for Buyer's account and at Buyer's cost, risk and expense, or sell such goods (without notice) to any purchaser at public or private sale, and hold Buyer liable for any difference between (A) the contract price of the goods, and (B) the price at which goods are resold less the costs and expense of such resale including brokerage commissions, or restocking charges.

9. GOODS IN TRANSIT
If prior to delivery or while the goods are in transit, Buyer or Seller becomes bankrupt or insolvent, or any petition in bankruptcy or for the reorganization or for appointment of a receiver is filed against Buyer or Seller, as the case may be, then the other party hereto may forthwith terminate this contract by giving written notice of such termination. Such termination shall not affect any claim for damages available to Buyer, to Seller, as actually paid in money, is abated by any order of judgment entered or any plan adopted in any bankruptcy, reorganization, receivership, or similar proceeding. Such termination shall not prejudice Seller's rights to any amounts then due under the contract. If Buyer becomes bankrupt or insolvent or any petition in bankruptcy or for reorganization or if a state court receivership is filed against Buyer, then, at its option, Seller may take possession of any goods theretofore sold to Buyer, in connection with which the full purchase price has not been paid, analogous to the terms and provisions set forth in Paragraphs 11 and 12 hereinafter.

10.DELIVERY
(A)Unless otherwise agreed, delivery of the goods to any carrier shall constitute delivery to Buyer, and thereafter the risk of loss or damage to the goods shall be upon Buyer. (B) If Buyer does not give delivery instructions to Seller at least ten (10) days prior to the delivery date ex factory confirmed by Seller, Seller may deliver the goods to a carrier of its own choosing, at Buyer's cost and risk, or, at Seller's option may store the goods on the pier or on any warehouse at Buyer's cost and risk. Any purchase price in such event becomes due and payable within ten (10) days of such storage.

11. PAYMENT OF PURCHASE PRICE
Time of payment is of the essence under the contract. Upon default in any of the terms of the contract, or failure to comply with any of the conditions thereof, or upon seizure of the property under execution or other legal process, or if Buyer becomes bankrupt or insolvent, or any petitions for reorganization or for appointment of a receiver is filed against Buyer, or if Buyer makes any assignment for the benefit of its creditors or otherwise sells, encumbers or disposes of the goods, or if for any other reason Seller should deem itself insecure, the full amount of the purchase price then remaining unpaid shall at once become due and payable at the option of Seller. Interest on the delinquent payment from the due date thereof until paid shall be at a rate of two (2%) percent per month.

12. BUYER'S DEFAULT
Upon Buyer's default, Seller may dispose of the merchandise in any manner that it deems fit and, if it desires to resell same, may do so at private or public sale, with or without notice, and with or without the property being at the place of sale, subject, however, to applicable laws. Seller or its assigns shall have the right to bid at such sale and may become the purchaser of the property. The proceeds of the sale shall first be applied to the expenses incurred in retaking, repairing, storing and selling the goods; reasonable solicitor's fees included, and then shall be applied to the payment of the balance due under the contract. Any surplus amount shall be paid to Buyer. If a deficiency results after the sale, Buyer agrees to pay such forthwith, together with reasonable solicitor's fees, for the recovery of the goods incurred by Seller. If upon Buyer's default, Seller elects not to resell any goods which it may repossess, then the cost of repossession, including reasonable solicitor's fees, shall forthwith be due and payable from Buyer to Seller.

13. SECURITY INTEREST AND TITLE
In provinces which are governed by a Personal Property Security Act, this contract shall serve as a security agreement, reserving in Seller a security interest until full payment of the purchase price. The provisions of the Personal Property Security Act regarding security interest shall have preference and apply if inconsistent with other terms of the conditions of sale herein. In provinces where a Personal Property Security Act does not apply, title to the goods shall remain in the Seller or its assigns until full payment of the purchase price. Buyer agrees to execute forthwith any and all documents in such a way and form as Seller may need for filing or recording the security interest under a Personal Property Security Act with the proper registers or offices, or for filing or recording the Conditional Sales Contract herein.

14. SALES AND USE TAX
Seller's prices do not include sales, use, excise or other taxes payable to any governmental authority in respect of the sale of Seller's goods. Buyer shall pay, in addition to Seller's price, the amount of any such taxes or shall reimburse Seller for the amount thereof that Seller may be required to pay. At the option of Seller, Buyer shall give evidence of payment or of exemption certificate.

15. INSURANCE
Buyer shall keep the goods insured against damage by fire, water or other casualty as required by Seller, with a company acceptable to Seller, with loss payable to Seller for the total purchase price until Seller is fully paid. Seller, if it so elects, may place said insurance at Buyer's expense; Seller may cancel such insurance at any time and without notice and may receive the return premium, if any.

16. MODIFICATION BY SELLER
Any contract may be assigned or transferred by Seller, or the time for the making of any payment due by Buyer may be extended by Seller without derogation of any of the rights of Seller or its assigns. Waiver by any party of any default shall not be deemed a waiver of any subsequent default.

17. RETURNED GOODS
No goods will be accepted for return unless authorized in writing by Seller. In all cases, transportation and restocking charges will be borne by Buyer.

18. PACKING
Seller does not charge for standard packaging for domestic shipment. Buyer will be charged, however, for export packaging or other special packing desired. Cost for cartage to ship or transfer express will be added to the invoice. No credit will be allowed if no packing is required.

19. EXPORT ORDER
Export orders are to be accompanied by a confirmed irrevocable Letter of Credit in Seller's favor, in Canadian currency, with an accredited Canadian bank, subject to Seller's draft, with shipping documents attached.

20. CANCELLATION
Placing orders on hold or cancellation of orders require Seller's written approval, and are subject to cancellation and/or restocking charges.

21. BUYER'S RESPONSIBILITY AS TO MAINTENANCE
Buyer shall use and shall require its employees and agents to use all safety devices and guards and shall maintain the same in proper working order. Buyer shall use and require its employees and agents to use safe operating procedures in operating the equipment and shall further obey and have its employees and agents obey safety instructions given by Seller. If Buyer fails to meet the obligations herein, Buyer agrees to indemnify and save Seller harmless from any liability or obligation with regard to any personal injuries or property damages directly or indirectly connected with the operation of the equipment. Buyer further agrees to notify Seller promptly and in any event not later than ten (10) days after notice or knowledge of any accident or malfunction involving Seller's equipment which has caused personal injury or property damages and to cooperate fully with Seller in investigating and determining the causes of such accident and malfunction. In the event that Buyer fails to give such notice to Seller or to cooperate with Seller, Buyer shall be obligated to indemnify and save Seller harmless from any such claims arising from such accident.

22. MISCELLANOUS PROVISIONS
(A)If for any reason a provision of a contract is legally invalid, then in such event the rest of the contract shall remain in full force and affect, except that the parties shall try to replace such invalid provision with a provision closest to their original mutual intentions. (B) Any amendments to any contract or contracts require the consent in writing by both parties. Headings in this document are for ease of reference only.

23. NON ASSIGNMENT BY BUYER
Contract or contracts may not be assigned by Buyer without prior written consent of Seller.

24. APPLICABLE LAW
This agreement shall be governed by the laws of the Province of Ontario and the applicable laws of Canada. Buyer and Seller agree that any judicial proceeding with respect to this agreement must be brought and maintained in the City of Toronto, In the Province of Ontario.

25.
This instrument sets forth the entire understanding and agreement of the parties hereto in respect of the subject matter hereof, and all prior undertaking between the parties hereto, together with all representations and obligations of such parties in respect of such subject matter, shall be superseded by and merged into this instrument.

26.
The provisions of this agreement shall bind and ensure to the benefit of the parties hereto and their respective heirs, executors, administrators, successors and (subject to any restrictions or assignment herein above set forth) assigns, as the case may be.

27.
The parties acknowledge that they have requested this document and all notices or other documents relating thereto be drafted in the English language.

Les parties reconnaissent qu'ils ont requis que ce contrat et tous les avis ou autres documents qui s'y rapportent soient rédiges en langue anglaise.

"Terms and Conditions in French available upon request."

Product Overview

We can match our NORDAC AC vector drives with our Inverter/Vector Duty Motors and UNICASE™ Speed Reducers to provide a total AC Motor Drive solution from one trusted source.

UNICASE™ SPEED REDUCERS

HELICAL IN-LINE
- Foot or Flange Mount
- Torque up to 205,000 lb-in
- Gear ratios – 1.82:1 to over 300,000:1

NORDBLOC® HELICAL IN-LINE
- Foot or Flange Mount
- Torque up to 26,550 lb-in
- Gear ratios – 1.88:1 to over 370:1

PARALLEL HELICAL CLINCHER™
- Shaft, Flange or Foot Mount
- Torque up to 797,000 lb-in
- Gear ratios – 4.26:1 to over 300,000:1

RIGHT ANGLE HELICAL-BEVEL 2-STAGE
- Foot, Flange or Shaft Mount
- Torque up to 5,840 lb-in
- Gear ratios – 4.1:1 to 72:1

RIGHT ANGLE HELICAL-BEVEL
- Foot, Flange or Shaft Mount
- Torque up to 283,000 lb-in
- Gear ratios – 8.04:1 to over 300,000:1

RIGHT ANGLE HELICAL-WORM
- Foot, Flange or Shaft Mount
- Torque up to 27,585 lb-in
- Gear ratios – 4.40:1 to over 300,000:1

MINICASE™ RIGHT ANGLE WORM
- Foot, Flange or Shaft Mount
- Torque up to 3,540 lb-in
- Gear ratios – 5:1 to 500:1

FLEXBLOC™ WORM
- Modular bolt-on options
- Torque up to 4,683 lb-in
- Gear ratios – 5:1 to 3,000:1

HIGH PERFORMANCE MOTORS & BRAKEMOTORS

INVERTER/VECTOR DUTY
- Standard or Energy Efficient
- Integral, NEMA or Metric IEC
- 1/6 to 250 hp

NORDAC AC VECTOR DRIVES

TRIO SK300E
- Motor or remote mounted
- IP55 – washdown
- 380-460V, 3-phase, to 5hp
- 200-240V, 3-phase, to 3hp

SK500/520/530E
- Compact, high performance
- 380-480V, 3-phase, to 10hp
- 200-240V, 3-phase, to 5hp
- 200-240V, 1-phase, to 3hp
- 110-120V, 1-phase, to 1.5hp

SK700E
- Flexible high performance
- 380-460V, 3-phase, to 200hp

INSTALLER: PLEASE LEAVE THIS MANUAL FOR THE OWNER'S USE
OWNER: READ AND SAVE THESE INSTRUCTIONS

SAFETY INSTRUCTIONS

⚠ This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠ WARNING
Before installing, using, or servicing this product, carefully read and fully understand the instructions including all warnings, cautions, & safety notice statements. To reduce risk of personal injury, death and/or property damage, follow all instructions for proper motor installation, operation and maintenance.

These instructions are not intended as a complete listing of all details for installation, operation, and maintenance. If you have any questions concerning any of the procedures, STOP, and call the appropriate Regal-Beloit motor company.

Table of Contents

1.0 INSTALLER / OWNER / OPERATOR RESPONSIBILITY
1.1 Electrical Safety
1.2 Mechanical Safety
1.3 Environmental Safety
2.0 RECEIVING & INSPECTION
2.1 Initial Inspection
2.1.1 Packing List & Inspect
2.1.2 Turn Motor Shaft
2.1.3 Check Nameplate
2.2 Handling
2.2.1 Correct Lifting Angles
2.3 Storage
2.3.1 Bearing Lubrication
2.3.2 Shaft Rotation
2.3.3 Damp or Humid Storage Locations
3.0 INSTALLATION AND OPERATION
3.1 Location
3.1.1 Selecting a Location
3.1.2 Ambient Temperature Limits
3.1.3 Construction Selection per Location
3.1.3.1 Dripproof
3.1.3.2 Totally Enclosed
3.1.3.3 Hazardous Locations Motors
3.2 Mounting Motor
3.2.1 Rigid Base (Footed)
3.2.2 Rigid Base Hole Selection -6 or 8 Hole Bases
3.2.3 Vertical
3.3 Application Assembly to Motor
3.3.1 General: Proper Alignment
3.3.2 Direct Coupling
3.3.3 Direct Connected
3.3.4 Belted
3.3.5 VFD Operation
3.3.6 Accessories
3.3.6.1 General
3.3.6.2 Brake Motors
3.3.6.3 Space Heaters
3.3.6.4 Thermal Protection General, Thermostats, Thermisters & RTDs
3.3.6.5 RTD Alarm & Trip Settings
3.3.7 Guards
3.4 Electrical Connections
3.4.1 Power Supply / Branch Circuit
3.4.1.1 Branch Circuit Supply
3.4.1.2 Fuses, Breakers, Overload Relays
3.4.1.3 AC Power Supply Limits
3.4.2 Terminal Box
3.4.2.1 Conduit opening
3.4.2.2 Hazardous Locations
3.4.3 Lead Connections
3.4.3.1 Wire Size Requirements (Single Phase)
3.4.3.2 Extension Cords (Single Phase)
3.4.4 Ground Connections
3.4.5 Start Up
3.4.5.1 Start Up – No Load Procedure
3.4.5.2 Start Up – Load Connected Procedure
3.4.5.3 Jogging and/or repeated starts
4.0 MAINTENANCE
4.1 General Inspection

4.1.1 Ventilation
4.1.2 Insulation
4.1.3 Electrical Connections
4.2 Lubrication and Bearings
4.2.1 Grease Type
4.2.2 Bearing Operating Temperature
4.2.3 Lubrication Interval
4.2.4 Lubrication Procedure
4.2.5 Lubrication Example
4.3 Trouble Shooting
4.3.1 General Trouble-Shooting Warnings
4.3.2 Trouble-Shooting Cause / Corrective Action

motor is suitable for use on Pulse Width Modulated (PWM) type VFD power. In addition, the nameplate must be marked with the inverter rating; for example, "2:1 CT", "2 to 1 Constant Torque", etc.

1.0 INSTALLER/OWNER/OPERATOR RESPONSIBILITY:

1.1 ELECTRICAL SAFETY

⚠ WARNING: ELECTRICAL SHOCK HAZARD

Electrical connections shall be made by a qualified electrical personnel in accordance with all applicable codes, ordinances and sound practices. Failure to follow these instructions could result in serious personal injury, death and/or property damage. Only qualified personnel who are familiar with the applicable National Code (USA = NEC) and local codes should install or repair electrical motors and their accessories.

⚠ WARNING: ELECTRICAL LIVE CIRCUIT HAZARD

Do not touch electrically live parts. Disconnect, lockout and tag input power supply before installing or servicing motor (includes accessory devices). Use a voltmeter to verify that power is off before contacting conductors.

⚠ WARNING: ELECTRICAL GROUNDING HAZARD

Failure to properly ground motors, per the National Electrical Code (NEC) Article 430 and local codes may cause serious injury or death to personnel. For general information on grounding refer to NEC Article 250. (Also see "Ground Connections section 3.4.4").

⚠ WARNING: AUTOMATIC RESET PROTECTOR HAZARD

Do not use automatic reset protectors if automatically restarting the motor will place personnel or equipment at risk. . Failure to follow this instruction could result in serious personal injury, death and/or property damage

⚠ WARNING: MANUAL RESET PROTECTOR HAZARD

If a tripped manual reset thermal protector is exposed to a temperature less than –7°C (20°F) it may reset and restart the motor automatically. If an application requires a motor with a manual reset thermal protector that will be operated at temperatures less than –7°C (20°F) contact the manufacturer to review the application / motor requirements. Failure to follow this instruction could result in serious personal injury, death and/or property damage

1.2 MECHANICAL SAFETY

⚠ WARNING: LOOSE PARTS HAZARD

Before starting the motor, remove all unused shaft keys and loose rotating parts to prevent them from flying off. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

⚠ WARNING: ROTATING PARTS HAZARD

Keep extremities, hair, jewelry and clothing away from moving parts. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

1.3 ENVIRONMENTAL SAFETY

⚠ WARNING: HAZARDOUS LOCATIONS

(1) The NEC and the local authority having jurisdiction must be consulted concerning the installation and suitability of motors for use in Hazardous Locations. The local authority having jurisdiction must make the final determination of what type of motor is required. The application and operation is beyond the control of the motor manufacturer.

(2) Division 1 Hazardous Locations motors can only be modified or reworked by the manufacturer or a facility that is Listed under UL's category "Motors and Generators, Rebuilt for use in Hazardous Locations". Failure to follow these instructions could result in serious personal injury, death and/or property damage.

(3) Do not use a Hazardous Locations motor with a Variable Frequency Drive (VFD) unless the motor nameplate specifically states that the

2.0 RECEIVING AND INSPECTION

2.1 INITIAL INSPECTIONS

2.1.1 CHECK PACKING LIST AND INSPECT the packaging to make certain no damage has occurred in shipment. If there is visible damage to the packaging, unpack and inspect the motor immediately. Claims for any damage done in shipment must be made by the purchaser against the transportation company.

2.1.2 TURN MOTOR SHAFT by hand to be certain that it rotates freely. Note: Shaft seals and bearing seals may add drag.

2.1.3 CHECK NAMEPLATE for conformance with purchase order requirements and compliance with power supply and control equipment requirements.

2.2 HANDLING:

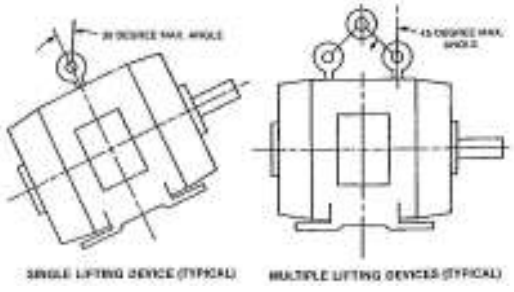
⚠ WARNING: FALLING OBJECT HAZARD

Eyebolts or lifting lugs, where provided, are intended for lifting only the motor and accessories mounted by the motor manufacturer (unless specifically stated otherwise on the motor). Utilizing the motor lifting provision to lift other components such as pumps and gear boxes could result in serious personal injury, death and/or property damage.

⚠ WARNING: FALLING OBJECT HAZARD

Before using the lifting provision, check the eyebolts and/or other lifting means to assure they are not bent or damaged and are completely threaded, seated & secured to the motor. Equipment to lift motor must have adequate lifting capacity. While lifting the motor DO NOT stand under or in the vicinity of the motor. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

2.2.1 LIFTING ANGLE LIMITATIONS



2.3 STORAGE: Motors, not put into service immediately, must be stored indoors in a clean, dry location. Avoid locations with large temperature swings that will result in condensation. Motors must be covered to eliminate airborne dust and dirt. If the storage location exhibits high vibration, place isolation pads under motor to minimize damage to motor bearings.

2.3.1 BEARING LUBRICATION: Bearings are grease packed at the factory; relubrication upon receipt of motor or while in storage is not necessary. If stored more than one year, add grease per lubrication instructions (Table 4-4) before start-up.

2.3.2 SHAFT ROTATION: It is recommended that the motor shaft be rotated 5 to 10 rotations every three months to distribute the grease in the bearings. This will reduce the chance for corrosion to form on the bearing rolling elements and raceways. Note: Shaft seals and bearing seals may add drag.

2.3.3 DAMP OR HUMID STORAGE LOCATIONS: Treat unpainted flanges, shafts, and fittings with a rust inhibitor. Apply appropriate power to the motor's space heaters (if so equipped)

3.0 INSTALLATION AND OPERATION

⚠ **WARNING:** Only qualified personnel who are familiar with the appropriate national code, local codes and sound practices should install or repair electrical motors and their accessories. Installation should conform to the appropriate national code as well as local codes and sound practices. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

⚠ **WARNING: ELECTRICAL LIVE CIRCUIT HAZARD**
Do not touch electrically live parts. Disconnect, Lockout and Tag input power supply before installing or servicing motor (includes accessory devices). Use a voltmeter to verify that power is off before contacting conductors.

3.1 LOCATION

3.1.1 SELECTING A LOCATION: Consideration should be given to environment and ventilation. Motors should be installed in an area that is protected from direct sunlight, corrosives, harmful gases or liquids, dust, metallic particles, and vibration. A motor with the proper enclosure for the expected operating condition should be selected. Provide accessible clearance for cleaning, repair, service, and inspections (See section 3.1.3 for construction clearances). The location should be considered for possible future motor removal / handling. The free flow of air around the motor should not be obstructed.

3.1.2 AMBIENT TEMPERATURE LIMITS: The ambient temperatures of the air inlet to the motor should not exceed 40°C (104°F) or be less than -30°C (-22°F) unless the motor nameplate specifically states an ambient temperature outside of these limits. The ambient inside an enclosure built around the motor shall not exceed the nameplate ambient. For ambient temperatures outside of these limits consult the motor manufacturer.

⚠ **CAUTION: INSULATION DEGRADATION WARNING**
Insulation at high temperatures ages at an accelerated rate. Each 10°C increase in temperature reduces the insulation life by one half.

⚠ **WARNING: HAZARDOUS LOCATIONS AMBIENT LIMIT:** Division 1 Hazardous Locations motors shall **NOT** be operated below –25°C (-13°F) ambient. (Low temperatures reduce the component mechanical properties.)

3.1.3 CONSTRUCTION SELECTION per LOCATION:

3.1.3.1 DRIPPROOF (OPEN) MOTORS are intended for use indoors where the atmosphere is relatively clean, dry, and non-corrosive. Recommended a minimum clearance of ½ the shaft height between vent openings and the nearest obstruction.

3.1.3.2 TOTALLY ENCLOSED MOTORS are suitable for indoor or outdoor standard service applications.

TEAO or AOM (Totally Enclosed Air Over) motors must be mounted in the air stream. When the motor nameplate states a minimum airflow the motor must be mounted in an air stream meeting this minimum value.

TEFC (Totally Enclosed Fan Cooled) motors must meet a minimum distance of ½ the shaft height between the fan guard grill openings and the nearest obstruction.

3.1.3.3 HAZARDOUS LOCATIONS MOTORS: Hazardous Locations motors are intended for installations in accordance with NEC Article 500. For all installations involving Hazardous Locations motors, consult the applicable national codes, local codes, and the authority having jurisdiction.

Division 1 Installations – includes Class I & II: Use only motors that are UL Listed and CSA Certified or UL Listed and UL Certified for Canada. These motors bear a separate nameplate that includes the UL Listing Mark and CSA Certification Mark or includes the UL Listing Mark and the UL Mark for Canada. This plate also bears the phrase: " Electric motor for Hazardous Locations" and is marked with the Class, Group and Operating Temperature Code.

Division 2 Installations – Class I only: Use only motors that are CSA Certified and bear the CSA Certification Mark. These motors include a phrase on the main motor nameplate that indicates the motor is CSA Certified for Class I, Division 2 / Zone 2 locations.

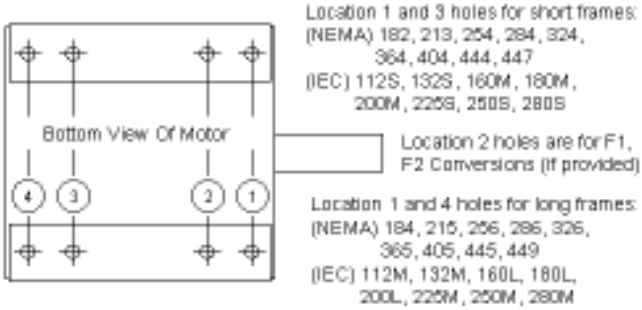
Division 2 Installation – Class II only: Use only Class II motors as described above under "Division I Installations".

⚠ **WARNING: EXPLOSION HAZARD**
A motor should never be placed in an area with a hazardous process or where flammable gases or combustible materials may be present unless it is specifically designed and nameplated for this type of service. Hazardous Locations motors are intended for installations in accordance with NEC Article 500. For all installations involving Hazardous Locations motors, consult the NEC, local codes, and the authority having jurisdiction. Failure to follow these instructions could result in serious personal injury, death and/or property damage. (For other limitations see section 1.3)

3.2 MOUNTING MOTOR:

3.2.1 RIGID BASE (FOOTED): The motor must be securely installed to a rigid foundation or a mounting surface to minimize vibration and maintain alignment between the motor shaft and the load's shaft. The mounting surfaces of the four mounting pads must be flat within 0.01 inches for 210 frame & smaller; 0.015 inches for 250 frame & larger. [IEC 0.25 mm for 130 frame & smaller, 0.38 mm for 160 frame & larger]. This may be accomplished by shims under the motor feet. For special isolation mounting, contact manufacturer for assistance

3.2.2 RIGID BASE HOLE SELECTION -6 OR 8 HOLES



3.2.3 VERTICAL MOUNTING:

CAUTION: ENCLOSURE PROTECTION CAUTION: Most Dripproof rigid base (footed) motors do **NOT** meet "Dripproof" requirements when mounted vertically. If the motor is located in unprotected environments, the addition of a drip cover may be available. Drip covers not available for cast iron rigid base motors.

⚠ **WARNING: FALLING OBJECT HAZARD**
The lifting provision on standard horizontal footed motors is not designed for lifting the motor in a vertical shaft up or shaft down position. (see 2.2.1 lifting angles). Lifting method / provisions for

mounting a rigid base (footed) motor vertically is the responsibility of the installer.

VERTICAL SHAFT DOWN: Most standard horizontal motors thru 449 Fr. (excluding brake motors) can be mounted in a vertical shaft down orientation. For vertical brake motors see section 3.3.6.2.

VERTICAL SHAFT UP:

⚠ **WARNING: HAZARDOUS LOCATIONS VERTICAL MOUNT:** Hazardous locations motors must **NOT** be mounted vertically shaft up without approval by the motor manufacturer. Without proper retaining provisions the rotor may move axially and contact components, creating a spark hazard.

Belted or Radial Load when mounted vertically: The following frame sizes / constructions with applied (axial) down loads within the limit stated are acceptable when mounted vertical shaft up.

Table 3-1 Belted or Radial Load Applications (All speeds)

Frame Size	Enclosure	Construction	Shaft Up OK	Max Applied Down Load[3]
56	TEFC & ODP	Steel	Yes	25 lbs
140	TEFC	Steel & Cast Iron	Yes	25 lbs
	ODP	Steel	Yes	25 lbs
180	TEFC	All	Yes	35 lbs
	ODP	Steel	Yes	35 lbs
210	TEFC	All	Yes	40 lbs
	ODP	Steel	Yes	40 lbs
250	TEFC	All	Yes	40 lbs
	ODP	Steel	Yes	40 lbs
		Cast Iron	No[2]	N/A
280-320	320 TTFC models	Cast Iron	Eng[1]	N/A
	All Other TEFC	Cast Iron & Aluminum	Yes	30 lbs
	ODP	Cast Iron	No[2]	N/A
	TEFC & ODP	Steel	Build Up Only[4]	N/A
360 & Up	TEFC	Cast Iron	Build Up Only[4]	N/A
	ODP	Cast Iron	No[2]	N/A
	TEFC & ODP	Steel	Build Up Only[4]	N/A

Notes:

1 For TEFC model numbers beginning with 324TTFC or 326TTFC consult the motor manufacturer to determine if a build up motor is required.

2 The max applied down load is any applied load external to the motor, including such things as sheave weight, fan loads, axial belt force, pump load, etc. If the application is direct drive with no applied radial load, consult the motor manufacturer.

3 "Build-up only", refers to motors that are specifically ordered and built for shaft up applications. It does not imply that all build-up motors are suitable for shaft up applications.

3.3 APPLICATION ASSEMBLY TO MOTOR:

⚠ **CAUTION: EQUIPMENT DAMAGE:**
Do not connect or couple motor to load until correct rotational direction is established.

3.3.1 GENERAL: PROPER ALIGNMENT of the motor and driven equipment minimizes vibration levels, maximizes bearing life, and extends the overall life of the machinery. Consult the drive or equipment manufacturer for more information.

⚠ **CAUTION: BEARING FAILURE**
During assembly do NOT force components onto the shaft. Striking or hammering the component may result in bearing damage.

3.3.2 DIRECT COUPLING: Use flexible couplings if possible. For applications that apply radial, axial or moment loading on the motor shaft see section 3.3.3.

⚠ **CAUTION: BEARING FAILURE**
Unless approved by the motor manufacturer do **NOT** direct couple a vertical shaft up or roller bearing motor. Direct coupling a vertical shaft up motor or a motor with a roller bearing may result in bearing damage.

3.3.3 DIRECT CONNECTED: Radial loading for direct connected equipment (gears, fans etc.) must be approved by the motor manufacturer unless within the maximum overhung load limits (Table 3-2). Combined loading (axial, radial and/or moments) must be approved by motor manufacturer. For belted loads see section 3.3.4.

Table 3-2 Maximum Radial Load (lbf) @ Middle of the Shaft Extension Length

Frame Number	Motor Rated RPM			
	3600	1800	1200	900
143T	106	166	193	210
145T	109	170	199	218
182T	187	230	261	287
184T	193	237	273	301
213T	319	317	470	510
215T	327	320	480	533
254T	500	631	729	793
256T	510	631	736	820
284T	-	866	990	1100
286T	-	871	1005	1107
324T	-	950	1100	1215
326T	-	950	1113	1230
364T	-	1078	1365	1515
365T	-	1078	1380	1540
404T	-	1388	1590	1762
405T	-	1400	1610	1780
444T	-	1580	1795	2005
445T	-	1520	1795	1985
447T	-	1455	1765	1985
449T	-	1640	1885	2130

Values based on 26,280 hrs B-10 Life
For "End of Shaft" Load multiply value by 0.88
To convert from lbf to N multiply value by 4.4482.

3.3.4 BELTED:

The goal of any belted system is to efficiently transmit the required torque while minimizing the loads on the bearings and shafts of the motor and driven equipment. This can be accomplished by following four basic guidelines:

1. Use the largest practical sheave diameter.
2. Use the fewest number of belts possible.
3. Keep sheaves as close as possible to support bearings.
4. Tension the belts to the lowest tension that will still transmit the required torque without slipping. It is normal for V-belts to squeal initially when line starting a motor

3.3.4.1 Sheave Diameter Guidelines:

In general, smaller sheaves produce greater shaft stress and shaft deflection due to increased belt tension. See Table 3-3 for recommended minimum sheave diameters. Using larger sheaves increases the contact with belts which reduces the number of belts required. It also increases the belt speed, resulting in higher system efficiencies. When selecting sheaves, do not exceed the manufacturer's recommended maximum belt speed, typically 6,500 feet per minute for cast iron sheaves. Determine belt speed by the following formula:

Figure 1

$$\textbf{BELT SPEED (Ft/min)} = \frac{Shaft\ RPM\ x\ 3.14\ x\ Sheave\ Dia\ (inches)}{12}$$

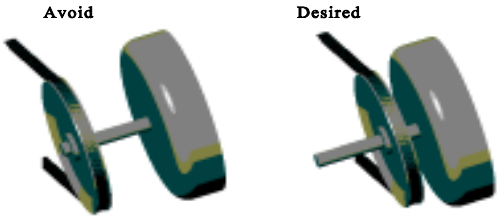
3.3.4.2 Number of Belts

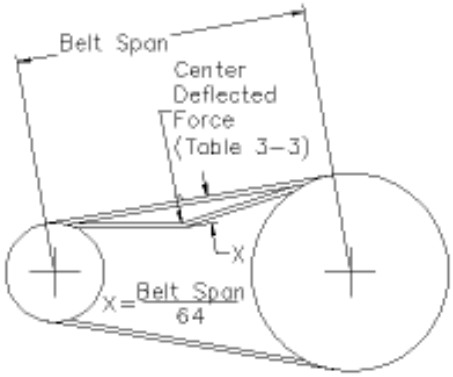
In general, use the fewest number of belts that will transmit the required torque without slipping. See Table 3-3 for recommended maximum number of belts. Each belt adds to the tension in the system, which increases load on the shafts and bearings. Belts are most efficient when operated at or near their rated horsepower.
If the sheaves have more grooves than the number of belts required, use the grooves closest to the motor.

3.3.4.3 Sheave Location

Install sheaves as close to the housing as possible to increase the bearing life of the motor and driven equipment

Figure 2





3.3.4.4 Belt Tension

CAUTION: Equipment Failure Caution
Belt tensioning by feel is **NOT** acceptable. Tensioning by "feel" can be very misleading, and can damage motor and equipment.
It is normal for V-belts to squeal initially when line starting a motor.

In general, belt tensions should be kept as loose as possible while still transmitting the required torque without slipping. Belt tensions must be measured with a belt tension gage. These inexpensive gages may be obtained through belt manufacturers, or distributors.

Proper belt tension is determined by measuring the force required to deflect the center of the belt a given distance. The proper deflection (in inches) is determined by dividing the belt span in inches by 64. Calculate the proper deflection and then see Table 3-3 for the required “Deflected Force” to achieve that deflection.
After tensioning the belt, rotate the sheaves for several rotations or operate the system for a few minutes to seat belts into the grooves, then re-tension the belts. New belts will stretch during use, and should be retensioned after the first eight hours of use.

Table 3-3 Recommended Minimum Sheave Diameters, Belt Type, Number of Belts and Deflected Force

Motor Hp	1200 rpm				1800 rpm				3600 rpm			
	Min Sheave Dia (in)	Belt Type	Max # of Belts	Avg. Deflected Force (lbs)	Min Sheave Dia (in)	Belt Type	Max # of Belts	Avg. Deflected Force (lbs)	Min Sheave Dia (in)	Belt Type	Max # of Belts	Avg. Deflected Force (lbs)
0.75	2.2	3VX	1	3.4	2.2	3VX	1	2.2	2.2	3VX	1	1.2

800					20.0	8V	13	28.2				

Contact Motor Manufacturer when Belting 3600 rpm Motors Greater than 25 HP

Notes:

1. Horsepower is the nameplate motor horsepower, and RPM is the motor (driver) speed.
2. Minimum sheave diameters are from NEMA standards where applicable.
3. **For variable speed applications or values outside these recommendations, consult motor manufacturer.**
4. Selections are based on a 1.4 service factor, 5 to 1 speed ratio and various Power Transmission Manufacturers' catalogs.
5. These selections are for Narrow V-belt sections only. Consult manufacturer for details on conventional V-belt sections (A, B, C, D and E), or other belt types.
6. "Average Deflected Force is per section 3.3.4.4 of this document and is the force required to deflect the center of a belt 1/64 of the belt span distance. Tolerance on this force is ±1 lbf for forces ≤10 lbs, and ±2 lbs for forces >10 lbs as measured utilizing a belt tension gage.
7. When more than one belt is required the belts must be a matched set (matched for length).
8. If possible, the lower side of the belt should be the driving side to increase the length of wrap on the sheave).
9. For belted loads do not exceed 125% of 60 Hz operating RPM.

3.3.5 VFD (Variable Frequency Drives) OPERATION:

⚠ WARNING: VFD Motors with Reset Thermal Protectors
UL Recognition, UL Listing, or CSA certification does not apply to motors that are equipped with a manual or automatic reset thermal protector when the motor is operated on VFD power.

⚠ WARNING: Power Factor Correction Capacitors:
Power factor correction capacitors should never be installed between the drive and the motor.

⚠ CAUTION: VFD / Motor Setup:
It is the responsibility of the startup personnel during set up of the VFD / motor system to properly tune the drive to the motor for the specific application per the VFD user manual. The correct voltage boost and volts per hertz settings are application dependent and unique to each motor design. Failure to connect over temperature devices (when provided) will void the warranty.

3.3.5.1 Overspeed Capability:

Belted loads: Do not exceed 125% of 60 Hz operating RPM.

Table 3-4 Maximum Safe Continuous Speed (RPM) For Coupled and Direct Connected Loads

NEMA / [IEC] Frame Size	2-Pole	4, 6, or 8 Pole
56-180 [80-110]	7200 *	5400 *
210-250 [130-160]	5400 *	4200*
280 [180]	5400 *	3600
320 [200]	4500 *	3600
360 [225]	4500 *	2700
400-440 [250-280]	3600	2700
>440 [>280]	3600	1800

* = Fan cooled motors (Totally Enclosed & Hazardous Locations Motors) are limited to a maximum safe continuous speed of 4000 RPM **For higher speeds or shortened duty cycle contact motor manufacturer**

3.3.5.2 Cable Lengths: For optimum insulation life, limit VFD to motor cable lengths of general purpose motors

to Table 3-5 values. Definite purpose VFD motors may accommodate longer cable lengths. For additional information contact motor manufacturer.

Table 3-5 Max Cable Lengths General Purpose Motors
These values are based on 3 kHz carrier frequency. Add suitable VFD output-side filters when exceeding the listed values.

Frame Size	230V	460 V	575 V
NEMA 56-320	600 ft.	125 ft.	40 ft.
NEMA 360-5011	1000 ft.	225 ft.	60 ft.
IEC 80-200	180 m.	40 m.	12 m.
IEC 225-280.	300 m.	70 m.	18 m.

3.3.5.3 VFD Grounding: Equipment grounding conductors may be run in the same conduit as the AC motor power leads. This wire must be used as the equipment ground for the motor and not as the fourth current carrying wire of a "WYE" motor circuit. The grounded metal conduit carrying the output power conductors can provide EMI shielding, but the conduit does not provide an adequate ground for the motor; a separate grounding conductor must be used. Grounding the motor neutral (WYE) of a VFD powered motor may result in a VFD ground fault trip. Improper grounding of an inverter fed motor may result in frame voltages in excess of 500 Volts. Refer to Grounding section 3.4.4

3.3.5.4 VFD – Single Phase:

CAUTION: SINGLE PHASE MOTOR FAILURE:
Single Phase motors are **NOT** suitable for use on VFD power. Connecting a Single Phase Motor to a VFD voids the warranty.

3.3.5.5 Stray Voltage on Accessory Leads:

VFD's will couple stray (common-mode) voltage to motor-mounted RTDs, thermistors, thermostats and space heaters. The leads of these elements must be properly insulated and control input circuits must be designed to withstand this common-mode voltage.

3.3.6 ACCESSORIES / PROVISIONS:

3.3.6.1 General: Carefully read and understand the accessory manufacturer's instructions, supplied with motor. Contact the manufacturer for additional information.

3.3.6.2 Brake Motors:

CAUTION: Vertical Motor Premature Brake Failure
Motors with brakes that are designed for vertical applications are equipped with springs to support the brake pressure plate. Mounting a horizontal brake motor vertically shaft up or down may require a pressure plate spring modification. Failure to modify the brake for the vertical application may result in premature brake failure. If in question, consult brake literature or brake manufacturer.

Brake Solenoid Wiring: Do NOT connect the brake solenoid to the output of a VFD. The brake solenoids must be wired to 50/60 Hz line power

3.3.6.3 Space Heaters:

Motors provided with space heaters have two leads that are brought into the conduit box or into an auxiliary box. These leads are marked "H1", "H2" ("H3", "H4" if a second space heater is supplied). See the space heater nameplate on motor for heater rating.

WARNING: DIVISION 2 EXPLOSION HAZARD
The space heater temperature rating when used in Class I, Division 2 motors shall **NOT** exceed 80% of the auto ignition temperature of the hazardous gas or vapor. See the space heater nameplate on motor for heater Temperature Code and heater rating. Failure to follow this instruction could result in serious personal injury, death and/or property damage

3.3.6.4 Thermal Protection:

General Information: When thermal protection is provided, one of the following will be stamped on the nameplate:

1. **"THERMALLY PROTECTED**" This motor has built in thermal protection. Thermal protectors open the motor circuit electrically when the motor overheats or is overloaded. The protector cannot be reset until the motor cools. If the protector is automatic, it will reset itself. If the protector is manual, disconnect motor from power supply. After protector cools (five minutes or more) press the reset button and reapply power to the motor. In some cases a motor is marked "Auto" and the connection diagram on the motor will identify T'Stat leads – see "2 " below. (See warnings on Manual and Automatic reset protectors - section 1.1)

2. **"WITH OVERHEAT PROTECTIVE DEVICE**": This motor is provided with an overheat protective device that does not directly open the motor circuit. Motors nameplated with this phrase have either thermostats, thermisters or RTD's. The leads to these devices are routed into the motor conduit box or into an auxiliary box. The lead markings are defined on the nameplate (normally "P1", "P2") . The circuit controlled by the overheat protection device must be limited to a maximum of 600 volts and 360 volt-amps. See connection decal provided inside the terminal box cover. Failure to connect these over temperature devices (when provided) will void the warranty.

   WARNING: EXPLOSION HAZARD
   For Hazardous Locations motors provided with thermostats UL and the NEC require connection of thermostat leads into the control portion of a manual reset start circuit. Failure to follow this instruction could result in serious personal injury, death and/or property damage

Resistance Temperature Detectors (RTD): When winding and/or bearing RTDs are provided the RTD lead markings are defined on the nameplate. (Normally "R1", "R2", "R3" etc.)

3.3.6.5 RTD Alarm & Trip Settings:

Tables 3-6 & 3-7 are suggested initial RTD alarm and trip settings. For motors found to operate significantly below these values the settings may be reduced accordingly.

Table 3-6 Winding RTD – Temperature Limit (ºC) 40 ºC Max Ambient

Motor Load	Class B Temp Rise≤ 80ºC		Class F Temp Rise≤ 105ºC	
	Alarm	Trip	Alarm	Trip
Up to 1.0 SF	130	140	155	165
>1.0 to 1.15 SF	140	150	160	165

Table 3-7 Bearing RTD – Temperature Limit (ºC) 40 ºC Max Ambient

Ambient	Alarm	Trip
Up to 40**ºC**	95	100
> 40**ºC**	110	115
Bearings that are Heat Stabilized to 150 **ºC**	130	135

3.3.7 GUARDS:

WARNING: ROTATING PARTS HAZARD
When devices are assembled to the motor shaft, be sure to install protective devices such as belt guards, chain guards, and shaft covers. These devices must protect against accidental contact with extremities, hair, and clothing. Consider the application and provide guarding to protect personnel. Remove all unused shaft keys and loose rotating parts to prevent them from flying off and causing bodily injury. Failure to follow this warning could result in serious personal injury, death and/or property damage.

3.4 ELECTRICAL CONNECTIONS:

⚠ WARNING: ELECTRICAL HAZARDS

Before proceeding read Section 1-1 on Electrical Safety. Failure to follow the instructions in Section 1-1 could result in serious personal injury, death and/or property damage

3.4.1 POWER SUPPLY / BRANCH CIRCUIT

⚠ WARNING: POWER SUPPLY INCOMPATIBILITY HAZARD

Check power supply to make certain that voltage, frequency and current carrying capacity are in accordance with the motor nameplate. Failure to match motor nameplate values could result in serious personal injury, death and/or property damage

⚠ WARNING: BRANCH CIRCUIT SUPPLY HAZARD

Motor and control wiring, fusing, overload protection, disconnects, accessories and grounding must always conform to the applicable electrical codes as well as local codes and sound practices.

3.4.1.1 Branch Circuit Supply to a motor should include a disconnect switch, short circuit current fuse or breaker protection, motor starter (controller) and correctly sized thermal elements or overload relay protection.

3.4.1.2 Fuses, Breakers, Overload Relays

Short Circuit Current Fuses or Breakers are for the protection of the branch circuit. Starter or motor controller overload relays are for the protection of the motor. Each of these should be properly sized and installed per the applicable electrical codes as well as local codes and practices.

⚠ WARNING: PROTECTIVE DEVICE DISABLED HAZARD

DO NOT bypass or disable protective devices. Protection removal could result in serious personal injury, death and/or property damage

3.4.1.3 AC Power Supply Limits

Motors are designed to operate within the following limits at the motor terminals:

1- AC power is within +/- 10 % of rated voltage with rated frequency applied. (Verify with nameplate ratings) **OR**

2- AC power is within +/- 5% of rated frequency with rated voltage **OR**

3- A combined variation in voltage and frequency of +/- 10% (sum of absolute values) of rated values, provided the frequency variation does not exceed +/-5% of rated frequency.

4- For 3 phase motors the line to line full load voltage must be balanced within 1%.

5- If the motor is rated 208-230V, the voltage deviations must be calculated from 230V.

CAUTION: Reduced Motor Performance

Operation outside of these limits will degrade motor performance and increase operating temperature.

3.4.2 TERMINAL BOX:

3.4.2.1 Conduit Opening: For ease of connections, motors are typically provided with large terminal boxes. Most motors have conduit access in 90 degree increments, the terminal box conduit opening is typically provided via knockouts, holes with covers, or the terminal box is rotate-able. Fabricated conduit boxes may have a removable plate for the installer to provide correctly sized hole(s).

3.4.2.2 Hazardous Locations Motors:

⚠ WARNING: EXPLOSION HAZARDS

(1) Terminal Boxes mounted to motor with a pipe nipple: If a pipe nipple mounted terminal box is removed or rotated it must be reassembled with a minimum of five full threads of engagement.

(2) Component Removal: Do not set a terminal box component on its machined surfaces. Prior to component reassembly wipe clean all machined surfaces.

(3) Machined Surface Gap (Hazardous Locations Terminal Boxes): The gap between mating surfaces with the machined terminal box MUST BE LESS THAN 0.002 inches. This gap must be checked with a feeler gage along the entire perimeter. If there is visible damage to the mating surfaces, or if the gap between these surfaces exceeds 0.002 inches, DO NOT complete the installation and contact the motor manufacturer. Failure to follow these instructions could result in serious personal injury, death and/or property damage

3.4.3 LEAD CONNECTIONS

Electrical connections to be made per nameplate connection diagram or separate connection plate. In making connections follow the applicable electrical code as well as local codes and practices.

⚠ WARNING: ELECTRICAL CONNECTION HAZARD

Failure to correctly connect the motor leads and grounding conductor can result in injury or death. Motor lead connections can short and cause damage or injury if not well secured and insulated.

3.4.3.1 Wire Size (Single Phase) Requirements

The minimum wire size for Single Phase, 115 & 230 Volt Circuits must meet table 3-8 for a given distance between motor and either Fuse or Meter Box.

Table 3-8 Minimum Wire Gage Size Single Phase 115 & 230 Volt Circuits

Distance (Feet) - Motor to Fuse or Meter Box								
Motor	**100 Ft.**		**200 Ft.**		**300 Ft.**		**500 Ft.**	
HP	**115**	**230**	**115**	**230**	**115**	**230**	**115**	**230**
1/4	14	14	10	12	8	10	6	8
1/3	12	14	10	12	6	10	4	8
1/2	10	12	8	10	6	8	4	6
3/4	10	12	6	10	4	8	2	6
1	8	10	6	8	4	6		4
1 1/2	4	10	0	8		6		4
2		8		6		4		2
3		8		6		4		2
5		6		4		2		0

3.4.3.2 Extension Cords (Single Phase Motors):

Where an extension cord(s) is utilized to provide power to the motor the extension cord(s) must be…(1) the proper gauge size per table 3-8, (2) in good working condition (3) properly grounded.

3.4.4 GROUND CONNECTION(S):

⚠ WARNING: ELECTRICAL GROUNDING HAZARD

For general information on grounding (USA) refer to NEC Article 250. Improper grounding of an inverter fed motor may result in frame voltages in excess of 500 Volts. In making the ground connection, the installer must make certain that a good electrical connection is obtained between motor and grounding lead. Failure to properly ground motors, per the applicable national code (such as NEC Article 430) and local codes may cause serious injury or death to personnel.

Primary "Internal" Ground: A grounding conductor must be connected to the grounding terminal provided in the terminal housing. This grounding terminal is either a ground screw, ground lug, or a tapped hole to be used with a separately provided ground screw. The internal grounding feature is accessible inside the terminal housing and must be used as the primary grounding connection.

Secondary "External" Ground: Some motors are provided with a supplemental grounding terminal located on the external surface of the motor frame or feet. This external terminal is for supplemental bonding connections where local codes permit or require such connection

3.4.5 START UP:

⚠ WARNING: ELECTRICAL SHOCK HAZARD:

Be certain that all connections are secure and the conduit box cover is fastened in place before electrical power is connected. Failure to follow these instructions could result in serious personal injury, death, and/or property damage.

⚠ WARNING: LOOSE & ROTATING PARTS HAZARD
Before proceeding read Section 1-2 on Mechanical Safety. Failure to follow the instructions in Section 1-2 could result in serious personal injury, death and/or property damage

⚠ WARNING: EXCESSIVE SURFACE TEMPERATURE HAZARD
Motors with the temperature code stated on the nameplate are designed to operate within this limit. Improper application or operation can cause the maximum surface temperature to be exceeded. A motor operated in a Hazardous Location that exceeds this surface temperature limit increases the potential of igniting hazardous materials. *Therefore, motor selection, installation, operation, and maintenance must be carefully considered to ensure against the following conditions:* (1) Motor load exceeds service factor value, (2) Ambient temperature above nameplate value, (3) Voltages outside of limits (3.4.1.3), (4) Loss of proper ventilation, (5) VFD operation exceeding motor nameplate rating, (6) Altitude above 3300 feet / 1000 meters, (7) Severe duty cycles, (8) Repeated starts, (9) Motor stall, (10) Motor reversing, and (10) Single phase operation. Failure to follow these instructions could result in serious personal injury, death and/or property damage.

⚠ CAUTION: HOT SURFACE
Normal motor surface temperatures may exceed 90 ° C (194° F). Touching the motor frame may cause discomfort or injury. Surface temperatures should only be measured with suitable instruments and not estimated by hand touch.

3.4.5.1 Start Up - No Load Procedure

1. **Check Instructions:** Before startup carefully read and fully understand these instructions including all warnings, cautions, and safety notice statements.
2. **Motor out of storage after more than three months:** Check winding insulation integrity with a Megger. If winding resistance to ground is less than 1.5 Meg-ohms consult the local authorized service shop before energizing the motor.
3. **Check Installation: Mechanical** - Check tightness of all bolts and nuts. Manually rotate the motor shaft to ensure motor shaft rotates freely. Note: Shaft & bearing seals will add drag.
   Electrical - Inspect all electrical connections for proper terminations, clearance, mechanical tightness and electrical continuity. Be sure to verify connections are made per the nameplate connection diagram or separate connection plate. Replace all panels and covers that were removed during installation before energizing the motor.
4. **Energize Motor: Check Rotation**
   If practical check motor rotation before coupling to the load. Unlock the electrical system. Momentarily provide power to motor to verify direction of rotation. If opposite rotation is required, lock out power before reconnecting motor. If motor has a rotational arrow only operate the motor in the rotation identified. Reapply power to ensure proper operation.
5. **Record No Load Amps, Watts & Voltage:**
   Recommend - To establish a baseline value check and record the no load amps, watts, and voltage.

3.4.5.2 Start Up – Load Connected Procedure

1. **Check Instructions:** Before startup carefully read and fully understand these instructions including all warnings, cautions, & safety notice statements.
2. **Coupling Installation:** Check that the connected equipment is properly aligned and not binding. Check that all guards and protective devices are properly installed.
3. **Energize Motor:** When all personnel are clear of the machine, apply power and verify that the load is not transmitting excessive vibration back to the motor though the shaft or the foundation. Verify that motor amps are within nameplate rating. For repeated starts see 3.4.5.3. The equipment can now be fully loaded and operated within specified limits as stated on the nameplate.

3.4.5.3 Jogging and/or Repeated Starts

Do not start more than twice in succession under full load. Repeated starts and/or jogs of induction motors can cause overheating and immediate failure. Contact the motor manufacturer if it is necessary to repeatedly start or jog the motor.

4.0 MAINTENANCE:

⚠ WARNING: Hazardous Locations Motor Repair HAZARD:
Division 1 Hazardous Locations motors can only be modified or repaired by the manufacturer or a facility that is Listed under UL's category "Motors and Generators, Rebuilt for use in Hazardous Locations". Failure to follow these instructions could result in serious personal injury, death and/or property damage.

⚠ WARNING: ELECTRICAL SHOCK HAZARD
Electrical connections are to be made by qualified electrical personnel in accordance with all applicable codes, ordinances and sound practices. Failure to follow these instructions could result in serious personal injury, death and/or property damage. Only qualified personnel who are familiar with the applicable national codes, local codes and sound practices should install or repair electric motors and their accessories.

⚠ WARNING: ELECTRICAL LIVE CIRCUIT HAZARD
Do not touch electrically live parts. Disconnect, lockout and tag input power supply before installing or servicing motor (includes accessory devices).

4.1 GENERAL INSPECTION

Inspect the motor approximately every 500 hours of operation or every three months, whichever occurs first. Keep the motor clean and the ventilation and fin openings clear. The following steps should be performed at each inspection:

4.1.1 VENTILATION: Check that the ventilation openings and/or exterior of the motor is free of dirt, oil, grease, water, etc, which can accumulate and block motor ventilation. If the motor is not properly ventilated, overheating can occur and cause early motor failure.

4.1.2 INSULATION: Use a "Megger" periodically to ensure that the integrity of the winding insulation has been maintained. Record the Megger readings. If winding resistance to ground is less than 1.5 Meg-ohms consult the local authorized service shop before re-energizing the motor.

4.1.3 ELECTRICAL CONNECTIONS: Check all electrical connectors to be sure that they are tight.

4.2 LUBRICATION & BEARINGS:

The lubricating ability of grease (over time) depends primarily on the type of grease, the size of the bearing, the speed at which the bearing operates and the severity of the operating conditions. Longer bearing life can be obtained if the listed recommendations are followed:

NOTE: If lubrication instructions are provided on the motor nameplate, the nameplate instructions will supersede these instructions. Motors marked "Permanently Lubricated" do not require additional service.

⚠ CAUTION: BEARING / MOTOR DAMAGE WARNING
Lubricant should be added at a steady moderate pressure. If added under heavy pressure bearing shield(s) may collapse. Over greasing bearings greatly increases bearing friction and can cause premature bearing and/or motor failure.

4.2.1 GREASE TYPE (unless nameplate states otherwise):
Nameplate Ambient Temperature between -30°C (-22°F) to 65°C (150°F) inclusive: Recommended grease for standard service conditions is Mobil Polyrex ® EM. Equivalent and compatible greases include: Texaco Polystar RB, Rykon Premium #2, Pennzoil Pen 2 Lube, Chevron SRI & Mobil SHC 100.

Nameplate Ambient Temperature below -30°C (-22°F): Special low temperature grease is recommended, such as Aeroshell 7 or Beacon 325 for ball bearings and Mobil SHC 100 for roller bearings.

Nameplate Ambient Temperature above 65°C (150°F): Dow Corning DC44 or equivalent, a special high temperature grease is required. Note that Dow Corning DC44 grease does not mix with other grease types.

For RTD settings see Table 3-7.

4.2.2 BEARING OPERATING TEMPERATURE:

CAUTION: HOT SURFACE

The external surface temperature of the end shield (bracket) bearing hub may reach 100° C (212° F) during normal operation. Touching this surface may cause discomfort or injury. Surface temperatures should only be measured with suitable instruments and not estimated by hand touch.

4.2.3 LUBRICATION INTERVALS: (For motors with regreasing provisions)

Eq. 4.2 Lubrication Interval = [(Table 4-1) hrs] x [Interval Multiplier (Table 4-2)] x [Construction Multiplier (Table 4-3)]

Table 4-1 Lubrication Intervals (Hours) These values are based on average use.

NEMA / [IEC] Frame Size	Operating Speed – RPM (See Table 3.4 for Maximum Operating Speed)					
	<7200	<5400	<4500	<3600	<1800	<1200
56-180 [80-110]	2500 Hrs.	4000 Hrs	5000 Hrs	6000 Hrs.	17000 Hrs.	20000 Hrs.
210-250 [130-160]		2500 Hrs	4000 Hrs	5000 Hrs.	12000 Hrs.	16000 Hrs.
280 [180]		2000 Hrs	3000 Hrs	4000 Hrs.	10000 Hrs.	14000 Hrs.
320 [200]			2000 Hrs	3000 Hrs.	9000 Hrs.	12000 Hrs.
360 [225]			1500 Hrs	2000 Hrs.	8000 Hrs.	10000 Hrs.
400-440 [250 – 280]				1500 Hrs.	4000 Hrs.	7000 Hrs.
>440 [>280]				1000 Hrs.	3000 Hrs.	5000 Hrs.

Seasonal Service: If motor remains idle for more than six months, Lubricate at the beginning of the season, then follow lubrication interval.

Do not exceed maximum safe operating speed Table 3-4 without manufacturer's approval

Table 4-2 Service Conditions

Use highest level Multiplier: Maximum Ambient Temperature and Contamination are independent factors

Severity of Service	Maximum Ambient Temperature	Atmospheric Contamination	Multiplier
Standard	Less than 40° C (104° F)	Clean, Slight Corrosion, indoors, less than 16 hrs per day	1.0
Severe	Above 40° C (104° F) to 50° C	Moderate dirt or Corrosion or outdoors or more than 16 hrs per day	0.5
Extreme	Greater than 50° C or Class H Insulation	Severe dirt or Abrasive dust or Corrosion	0.2

Table 4-3 Construction Multiplier

Construction	Multiplier
Angular Contact or Roller Bearing	0.5
Vertical Motor	0.5
All others	1.0

Table 4-4 Relubrication Amounts

Frame Size		Volume		
NEMA	IEC	Cu. In.	Fluid oz	ml
48-56	80	0.25	0.14	4.0
143-145	90	0.25	0.14	4.0
182-184	110	0.50	0.28	8.0
213-215	130	0.75	0.42	12.5
254-256	160	1.00	0.55	16.0
284-286	180	1.50	0.83	25.0
324-326	200	2.00	1.11	33.0
364-365	225	3.00	1.66	50.0
404-405	250	3.80	2.11	62.0
444-449	280	4.10	2.27	67.0
>449	>280	4.50	2.50	74.0

For regreasing while operating multiply volume by 125%.

4.2.4 LUBRICATION PROCEDURE: (For Motors with Regreasing Provisions)

CAUTION: BEARING DAMAGE WARNING
Added grease must be compatible with the original equipment's grease. If a grease other than those stated in 4.2.1 is to be utilized contact the motor manufacturer. Nameplate information supersedes section 4.2.1 (GREASE TYPE). New grease must be free of dirt. Failure to follow these instructions and procedure below may result in bearing and/or motor damage.

For an extremely dirty environment, contact the motor manufacturer for additional information.

LUBRICATION PROCEDURE:

1. Clean the grease inlet plug or zerk fittings prior to regreasing.
2. (If present) Remove grease drain plug and clear outlet hole blockage.

CAUTION: GREASE DRAIN PLUGGED:
Old grease may completely block the drain opening and must be mechanically removed prior to regreasing. Forcing a blocked drain open by increased greasing pressure may collapse bearing shields and / or force excess grease through the bearings and into the motor.

3. Add grease per Table 4-4
4. Re-install grease inlet and drain plugs (if removed).

WARNING: EXPLOSION HAZARD
Do NOT energize a Hazardous Locations motor without all grease fittings properly installed.

4.2.5 EXAMPLE: LUBRICATION
Assume - NEMA 286T (IEC 180), 1750 RPM Vertical motor driving an exhaust fan in an ambient temperature of 43° C and the atmosphere is moderately corrosive.

1. Table 4-1 list 10,000 hours for standard conditions.
2. Table 4-2 classifies severity of service as "Severe" with a multiplier of 0.5.
3. Table 4-3 lists a multiplier value of 0.5 for "Vertical"
4. (Eq. 4.2) Interval = 10,000 hrs x 0.5 x 0.5 = 2500 hrs

Table 4-4 shows that 1.5 in^3 of grease is to be added.

Relubricate every 2,500 hrs of service with 1.5 in^3 of recommended grease.

4.3 TROUBLE-SHOOTING

WARNING: READ INSTRUCTIONS:
Before trouble-shooting a motor, carefully read and fully understand the warnings, cautions, & safety notice statements in this manual.

WARNING: Hazardous Locations Motor Repair:
Motors nameplated for use in Division 1 Hazardous Locations can only be disassembled, modified or repaired by the plant of manufacturer or a facility that is Listed under UL's category "Motors and Generators, Rebuilt for use in Hazardous Locations". Failure to follow these instructions could result in serious personal injury, death and/or property damage

CAUTION: DISASSEMBLY APPROVAL REQUIRED:
Motor disassembly must be performed by a party approved by the motor manufacturer. To disassemble the motor without approval voids the warranty.

4.3.1 GENERAL TROUBLE-SHOOTING WARNINGS

1. **DISCONNECT POWER TO THE MOTOR BEFORE PERFORMING SERVICE OR MAINTENANCE.**
2. **Discharge all capacitors before servicing motor.**
3. **Always keep hands and clothing away from moving parts.**
4. **Be sure required safety guards are in place before starting equipment.**
5. **If the problem persists contact the manufacturer.**

4.3.2 Motor Trouble-shooting Cause / Corrective Action - Table 4-5

Issue:		Likely Cause:	Corrective Action:
Motor fails to start upon initial installation:			
	A.)	Supply voltage is too low or is severely unbalanced (one phase is low or missing).	(1) Check power supply fuses (2) Match motor lead wiring to nameplate connection diagram and supply voltage (3) Ensure that steady state supply voltage at motor terminals is within limits (see section 3.4.1.3). Correct as needed (4) Obtain correct motor to match actual supply voltage.
	B.)	Motor leads are miswired at conduit box.	
	C.)	Driven load exceeds motor capacity	(1) Verify that motor & load turn freely (2) Disconnect motor from load & ensure motor turns freely. Note: Roller bearings make noise when motor is uncoupled and shaft is rotated (3) Verify that motor starts when disconnected from load (4) Remove excessive / binding load if present.
	D.)	Load is jammed.	
	E.)	Fan guard is bent and making contact with fan	Replace fan guard & fan (if blades are damaged)
	F.)	VFD with power factor capacitors installed	Remove power factor correction capacitors if equipped
	G.)	VFD with motor neutral lead grounded	Ensure that motor neutral lead is ungrounded
	H.)	VFD programmed incorrectly	(1) Repeat checks listed above (2) Verify that VFD current limit and starting boost are set correctly (5) Double-check motor and feedback parameter settings and VFD permissives (6) Repeat autotune (for vector drives) procedure (7) Consult VFD supplier.
Motor has been running, then slow down, stalls, or fails to restart:			
	A.)	Supply voltage has drooped or has become severely unbalanced	(1) Replace fuse or reset circuit breaker. Allow motor to cool down before resetting manual protector on motor. **Warnings** - See section 1.1 for automatic and manual reset protector warnings (2) Verify that rated and balanced supply voltage has been restored before restarting motor. Measure voltage during restart. Ensure that steady state supply voltage at motor terminals is within limits (see section 3.4.1.3).
	B.)	Motor is overloaded	(1) Verify that motor & load turn freely. Repair binding components as needed (2) Reduce driven load to match motor capacity or increase motor size to match load requirements.
	C.)	Motor bearings are seized	
	D.)	Load Is jammed.	
	E.)	VFD will not restart motor after tripping	(1) Check fault codes on VFD and follow VFD troubleshooting procedures (2) Verify that VFD input voltage is balanced and within limits (3) Remove excessive mechanical load if present.
	F.)	Capacitor failure on single phase motor (if equipped)	**Warning: Potential Shock Hazard**: Contact service shop to check capacitor.
Motor takes too long to accelerate:			
	A.)	Motor leads are not connected correctly	Match motor lead wiring to nameplate diagram.
	B.)	Supply voltage has drooped or become severely unbalanced.	(1) Ensure that steady state supply voltage at motor terminals is within limits (see section 3.4.1.3). Correct as needed (2) Obtain correct motor to match actual supply voltage.
	C.)	Load exceeds motor capability	Determine correct motor size and contact motor representative to obtain replacement motor.
	D.)	Faulty start capacitor (Single Phase)	Motor may be too small for load. Record acceleration time. Start capacitors may fail if acceleration time exceeds 3 seconds.
	E.)	Mechanical Failure	(1) Check to make sure motor & load turn freely (2) Disconnect motor from load & ensure motor turns freely
Motor rotates in the wrong direction:			
	A.)	Incorrect wiring connection at motor	[Single Phase] Reconnect motor according to wiring schematic provided. Note: Some motors are non-reversible
			[Three Phase] Interchange any two power supply (phase) leads.
Motor overheats or overload protector repeatedly trips			
	A.)	Driven Load is excessive	(1) If motor current exceeds nameplate value, ensure that driven load has not increased. Correct as needed. (2) If new motor is a replacement, verify that the rating is the same as the old motor. If previous motor was a special design, a general purpose motor may not have the correct performance.
	B.)	Ambient temperature too high	Most motors are designed to operate in an ambient up to 40 °C. (See section 4.2.2 Hot Surface Caution)
	C.)	Motor cooling fins and/or vent openings blocked	Remove foreign materials – clear vent openings, fan guard air inlets and frame fins (TEFC motors)
	D.)	Insufficient Air Flow	TEAO (Totally Enclosed Air Over) motors: Measure airflow next to motor surface and obtain minimum requirements from motor manufacturer.

	E.)	Motor is started too frequently	See section 3.4.5.3
	F.)	Supply voltage too low, too high, or unbalanced	(1) Ensure that steady state supply voltage at motor terminals is within limits (see section 3.4.1.3) Correct as needed (2) Reconnect motor per input voltage (3) Obtain correct motor to match power supply.

Motor Vibrates

	A.)	Motor misaligned to load.	Realign load
	B.)	Load out of balance (Direct drive application)	(1) Ensure that load is dynamically balanced: (2) Remove motor from load and inspect motor by itself. Verify that motor shaft is not bent. Rule of thumb is 0.002" runout for shafts extension lengths up to 3.00". Add 0.0005" per every additional inch of shaft length beyond 3.00".
	C.)	Uneven tension on multiple belts	Mixing new with used belts. Replace multiple belt applications with a complete set of matched belts.
	D.)	Driven load operating at resonant point / natural frequency.	(1) De-energize motor and record vibration as load coasts from 100% speed to 0 RPM. If vibration drops immediately, vibration source is electrical. If levels do not drop immediately, source is mechanical (2) Redesign system to operate below the resonant point (3) On VFD-driven loads, program skip frequencies to bypass resonant points (4) Increase carrier frequency to obtain <3% THD current (5) On variable torque loads reduce volts/hertz below base speed.
	E.)	VFD torque pulsations	(1) Adjust VFD to obtain <3% THD current @ rated motor current (2) Adjust VFD stability for smooth operation. Vector drives may be unstable at light load.
	F.)	Motor miswired at terminal box	Match motor lead wiring to nameplate connection diagram.
	G.)	Uneven, weak or loose mounting support.	Shim, strengthen or tighten where required.
	H.)	Motor bearings defective	Test motor by itself. If bearings are bad, you will hear noise or feel roughness. Roller bearings are normally noisy when operated without load. If sleeve bearing, add oil per nameplate instructions. For motors with regreasing provisions, add grease per relubricating instructions (see section 4.2.3). If noise persists contact warranty service.
	I.)	Motor out of balance	Disconnect from load. Set motor on rubber pads on solid floor. Secure a ½ height key in shaft keyway and energize from balanced power supply @ rated voltage. Record vibration levels and compare with appropriate standards. If excessive vibration persists contact motor manufacturer.

Bearings repeatedly fail.

	A.)	Load to motor may be excessive or unbalanced	(1) If belt drive check system per section 3.3.4. (2) Other than belting, check loading on motor shaft. An unbalanced load will also cause the bearings to fail. (3) Check runouts of mating components, such as a C-face and pump flange.
	B.)	Bearings contaminated.	Motor enclosure not suitable for environment. Replace with correct enclosure construction
	C.)	Incorrect grease or bearings for ambient extremes.	See section 4.2.1
	D.)	VFD bearing damage	Ground brush, common mode filter, or insulated bearings must be added. Contact motor manufacturer.

Motor, at start up, makes a loud rubbing, grinding, or squealing noise.

	A.)	Contact between rotating and stationary components	Belt squeal during across the line starting is normal: (1) Verify that supply voltage is within limits (see section 3.4.1.3). (2) Ensure that motor lead wiring matches nameplate connection diagram: (3) Isolate motor from load. (4) To locate point of contact turn motor shaft by hand. (5) If point of contact is not located contact motor service shop.

Start capacitors repeatedly fail.

	A.)	The motor acceleration time is too long	Motor may be too small for load. Record acceleration time. Start capacitors may fail if acceleration time exceeds 3 seconds.
	B.)	Motor is being started too frequently	Excessive starting will damage motor capacitors. Contact motor manufacturer if motor is started more than 20 times/hour or if acceleration time exceeds 3 seconds.
	C.)	Motor voltage low	Verify that voltage at the motor terminals is within limits (see section 3.4.1.3).
	D.)	Defective start switch inside motor	Motor internal switch failure overheats start capacitor. Contact service shop or motor manufacturer.

Run capacitor fails.

	A.)	High ambient temperature	Verify that the ambient does not exceed motor's nameplate value

	B.)	Input voltage exceeds limit	Verify that voltage to the motor terminals is within limits (see section 3.4.1.3).
	C.)	Power surge to motor (caused by lightning strike or other high transient voltage).	If a common problem, install surge protector.

Safety Instructions

WARNING!

Risk of serious injury or death from electric shock

- Insure that the pump motor is properly grounded prior to starting the pump.
- On pumps equipped with a plug, insure that the ground prong is intact in both the pump plug and any extension cords used to power the pump. Insure that the pump is plugged into a properly grounded receptacle.
- On pumps not equipped with a plug, insure that the green "ground" conductor in the pump power cable is properly grounded at the power supply or control panel per National Electrical Code requirements.
- Do not touch or hold the pump while it is connected to the electrical supply.
- Disconnect the pump from the electrical supply prior to performing any service work.
- Do not allow personnel to enter the water while the pump is running or is connected to the electrical supply. Disconnect the pump from the electrical supply prior to entering the water.
- Do not use the E Series Scavenger pumps in swimming pool applications or in any other application where people or animals may be in the water with the pump.
- In the event that the pump power cable is damaged, disconnect pump from power supply and have the cable replaced by a qualified ABS Service Center or repair shop. Do not operate the pump with a damaged power supply cable.

WARNING!

Risk of serious injury from spinning impeller

- Disconnect pump from power supply prior to performing any service work or adjustments.
- Do not put hands or feet inside pump discharge or suction for any reason.
- Do not check for pump rotation by putting hand or any object into pump discharge or suction.

CAUTION!

Risk of injury during pump handling

- Prior to lifting the pump, insure that the pump lifting device (chain, wire rope, etc) is of suitable strength to lift the pump safely, and is in good condition.
- If the pump is to be lifted by a hoist, insure that the working load rating of the hoist exceeds the weight of the pump, and that the hoist is in good working condition.
- Never lift the pump by the power cable!
- Never work on a pump which is suspended in the air. Set the pump on the ground prior to performing any service or adjustments.
- Never apply power to a pump which is suspended in the air. The start reaction of the motor will cause the pump to spin violently and may cause injury.
- Scavenger pumps are made of cast iron and are heavy. Insure that pumps are handled in a manner that will prevent injury due to back strain, pinched fingers, foot injuries, etc.
- Disconnect pump from power supply prior to performing any service work or adjustments.

CAUTION!

Risk of injury or loss from improper application or installation

- Insure that the Scavenger pump selected is the proper model for the intended application, and that the pump and electrical supply are fully compatible.
- Insure that the Scavenger pump has been properly installed and connected to the power supply prior to starting the pump.
- Do not use the Scavenger pump in applications where people or live animals will be in the water with the pump.
- Do not use the Scavenger pump in highly corrosive environments.
- Consult ABS for assistance with application or installation questions, or with any questions not addressed by this operation & maintenance manual.

TROUBLESHOOTING CHART 15

WARRANTY 16

1.0 INTRODUCTION

1.1 **INTRODUCTION**
This manual was prepared to assist you in the correct installation, operation, and maintenance of your ABS pump. Please read it completely before installing the pump. Make certain that you are familiar with the contents, and that the chapters on installation and operation are fully understood before running the pump.

ABS pumps are designed for minimal maintenance. However, regular checks will ensure longer life and greater operating reliability.

1.2 The SCAVENGER™ series submersible pumps are designed to be used for pumping clean or contaminated water, residential or industrial sewage, or septic tank effluent. All liquids to be pumped must be compatible with the materials of construction of the pump. The pump consists of a fully submersible motor, close coupled to a non-clog type pump end.

1.3 **Warranty:** No repair work should be carried out during the warranty period without prior factory approval. To do so may render the warranty void.

Serial No.: In all correspondence and reports, make certain that the pump model and serial number is given.

2.0 DESIGN OF THE PUMP

2.1 ABS SCAVENGER™ submersible pumps are designed for continuous underwater operation in installations handling liquids containing suspended solids.

The motor and pump form a close coupled, watertight unit capable of operating while submerged to a depth of 65 feet. The squirrel cage induction motor is insulated against heat and moisture in accordance with Class "B" (130º C) regulations on models through 2 horsepower and class "F" (155º C) regulations on models from 3 to 10 horsepower.

The motor chamber is filled with non-toxic di-electric oil. This oil aids in motor heat transfer and lubricates the bearings. It also helps protect the motor from damage in the event of water entry.

The impeller is designed for efficient flow characteristics and clog-free operation.

Three-phase pumps are supplied with the free cable ends.

2.2 Table of Materials

Materials of Construction	
Housing & Volute	Cast Iron
Impeller and Wear Plate	Cast Iron
External Hardware	304 Stainless Steel
Motor Shaft	420 Stainless Steel
Mechanical Seals	Carbon/Ceramic (optional Silicon Carbide)
Bearings	Ball Bearings
Motor Windings	Copper (class B or F depending on model)
Start Switch (1 phase)	Solid State Electronic Switch
Power Cable	Thermoplastic Elastomer (20 ft. standard)
O-rings	Buna-N
Oil	Non-Toxic

3.0 UNPACKING, INSPECTION, AND STORAGE

3.1 ABS pumps are shipped from the factory ready for installation and use. They should be held in storage if the pump station is not complete.

Carefully open the shipping container and remove the pump. Check packing material for spare parts before discarding. Thoroughly inspect the pump for shipping damage. Pay special attention to the power cable, and discharge port threads (if applicable). Report any damage to the shipping carrier. In the event of damage, retain all packing material; it may be required to support a damage claim.

THE ENDS OF THE CABLE MUST BE PROTECTED AGAINST MOISTURE. DO NOT ALLOW THE CABLE ENDS TO COME IN CONTACT WITH WATER OR TO LAY ON THE GROUND OR FLOOR.

3.2 LONG TERM STORAGE

3.2.1 If it is necessary to store a pump for a long period of time, it should be stored indoors in a clean, dry temperature-stable environment. The pump should be left in its shipping container or otherwise protected from dirt and water. *The ends of the cable must be protected against moisture.*

3.2.2 Do not allow the pump to freeze. Water trapped during quality testing may expand and cause damage. If the pump must be stored in subfreezing environment, consult the factory for specific recommendations and precautions.

3.2.3 During storage, the impeller should be rotated a few turns once a month. Rotating the impeller will lubricate the seals and prevent seizing.

3.2.4 Prior to installation, or if the pump has been unused for one month or longer, the impeller should be rotated by hand to ensure the seals are free-spinning.

3.2.5 Installed pumps which are idle for long periods of time should be started and run for a few seconds once a month to lubricate the seals.

3.2.6 Installed pumps which have been idle for longer than one month should be lifted from the wet well before being started. The impeller should be rotated by hand to ensure the seals are free- spinning. The pump should then be reinstalled and started.

4.0 INSTALLATION

4.1 FREE STANDING INSTALLATION

The SCAVENGER™ pump may be installed using it's integrated feet on any hard bottomed tank capable of supporting the weight of the pump. When installed in this manner, the pump stands vertically on its feet, and the discharge of the pump is hard piped from the pump flange to the exit of the wet well. The piping should include all the features shown in figure 4.1 including a coupling device which will allow the piping to be separated in the event the pump must be removed.

The pump should not be installed on a soft bottomed tank (dirt, sand, crushed stone, etc.) If installation on a soft bottomed tank is required, consult factory for a “mud plate” accessory, which must be installed on the pump to prevent it from sinking into the soft bottom.

The pump is designed to be installed with the motor oriented vertically. Consult factory for approval prior to attempting any horizontal mounting of a Scavenger pump.

4.2 GUIDE RAIL SYSTEM INSTALLATION

A guide rail system is a quick disconnect system which allows the pump to be removed from the wet well without disturbing the discharge piping. The guide rail base is anchored to the floor of the wet well and the discharge piping is attached to it.

A coupling bracket is attached to the discharge flange of the pump and allows the pump to slide up and down a guide rail pipe when being removed and installed. When the pump with coupling bracket attached, is lowered onto the guide rail base, the pump discharge seals against the base automatically using a profile gasket or o-ring (see figure 4.2)

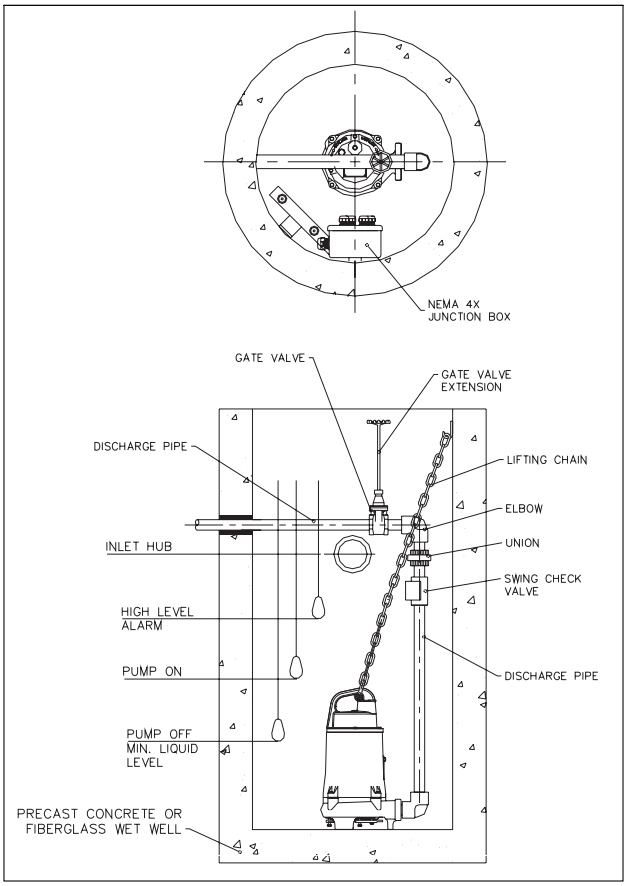

Figure 4-1

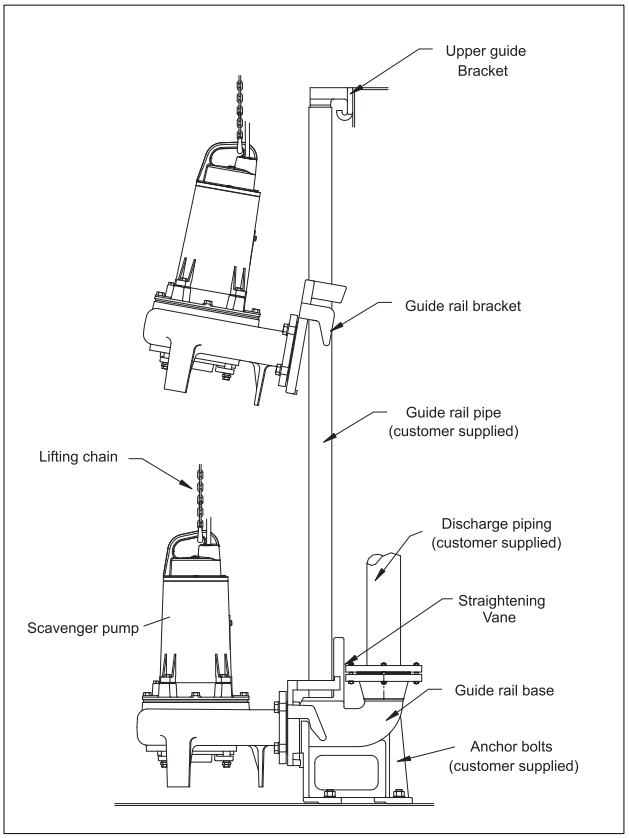

Figure 4-2

4.2.1 Guide Rail Base Anchoring Methods

The preferred method of anchoring the guide rail base to the wet well floor is to use stainless steel stud anchors which are cast into the floor during wet well construction. These can be cast into a concrete floor when the floor is poured, or can be fiberglassed into the floor when using a fiberglass basin. In either case, stud spacing and alignment is critical, and must be carefully controlled so that the guide rail base installation goes smoothly. An alternate anchoring method for concrete wet wells is stud or bolt type anchors which are drilled into the concrete floor after the concrete is cured. These anchors are not as strong as the cast in type, but are suitable as long as they are properly selected and installed.

4.2.2 Guide Rail System Assembly & Installation

To assemble the Automatic Coupling System and to install the Guide Rail Assembly, follow these instructions. (See Figure 4.2)

1. Mount the straightening vane (5) to the guide rail base (6) with screws and spring washer.

   Note: Some guide rail bases have an integrated straightening vane. *In this case, mounting of a bolt on straightening vane is not required.*

2. Install the guide rail base in the bottom of the wet well by means of cast-in anchor bolts (7). Check that the base is level, and insure that the base is positioned such that the guide rail pipe can be installed vertically between the base and upper guide rail bracket. Add grout beneath base to level. Re-check base after grout dries. Finally, secure in place with hex nuts and washers.

3. Position the upper guide bracket to the access cover or to the wall of the opening to determine length of guide rail. The guide rail, which is customer supplied, will be standard galvanized or stainless steel pipe. Pipe size depends on the particular guide rail base being installed. After positioning, cut pipe to the required length.

4. Install the guide rail pipe over the tapered plug of the guide rail base. Pipe should fit snugly over the plug.

5. Insert the upper guide bracket tapered plug into the upper end of the guide rail and locate so the guide rail is plumb. Secure upper guide bracket to the access cover or opening wall and Re-check for plumbness. Check that the guide rail base (6), the guide rail (2), and the upper guide bracket (1) are on the same center line with the discharge connection and vertically aligned. This is necessary to assure that the pump will seal itself correctly. Press upper guide bracket (1) into the guide rail pipe (2) so that no play remains and finally secure the upper guide rail bracket by tightening the screws.

6. The molded profile gasket is placed in the pump bracket so that the thicker or rounded face points towards the guide rail base and the thinner or flat face points toward the pump flange.

   Note: On some profile gaskets, both faces are the same shape and thickness. *In this case, the gasket can be installed either way.*

   The pump bracket is fastened to the discharge of the pump with stainless steel fasteners. The bolts should be equally tightened in a cross-wise manner to prevent leakage of the seal.

7. The station discharge piping is attached to the threaded or flanged discharge connection of the guide rail base.

   Piping should be provided with its own support mechanism so that the guide rail base is not required to support the full weight of the piping system.

4.3 FLOAT SWITCHES

Pumps are controlled by float switches mounted within the pump station wet well. Float switch cables are normally held in place with the float bracket mounted to the access cover frame or pit wall. See Figure 4-3 and 4-4. The floats must be secured so that they will not tangle with each other, catch on pipes, ladders or brackets.

High level Alarm-6 inches above the PUMP ON float.

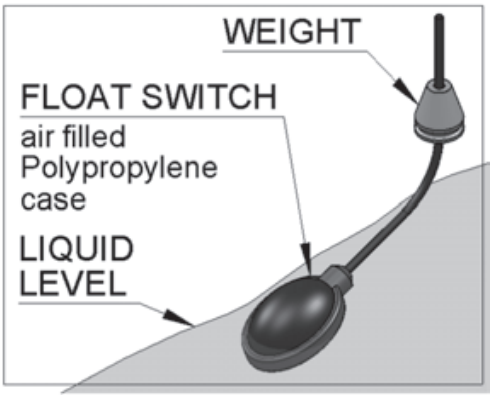

Figure 4-3

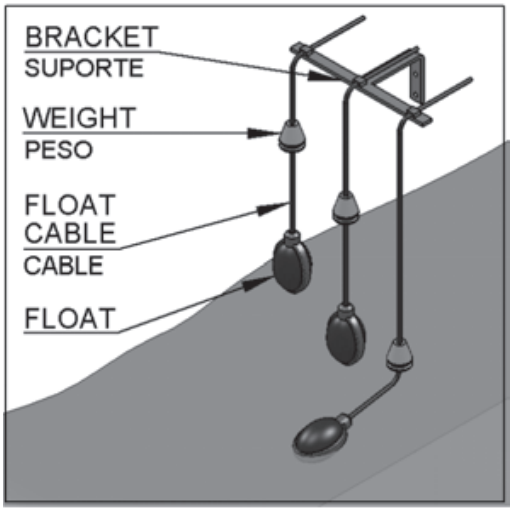

Figure 4-4

4.3.1 FLOAT SEQUENCE

1. As the liquid level in the wet well rises, the "PUMP OFF" float tilts, closing the switch. As the liquid level continues to rise, the "PUMP ON" float tilts. This switch closes, starting the pump.

2. The pump runs until the liquid level falls below the "PUMP OFF" float, emptying the wet well.

3. Duplex pump stations have an additional float for the second or lag pump. If the first pump fails to start or cannot keep up with the inflow and the wet well level continues to rise, the lag float is activated, bringing on the second pump. Both pumps then remain on until the wet well level drops below the off float level.

4. In the event of a malfunctioning float switch, control relay, or pump, the liquid level rises and tilts the "HIGH LEVEL ALARM" float activating the alarm.

4.3.2 FLOAT SWITCH INSTALLATION

The float switch levels will determine the storage volume of the pump station wet well. The storage volume is the main factor affecting the number of pump starts per hour.

Normally, all details of the pump station will be specified by engineering drawings. The drawings will specify the levels for PUMP ON and PUMP OFF floats and the HIGH-LEVEL ALARM float. If the float positions are not specified, the following guidelines for float switch levels will provide proper storage capacity and number of operating cycles for a standard pump station.

SIMPLEX PUMP STATION
Pump OFF-Minimum level at top of motor housing. Pump ON should be 1ft. minimum above pump OFF level. Keep a minimum of 1 ft. below bottom of influent pipe. High level alarm, 6" above lag float.

DUPLEX PUMP STATION
Pump OFF-Minimum level at top of motor housing. Lead pump ON float, minimum 1 ft. above OFF float (greater float spacing leads to fewer starts per hour, and is preferred). Lag float, 6" minimum above lead floats. High level alarm, 6" above lag floats.

If a specific installation cannot adhere to these guide lines, an engineer, the ABS representative, or the factory should be consulted for recommendations.

4.4 PUMP CONNECTIONS

The motor voltage and amp rating of the pump is shown on the nameplate of the pump.

Note: Some pumps are dual voltage or tri-voltage. The voltage for which the motor is connected is shown on a tag attached to the pump handle and on the carton label.

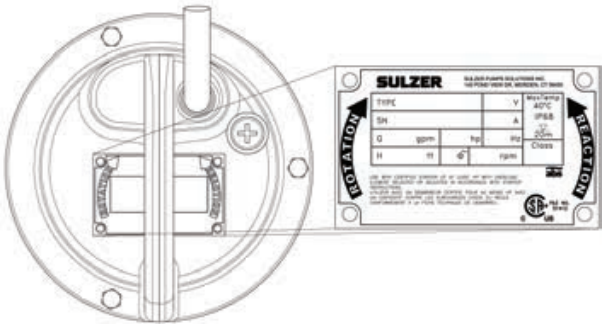
Check that the connected voltage is the same as the supply voltage. The connection of the pump cable leads should be carried out by a licensed electrician in accordance with the identification on the individual leads and the corresponding connections on the control panel. Refer to the Pump Wiring Diagram, Section 8.3.

After installing pump, insure that the power cable is properly secured; led straight up and away from the pump, so that it cannot get caught in the pump, and so that it is not bent and stressed at the point it enters the motor.

5.0 START UP

5.1 IMPELLER ROTATION

1. After the electrical connections are completed, and fully tested, the motor rotation must be checked. Incorrect rotation will result in low flow and can damage the motor.



2. **Rotation.** Check to be sure the impeller is spinning in the proper direction before final installation of the pump. This is especially important with three phase pumps. Proper rotation is clock-wise when viewed from the

top of the pump. Often the easiest method for determining rotation is the "Start Reaction" method. To check rotation this way, place the pump standing upright on the floor. Momentarily energize the power and watch the direction the pump body twists. This twist or "Start Reaction" will be in a direction opposite to the impeller rotation. The start reaction should twist the pump in a counter-clockwise direction when viewed from the top of the pump.

⚠ CAUTION! ⚠

WHEN APPLYING POWER TO PUMP, STAND CLEAR OF THE UNIT TO PREVENT INJURY.

3. If the direction of rotation of a three phase pump is incorrect, disconnect power AHEAD of the control panel. Exchange any two of the motor input power leads at the power supply. This will reverse the rotation. Re-check pump for proper rotation after exchanging leads. If there are multiple pumps in the wet well, check rotation on each pump individually. Consult the factory immediately if a single phase pump runs backwards.

4. Run the pump under normal load, and check the motor amp draw with a clamp-on ammeter. Amp draw should be within the limits stated on the pump nameplate.

⚠ CAUTION! ⚠

PRIOR TO PLACING THE PUMP INTO OPERATION, A PRODUCT START-UP PROCEDURE SHALL BE COMPLETED BY AUTHORIZED PERSONNEL. FAILURE TO COMPLETE THE PRODUCT START-UP REPORT WILL VOID THE WARRANTY. A COPY OF THIS REPORT IS FURNISHED WITH EACH PUMP.

5.2 CURRENT UNBALANCE (three phase only)

After ensuring that the pump is rotating in the correct direction, and the current draw is within specifications, the Amount of current unbalance between phases must be calculated. Run the pump under water, simulating normal operating load conditions. Peform the measurements and calculations of the current unbalance equation. Enter the results of the current unbalance calculation on the Product Start-up Report.

CURRENT UNBALANCE EQUATION

% OF CURRENT UNBALANCE
=
MAX. CURRENT DIFFERENCE FROM AVERAGE CURRENT (X100)

EXAMPLE:

1. MESURE THE CURRENT (IN AMPS) OF EACH PHASE AT THE CONTROL PANEL TERMINAL STRIP.

   T1 = 10.0 *AMPS*
   T2 = 10.5 *AMPS*
   T3 = 10.5 *AMPS*

2. AVERAGE CURRENT

$$\frac{10.0+10.5+10.5}{3} = 10.33\ AMPS$$

3. MAXIMUM CURRENT DIFFERENCE FROM AVERAGE

$$10.33 - 10.00 = .33\ AMPS$$

4. ACTUAL CURRENT UNBALANCE

$$\frac{.33}{10.33}(100) = 3.2\%$$

The current unbalance for this installation is 3.2% which is within specifications.

⚠ CAUTION! ⚠

CURRENT UNBALANCE BETWEEN PHASES SHALL NOT EXCEED 4%. CONSULT THE FACTORY IMMEDIATELY WHEN CURRENT UNBALANCE EXCEEDS 4%. DO NOT OPERATE THE PUMP. THE PERCENT OF CURRENT UNBALANCE IS DEFINED AND CALCULATED IN THE CURRENT UNBALANCE EQUATION. ENTER THE RESULTS OF THE CURRENT UNBALANCE IN THE PRODUCT START-UP REPORT.

6.0 OPERATION & MAINTENANCE

6.1 OPERATION

After the electrical and mechanical installations have been performed, and the Produt Start-Up Report completed, the pump is ready for operation. No operational procedures are required except to apply rated power to the pump. There are no specific shutdown procedures beyond disconnecting the power supply.

6.2 PREVENTATIVE MAINTENANCE

ABS pumps are designed with a minimum number of preventative maintenace checks. These checks are few but will add satisfactory service to the life of the pump. Maintenance checks should be performed at the intervals stated. Severe operating environments will require more frequent checks.

⚠ CAUTION! ⚠

UNDER NO CIRCUMSTANCES SHOULD TOOLS BE APPLIED TO THE PUMP AND MOTOR WITHOUT THE POWER TO THE CONTROL BOX BEING DISCONNECTED AND LOCKED OFF.

6.2.1 Cable Inspection

The cable should be inspected for evidence of chafing, cuts or abrasion whenever the pumps is removed from the wet well. The area where the cable enters the teminal chamber should be examined carefully if damage is found, the cable should be replaced.

6.2.2 Washdown

The accumulation of grease and sludge on the pump and float switches should be washed down at three month intervals to insure proper operation. This can be accomplished by using a high pressure hose. After cleaning the switches should be inspected and checked for proper operation.

6.2.3 Bottom Plate Clearance Adjustment

The SCAVENGER™ E Series pumps utilize the patented ABS Contrablock impeller system with an adjustable wear plate. This system provides superior solids handling ability and allows for easy impeller clearance adjustment for maximum pumping efficiency.

Clearance Adjustment

The wear plate on the bottom of the pump has been factory set during pump manufacture. However, jostiling during shipping can upset this adjustment. Prior to placing the pump in service, it is recommended that this adjustment be checked. This is especially true if the pump is found to be noisy during initial startup. A small amount of noise during initial operation is normal, but excessive noise or binding of the impeller indicates that adjustment is necessary.

To adjust the wear plate, lay the pump on it's side. Note that there are two sets of screws holding the wear plate; one set pulling the wear plate toward the impeller, and one set pushing it away. On some models, the hold down screws are threaded through a hole in the center of the push away screws. Adjusting the screws one quarter turn at a time, move the wear plate away from or toward the impeller to set the proper impeller clearance. The clearance is set properly when the impeller can be rotated freely, but the gap between the bottom of the impeller and wear plate is at a minimum. A small amount of contact between the impeller and wear plate is considered acceptable. Use care to insure that the wear plate is adjusted evenly against the impeller.

6.3 LUBRIATION

Internal pump components are lubricated during manufacture and do not require additonal lubrication.

7.0 MAINTENANCE

7.1 MAJOR REPAIRS

Major repair tasks such as bearing, stator or motor shaft replacement should be performed only by ABS factory personnel or a technician trained by the ABS service department.

7.2 CABLE REPLACEMENT

The power cable is epoxy potted into the pump lid at the factory to guarantee a perfect seal. It is recommended that the ABS Service Dept. be contacted in the event a replacement cable assembly is required.

7.3 PARTS

For cross sectional drawings and part lists, please visit our website. You may also call or fax ABS to request this information. Be sure to include your pump model number in your request.

NOTE

If water is found in the motor chamber, the pump must be fully disassembled and major overhaul is required. This should only be performed by an ABS certified technician.

8.0 INTERNAL MOTOR CONNECTION

8.1 WIRE SIZE

All models must be wired to conform to the National Electric Code. Insure that the wire feeding the pump and control is of adequate size and rating for the full load amps of the motor.

8.2 WIRING

Check metal nameplate on unit to verify proper model, voltage and phase for which the unit is to be used; be sure they agree.

8.3 MOTOR VOLTAGE CHANGE

The operating voltage of 208-230/460 three phase models can be changed between 208-230 and 460 by reconnecting wires under the pump lid. Reconnection should be carried out by a qualified mechanic familiar with the wiring of electric motors. When removing the lid and changing the connections, insure that no dirt, debris, or wire slivers are allowed to drop into the motor.

8.3.1 Small Frame Scavengers (1-2 HP)

1. Winding connections are made using crimp connectors to join wires.
2. Note the position of the lid, then remove the lid and separate the quick connectors connecting the lid wires to the motor. Set the lid aside.
3. Using the appropriate wiring diagram on the next page, verify the present voltage connection by determining which wires are paired up with crimp connectors.
4. Cut the wires loose from the crimp connectors, being careful not to lose the wire markers.
5. Strip an appropriate amount of insulation back from each wire, and pair up the proper wires using new crimp connectors.
6. Verify that the proper wires are paired.
7. Clean the mating surface of the motor housing and lid. Clean and inspect the lid o-ring and set it in the groove on the motor housing.
8. Reconnect the wires from the lid to the motor and reinstall the lid being careful not to pinch any wires.

8.3.2 Large Frame Scavengers (3-10 HP)

The voltage change procedure is the same as for the small frame scavengers except no cutting of wires is necessary. Wire connections are made by pairing appropriate wires on the terminal board. In the 208-230 volt configuration, jumpers are required between certain terminal posts. Jumpers are available from ABS, or 12 gauge solid copper wire can be used.

8.3.3 Single Phase Scavengers

The single phase EF05W-1H can be connected internally for either 115V or 230V.

All other single phase pumps can be connected for only 230V.

To reconnect the EF05W-1H pump for a different voltage, follow the same basic instructions as for the small frame three phase pumps, while using the appropriate single phase diagram shown on the next page. Be certain to make all the proper connections to the capacitor, start switch, and thermal overload shown in the diagram.

If changing a 115V pump to 230V, the plug on the end of the cord must be removed.

If changing from 230V to 115V, a plug may need to be added. After reconnecting pump, verify proper pump rotation prior to installation. If pump turns in the incorrect direction, exchange wires 5 & 8 to reverse rotation.

9.0 MONITORING SYSTEM

9.1 Aplication

The supervisory system is optional and can be applied to the pumps EJ10W until EJ 100D.

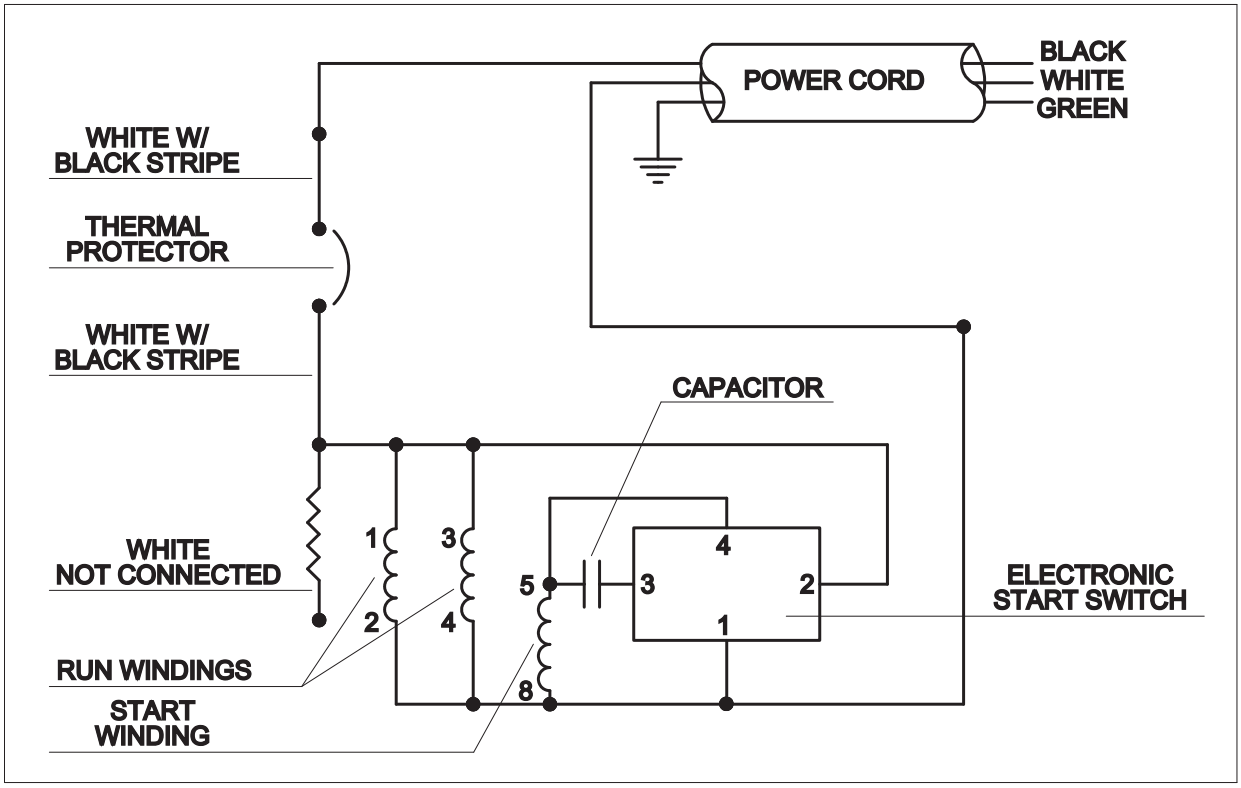
9.2 PROTECTION

A di-electrode, installed in the oil chamber, gives an early warning when moisture entered through the lower sealing.

Thermal protectors enclosed to the motor windings protect the motor against overheating.

The EJ 10W up to EJ 20W pumps, have an internal thermal protector. For these pumps, only a di-electrode is installed in the oil chamber and has to be wired to the control panel.

Wiring Diagrams



115V Single Phase Wiring Diagram.
Applies to 1/2 horsepower single phase models only.

Blank

Troubleshooting Chart

SYMPTOM	POSSIBLE CAUSE	ACTION
1. PUMP WILL NOT START	A. Power supply failure	A. Check Power Supply Check electrical system for loose connections Check operating voltage between the three power lines-three phase Check operating voltage between terminals L1 and L2-single phase.
	B. Burned-out fuse or tripped circuit breaker	B. Check circuit protectors, reset circuit breakers
	C. Damaged power cable	C. Check external cable for damage - repair
	D. Level switch failure	D. Check level switches
	E. Jammed impeller	E. Inspect and remove jamming object
	F. Water inside motor	F. Refer to symptom 8
	G. Foreign matter build-up	G. Clean floats carefully
2. REPEATED TRIPPING	A. Circuit protection underrated	A. Check rating and replace with proper size
	B. Phase current unbalance	B. Check amp draw
	C. Pump connected to incorrect voltage	C. Verify connections. See wiring diagram
	D. Wet or Damaged wiring	D. Inspect external cable, replace if worn or damaged.
	E. Obstruction in pump	E. Remove obstruction
	F. Incorrect rotation	F. Check rotation per Section 5.1
	G. Shorted motor	G. Check motor for shorts using a megger
IF SYMPTOMS CONTINUE, CONSULT ABS PRODUCT SERVICE DEPARTMENT		
3. PUMP RUNS IN “HAND” BUT NOT IN AUTOMATIC MODE	A. Bad “OFF” float switch	A. Install wire jumper between “OFF” switch terminals. If pump starts to run replace the “OFF” float switch.
	B. Bad “ON “ float switch	B. Install wire jumper between “ON” float terminals. If pump starts to run replace the “ON” float switch.
4. PUMP WILL NOT SHUT OFF	A. Float switch failure	A. With power off, check float switches for continuity.
	B. Control panel failure	B. Check control panel schematic drawing
5. HIGH LEVEL ALARM DOES NOT COME ON	A. Faulty high level alarm switch	A. Install wire jumper between alarm terminals. Replace high-level alarm float switch.
6. LOW FLOW	A. Incorrect pump rotation	A. Check rotation per Section 5.1
	B. Liquid level in pit too low,	B. Check liquid level and location of level switches.
	C. Obstruction in pump or piping	C. Remove obstruction.
7. WATER IN OIL CHAMBER	A. Loose or damaged oil plug	A. Check plug - replace
	B. Mechanical Seal Failure	B. Visit ABS website for instructions.
8. WATER INSIDE MOTOR CASING	A. Damaged upper lip seal or mechanical seal	A. Visit ABS website for pump rebuilding instructions.
	B. Damaged O-ring between oil chamber and motor casing.	B. Replace O-ring
	C. Cut in jacket of power cable	C. Inspect and replace as necessary
	D. Water wicking down power cable from wet well junction box	D. Dry and reseal junction box. Replace power cable.

Refer to order code in acknowledgement of order, in invoice and on packaging to identify equipment.	Zur korrekten Identifikation auf den Bestellcode in der Auftragsbestätigung, in der Rechnung und auf der Verpackung Bezug nehmen.	Pour identifier correctement l'équipement, vous devez vous référer au code qui se trouve sur la confirmation de commande, sur la facture et sur la plaque qui se trouve sur l'emballage.	Per una corretta identificazione della macchina, bisogna fare riferimento al codice che si trova sulla conferma d'ordine, sulla fattura e sulla targhetta posta sull'imballo.
CONTRA-INDICATIONS If the user observes normal precaution (typical of this type of machine) together with the indications of this manual, work is safe. NOTE FOR FOOD GRADE MICRO-FEEDERS Clean micro-batch feeder with water from time to time. Cleaning frequency depends on type of product and plant. In cleaning certain feeder parts such as the body, the metering screw, the outlet pipe and the protections, special care must be taken. Before using any other than water for cleaning, contact a WAM® sales office. If material is acid or temperature is extremely high or low also contact a WAM® sales office.	**KONTRA-INDIKATIONEN** Sofern der Betreiber die für Geräte dieser Art typischen Vorsichtsmaßnahmen zusammen mit den in dieser Dokumentation enthaltenen Vorschriften beachtet, ist die Betriebssicherheit gewährleistet. BETRIFFT MIKRODOSIERER FÜR NAHRUNGSMITTEL Dosierer regelmäßig mit Wasser abwaschen (Häufigkeit abhängig von Produkt und Anlagentyp). Besonders bei der Reinigung von Gehäuse, Dosierwerkzeug, Ablaufrohr und Schutzvorrichtungen mit Vorsicht vorgehen. Bevor Reinigungsmittel egal welcher Art verwendet werden, bei einem WAM®-Verkaufsbüro Informationen in bezug auf die Verträglichkeit einholen. Ist das Produkt säurehaltig oder dessen Temperatur entweder sehr hoch oder sehr niedrig, ebenfalls mit einem WAM®-Verkaufsbüro Kontakt aufnehmen.	**CONTRE-INDICATIONS** Si l'utilisateur observe les précautions normales pour ce type de machine et les instructions contenues dans ce catalogue l'utilisation est sûre. NOTE POUR MICRODOSEURS ALIMENTAIRES Nettoyer le microdoseur périodiquement avec de l'eau (fréquence dépend du type de matériau et du type d'installation). Utilisez du soin particulier pour le corps, l'outil de dosage, la sortie verticale et les protections. Avant d'utiliser des autres produits au lieu de l'eau contactez un bureau de vente WAM®. Le même vaut si le matériau est acide ou sa température est trop élevée ou trop basse.	**CONTROINDICAZIONE** Se l'utilizzatore osserva le precauzioni normali tipiche per questo tipo di macchina insieme alle indicazioni date in questo catalogo l'utilizzo è sicuro. NOTE PER MICRODOSATORI PER USO ALIMENTARE Lavare il microdosatore periodicamente con acqua. La frequenza dipende dal tipo di materiale e della natura dell'impianto. Certe parti come il corpo, l'utensile di dosaggio, lo scarico verticale e le protezioni vanno puliti con particolare cura. Prima di utilizzare altri prodotti per la pulizia contattare il ns. Ufficio Vendite. Anche se il materiale da dosare fosse acido o avesse una temperatura troppo alta o troppo bassa, contattare il ns. Ufficio Vendite.
The equipment must not be put into service before the machine or plant it has been fitted to has been declared in conformity with the regulations of the directive 14/06/1982 (89/392/ECC).	Das Gerät darf nicht in Betrieb genommen werden, bevor die Anlage oder Maschine, in die er eingebaut wurde mit den Vorschriften der Bestimmungen vom 14.06.1982 (89/392/ECC) als konform erklärt wurden.	Il est interdit de mettre en fonction la machine avant que l'installation dans laquelle elle doit etre installée soit déclarée conforme aux dispositions de la directive 14/06/1982 (89/392/ECC).	E' inoltre vietato mettere in funzione la macchina prima che la macchina/impianto nel quale devono essere installate sia dichiarato conforme alle disposizioni della direttiva 14/06/1982 (89/392/EEC).
For dangerous materials, i.e. those that must not get in contact with the human body or be inhaled, for flammable, explosive and bacteriologically dangerous materials the plant manufacturer or fitter must provide for the required safety devices and measures.	Für Gefahrenprodukte, bzw. solche, die nicht mit dem menschlichen Körper in Kontakt geraten oder eingeatmet werden dürfen, für leicht entzündbare, explosive sowie bakteriologisch gefährliche Medien muß der Anlagenbauer bzw. –errichter die für die Sicherheit erforderlichen Vorrichtungen vorsehen und Maßnahmen treffen.	Pour des produits dangereux, nuisibles au contact et/ou à l'inhalation, inflammables, explosifs et dangereux du point de vue bactériologique et/ou viral, le constructeur de l'installation ou l'installateur devront prévoir des dispositifs appropriés au besoin.	Per prodotti pericolosi, nocivi al contatto e/o all'inalzione, infiammabili, esplosivi e pericolosi dal punto di vista batteriologico e/o virale, l'impiantista e/o l'installatore, dovranno prevedere idonei dispositivi all'uopo.
It is the plant designer's / plant fitter's responsibility to design and install all necessary protection in order to avoid that breaking and/or yielding of the equipment or of parts of it might damage people and/or parts of the plant (e.g. adequate protection against falling down of the motor etc.).	Es liegt in der Verantwortung des Anlagenplaners bzw. –aufstellers, alle notwendigen Schutzvorrichtungen vorzusehen, welche es verhindern, dass durch einen Geräte- oder Teiledefekt Personen- und/oder Sachschäden verursacht werden (z.B. geeigneter Schutz gegen das Herunterfallen des Motors etc.).	Dans ce cadre il est la responsabilité du constructeur de l'installation ou de l'installateur de projeter et d'installer tout équipement de protection nécessaire afin d'éviter que des ruptures et/ou des tassements de la machine et/ou des parties d'elle puissent causer de dégâts à des personnes et/ou des choses (par ex.: des protections appropriées contre la chute du moteur etc.).	In quest'ambito è cura dell'impiantista/installatore predisporre ed installare tutti gli accorgimenti/protezioni al fine di evitare danni a cose o persone in caso di rotture e conseguente caduta di pezzi della macchina (ad es: rottura del motore).

RECEIPT OF GOODS / PACKAGING DATA

On arrival, prior to unloading, check if nature and quantity of the goods comply with the contents of the delivery note, the invoice and the acknowledgement of order.

If any parts are damaged through transport immediately state your claims in writing on the consignment note (waybill). The driver is obliged to accept this and to leave you a copy. Send off your claims without hesitation to us if you received goods free destination or to your shipping agent. Failure to state your claims on arrival of the goods may later invalidate your claim.
Avoid any kind of damage to goods during unloading and handling.
Always handle goods with care.

N. B.: The weights given below do not include any additional packaging such as pallets or similar.

KOLLIMASSE UND GEWICHTE

Bei Wareneingang vor dem Ab-Laden prüfen, ob Ware in Be-schaffenheit und Menge mit den Angaben auf Lieferschein, Rechnung und Auftragsbestätigung übereinstimmt. Eventuelle Schäden sofort schriftlich im Frachtbrief reklamieren, da spätere Ansprüche nicht mehr geltend gemacht werden können. Der Fahrer ist dazu verpflichtet, die Reklamation entgegen zu nehmen und dem Empfänger eine
Kopie dieser zu überlassen. Bei Lieferung frei Haus Reklamation an den Lieferanten schicken, in allen anderen Fällen an den Spediteur. Beim Abladen Ware nicht beschädigen. Berücksichtigen, daß es sich um mechanische Teile handelt, die mit Vorsicht zu behandeln sind.

N.B.: Gewichte beinhalten keine zusätzlichen Verpackungen wie Paletten o.ä.

EMBALLAGES - POIDS

Au moment où Vous recevez la marchandise, vérifiez bien que le modèle et la quantité correspondent aux données indiquées sur le bulletin de livraison, sur la facture et sur la confirmation de commande.
Si vous constatez des dommages, vous devez immédiatement le faire savoir en l'écrivant dans l'emplacement prévu à cet effet sur la lettre de voiture. Le chauffeur a l'obligation d'accepter votre réclamation et de vous en laisser une copie. Si la fourniture a été livrée franco destination, envoyez-nous votre réclamation, sinon, envoyez-la directement au transporteur. Si vous ne réclamez les dommages immédiatement après avoir reçu la marchandise, votre réclamation risque de ne pas être acceptée. Veillez à ne pas endommager la marchandise durant le déchargement et la manutention. Faites toujours extrèmement attention quand vous la deplacez.

N.B.: Les données ci-dessous ne comprennent pas le poids d'un éventuel emballage supplémentaire (palette ou autre).

TRASPORTO E RICEVIMENTO

Al ricevimento della merce controllare se la tipologia e la quantità corrispondono con i dati di bolla di consegna, fattura e conferma d'ordine.
Eventuali danni devono essere fatti presenti immediatamente per iscritto nell'apposito spazio della lettera di vettura. L'autista è obbligato ad accettare un tale reclamo e lasciarne una copia a Voi.
Se la fornitura è franco destino, inviate il Vs. reclamo a noi, altrimenti direttamente allo spedizioniere.
Se non richiederete i danni immediatatamente all'arrivo della merce, la vostra richiesta potrebbe non essere accolta.
Evitate ogni tipo di danneggiamento durante lo scarico e le movimentazioni.
Movimentate sempre la merce con cura.

N.B.: I dati riportati non comprendono il peso di un eventuale imballo cumulativo (pallet o altro).

Type	WEIGHTS - *GEWICHTE* - POIDS - *PESI* (kg)			
	Without speed variator *Ohne Regelgetriebe* Sans variateur *Senza motorizzazione*	With speed variator *Mit Regelgetriebe* Avec variateur *Con motovariatore*	Max. weight of accessories *Maximalgewicht Zubehör* Poids max. accessoires *Peso max. accessori*	Packing *Verpackung* Emballage *Imballo*
MBF 042	20	26	25	20
MBF 073	60	80	50	30
MBF 114	65	85	50	30

Total weight is given by weight of micro-batch feeder (with or without speed variator) plus accessories and packaging.

Gesamtgewicht = Gewicht des Mikrodosierers (mit oder ohne Regelgetriebemotor) + Zubehör + Verpackung.

Le poids total est donné du poids du microdoseur (avec ou sans motovariateur) plus les accessoires éventuels et l'emballage.

Il peso complessivo è dato dal peso del microdosatore (con o senza motovariatore) più gli eventuali accessori e l'imballo.

(*) Weight with standard MBF
Gewicht mit Standard MBF
Poids avec MBF std.
Peso con MBF std.

INSTALLATION
The micro-batch feeder is ready for operation. Prior to delivery, it has been tested at the factory.

PREPARATION
Remove equipment from packaging.

ASSEMBLY
The MBF units are despatched with the following parts not assembled:
- motors
- metering screws
- blending tools
- accessories

Procedure:
• unpack
• check supply is complete and in compilance with the order
• assemble metering screw

EINBAU
Der Dosierer ist bereits betriebsbereit und wurde vor der Auslieferung im Werk einem vollständigen Funktionstest unterzogen.

VORBEREITUNG
Gerät auspacken und zusammenbauen.

MONTAGE
Folgende Teile werden unmontiert geliefert:
- E-Motoren
- Dosierwerkzeuge
- Homogenisierwerkzeuge
- Zubehör

Vorgehensweise:
• Gerät auspacken
• Sicherstellen, daß Lieferung vollständing ist
• Dosierwerkzeug montieren

INSTALLATION
Le doseur ne nécessite d'aucun contrôle particulier, puisqu'il est fourni déjà complet et testé dans l'usine.

PREPARATION
Enlevez le doseur de l'emballage et commencez l'assemblage.

ASSEMBLAGE
Les microdoseurs sont fournis avec les éléments suivants non assemblés:
- moteurs
- outil de dosage
- homogénéisateur
- accessoires

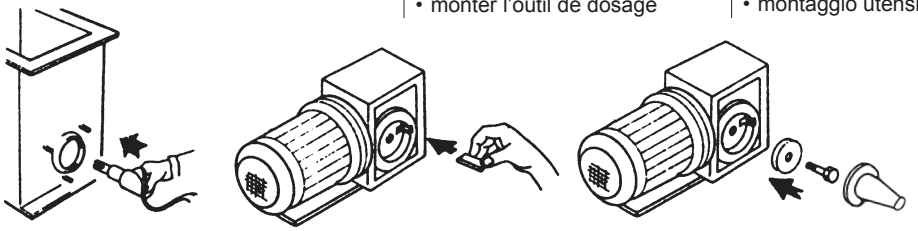
Opérations à effectuer:
• enlever le microdoseur de l'emballage
• vérifier et contrôler la correspondance de tous les composants commandés
• monter l'outil de dosage

INSTALLAZIONE
I dosatori non richiedono particolari accorgimenti, in quanto la macchina viene fornita già completa e collaudata prima della consegna

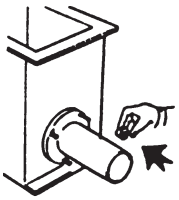
PREPARAZIONE
Togliere il dosatore dall'imballo e provvedere all'imballaggio

ASSEMBLAGGIO
I dosatori vengono consegnati con le seguenti parti non montate:
- motore
- utensile dosaggio
- accessori

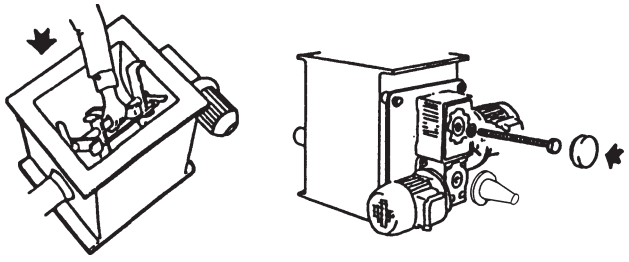
Operazioni da effettuarsi per un corretto assembiaggio:
• togliere il dosatore dall'imballo
• verificare presenza e corrispondenza di tutti i componenti ordinati.
• montaggio utensile dosaggio



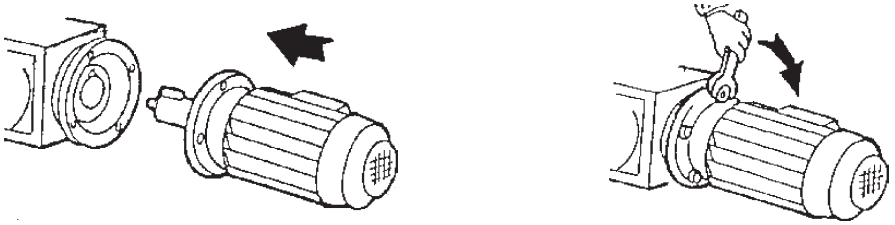
• ASSEMBLE FEEDER PIPE | **• DOSIERROHR MONTIEREN** | **• MONTER LA SORTIE** | **• MONTAGGIO SCARICO**



• ASSEMBLE BLENDING TOOL | **• HOMOGENISIERWERKZEUG MONTIEREN** | **• MONTER L'HOMOGÉNÉISATEUR** | **• MONTAGGIO UTENSILE DI OMOGENEIZZAZIONE**



• ASSEMBLE MOTORS (SPEED VARIATORS) | **• E-MOTOREN UND, SOFERN VORHANDEN, REGELANTRIEB MONTIEREN** | **• MONTER LES MOTEURS (ÉVENTUELS VARIATEURS)** | **• MONTAGGIO MOTORI (EVENTUALI VARIATORI)**



ASSEMBLE ACCESSORIES
- Fix micro-batch feeder to the ground or to a support structure using bolts.
- Check metering screw has been assembled correctly.
- Connect the electrical components to the central control panel or fit it in situ.
- Check sense of rotation of metering screw is ANTI-CLOCKWISE seen from be-hind the drive unit and the blending tool clockwise.
- Once carried out the above-mentioned steps, the micro-batch feeder is ready for the final check.

ZUBEHÖR MONTIEREN.
- Den Dosierer am Boden oder an der Rahmenkonstruktion mittels Schrauben befestigen.
- Prüfen, ob Dosierwerkzeug ordnungsgemäß montiert ist.
- Die elektrischen Komponenten an die zentrale Steuerungseinheit anschließen oder vor Ort einpassen.
- Sicherstellen, daß sich von hinter dem Antrieb stehend geshen das Dosierwerkzeug GEGEN DEN UHRZEIGERSINN dreht und dass das Homogenisierwerkzeug im Uhrzeigersinn drehen.
- Nach erfolgter Durchführung der vorgenannten Arbeiten ist der Dosierer bereit für eine letzte Kontrolle.

MONTER LES ACCESSOIRES
- Fixez le doseur à la structure de soutien au moyen de boulons à travers les trous prévus à ce propos.
- Contrôlez l'assemblage de l'outil de dosage.
- Connecter les composants électriques au panneau de commande central ou situé sur place.
- Contrôlez que vu de derrière la motorisation l'outil de dosage tourne AU SENS INVERSE DES AIGUILLES D'UNE MONTRE et l'outil de mélange dans le sens horaire.
- Exécutées les opérations indiquées ci-dessus, le microdoseur est prêt pour le contrôle final.

MONTAGGIO ACCESSORI
- Fissare il dosatore alla struttura di sostegno mediante viti da applicarsi nelle apposite sedi.
- Controllare il montaggio dell'utensile omogeneizzatore e dell'utensile dosaggio.
- Collegare le parti elettriche al quadro di comando centrale o posizionato in loco.
- Controllare che, rispetto ad un osservatore posto al lato del carico della macchina (retro), l'utensile di dosaggio ruoti in senso ANTIORARIO e l'utensile di omogenizzazione in senso orario.
- Eseguite le suddette operazioni, il dosatore è pronto per il collaudo finale.

ELECTRICAL CONNECTION
Connection between the feeder motor and mains supply, as well as all work on the open terminal box must be carried out by qualified personnel only.
PRIOR TO ANY KIND OF MAINTENANCE OR REPAIR WORK, DISCONNECT FEEDER MOTOR FROM THE MAINS!
Prior to connection ensure voltage supply and motor plate data match.
The protection of the junction box of the electric motor is IP 55.
Check the earthing connections of the machine.
The installer shall connect the machine to the earthing of the plant by means of a copper braid (not included in the standard supply) fitted to the fixing bolt; check the effectiveness of the earthing between the machine and the components of the plant connected to it. Always follow the safety standards.

ELEKTRISCHER ANSCHLUSS
Der Anschluß des Dosierermo-tors an das Netz sowie Arbeiten am Klemmenkasten des Dosierermotors im allgemeinen dürfen nur vom Elektriker ausgeführt werden.
VOR WARTUNGS- UND REPARATURARBEITEN IMMER DIE HAUPTSTROMZUFUHR UNTERBRECHEN!
Vor dem elektrischen Anschluß sicherstellen, daß die Netzspannung mit den Typenschildangaben des Dosierermotors übereinstimmen.
Die Schutzart des Elektromotor-Klemmenkastens ist IP 55.
Die Erdung der Maschine überprüfen.
Der Installateur sollte die Maschine unter Verwendung eines Kupfergeflechts (nicht im Standard-Lieferumfang enthalten), das an einem Schraubbolzen befestigt ist, an die Erdung der Anlage anschließen.
Die Funktion der Erdung zwischen Maschine und den anderen Anlagenkomponenten überprüfen, mit denen die Maschine verbunden ist. Dabei immer die Sicherheitsrichtlinien einhalten.
In jedem Fall die Allgemeinen Arbeitssicherheitsbestimmungen befolgen.

BRANCHEMENTS
La connexion entre le moteur et le réseau et, en tout cas, tout travail sur la boîte à bornes du moteur doit être effectué par du personnel spécialisé.
AVANT DE CHAQUE INTERVENTION DETACHER L'ALIMENTATION DE COURRANT!
Avant le branchement s'assurer que le voltage du réseau coïncide avec celui indiqué sur la plaquete du moteur.
La protection de la boîte a bornes du moteur électrique est IP 55.
Vérifier les connexions de mise à la terre de la machine.
L'installateur doit brancher la machine à la mise à la terre de l'installation au moyen d'une tresse en cuivre (non comprise dans la fourniture standard) inserée dans le boulon de fixation; avant de démarrer la machine, vérifier l'efficacité de la mise à la terre entre la machine et les composants de l'installation branchés sur celle-ci.
Faire toujours attention aux normes de sécurité.

COLLEGAMENTI
Il collegamento tra i motori del microdosatore e la rete elettrica e in ogni caso qualsiasi lavoro sulla scatola morsettiera dei motori, devono essere eseguiti da personale specializzato.
PRIMA DI QUALSIASI OPERAZIONE STACCARE L'ALIMENTAZIONE DI CORRENTE!
Prima del collegamento assicurasi che il voltaggio di rete coincida con quello indicato sulla targhetta del motore.
La protezione della morsettiera motore elettrico è IP55.
Verificare l'equipotenzialità della macchina.
L'installatore dovrà collegare la macchina al circuito di terra dell'impianto utilizzando una treccia di rame, non in dotazione, inserita nel bullone di fissaggio e verificarne l'effettiva equipotenzialità tra macchina e i componenti dell'impianto a contatto con le sue parti prima di avviare la macchina.
Fare sempre attenzione alle eventuali norme di sicurezza.

SAFETY NOTICE
Never introduce hands into a running micro-batch feeder.
Never open the inspection hatch when the feeder is running.
It is however necessary fitting upstream the machine a fix safety grid or a hopper high enough to prevent damages to limbs according to the Machine Directive in force. The same approach is necessary for the outlet: it is required using a vertical outlet or similar systems meant to prevent foreign bodies from entering the machine and cause damage to it, to persons or to their limbs. Always ensure the Machine Directive in force is being followed.

SICHERHEITS-HINWEIS
Niemals mit den Händen in den laufenden Mikrodosierer greifen.
Niemals die Inspektionsklappe öffnen, wenn der Dosierer in Betrieb ist.
Es ist notwendig, vor der Maschine ein Sicherheitsgitter oder ein Behälter mit adäquater Höhe zu installieren, um entsprechend der geltenden Maschinenrichtlinie Verletzungen an Gliedmaßen vorzubeugen.
Gleiches gilt auch für die Absicherung des Auslaufs: Es ist notwendig einen vertikalen Auslauf oder ähnliches zu verwenden, um zu verhindern, dass Fremdkörper in die Maschine gelangen können, die die Maschine schädigen oder das Personal verletzen könnten.
Stellen Sie zu jeder Zeit sicher, dass die momentan geltende Maschinenrichtlinie stets eingehalten wird.

PRECAUTIONS GENERALES
Jamais mettre les mains à l'intérieur du microdoseur pendant qu'il est en fonction.
Jamais ouvrir la trappe de visite quand le doseur est en fonction.
Il est toutefois nécessaire de monter au-dessus de la machine une grille de sécurité fixe ou une trémie suffisamment haute pour prévenir les dommages aux membres inférieurs, selon la directive européenne en vigueur. La même approche est nécessaire pour la bouche de sortie: il faut utiliser une sortie verticale ou des systèmes similaires destinés à empêcher les corps étrangers d'entrer dans la machine et causer des dommages à celle-ci ou blesser les personnes. Assurez-vous que la directive européenne en vigueur est respectée.

PRECAUZIONE GENERALI
Mai mettere le mani all'interno del microdosatore mentre è in funzione. Mai aprire lo sportello di ispezione quando il dosatore è in funzione.
In ogni caso é necessario che sopra la macchina venga montata una griglia di sicurezza fissa o una tramoggia che sia di altezza sufficiente ad impedire che gli arti di una persona vengano danneggiati nel rispetto della Direttiva Macchine Vigente
Lo stesso discorso vale per lo scarico: é necessario usare lo scarico verticale o un sistema equivalente che protegga da eventuali intrusioni che possano pregiudicare il funzionamento della macchina o danneggiare persone o loro arti.
Verificare idoneità dei sistemi in accordo alla Direttiva Macchine in vigore.

START-UP
Check whether foreign substances or water have entered the micro-batch feeder. In such a case clean thoroughly.
Avoid any friction between the metering screw and the body.
Check sense of rotation of metering screw is ANTICLOCKWISE seen from behind the drive unit.
Check oil level in gear reducer is correct.
Check to ensure, with batch feeder in stainless steel, that the inspection hatch is closed.
First start-up must be carried out with empty micro-batch feeder. If feeder operates correctly add material and proceed with regular operation.

INBETRIEBNAHME
Prüfen, ob Fremdkörper oder Wasser ins Innere des Dosierers gedrungen sind. Ist dem so, gründlich säubern.
Jede übermäßige Reibung zwischen Dosierwerkzeug und Gehäuse vermeiden.
Sicherstellen, daß sich das Dosierwerkzeug gegen den Uhrzeigersinn dreht (aus der Sicht hinter dem Antrieb). Bei falscher Drehrichtung Kabeldrähte umklemmen.
Ölstand im Getriebe prüfen.
Sicherstellen, dass beim Dosierer aus Edelstahl die Inspektionsklappe verschlossen ist.
Probelauf mit leerem Dosierer durchführen. Material zugeben und regulären Betrieb aufnehmen.

MISE EN MARCHE
Vérifiez qu'aucune substance externe ou de l'eau ne soient entrées dans le microdoseur. S'il y en a, nettoyez.
Evitez absolument toute friction entre l'outil de dosage et le corps.
Contrôlez le sens de rotation de l'outil de dosage (sens inverse de celui des aiguilles d'une montre); si erronné, invertir le branchement des fils dans la boîte à bornes du moteur.
S'assurer que le niveau d'huile dans le réducteur soit correct. S'assurer, dans le doseur en inox, que la trappe de visite est fermée.
La première épreuve de mise en marche doit être faite à microdoseur vide. Si tout fonctionne régulière-ment, alimenter le doseur avec du matériau et procéder normalement.

AVVIAMENTO
Verificare se sostanze esterne o acqua sono entrate nel microdosatore. Se così fosse, pulire.
Evitate assolutamente ogni frizione tra spirale e dosatrice e dell'omogeneizzatore contro la parte esterna.
Controllare il senso di rotazione dell'utensile di dosaggio (antiorario visto dal carico); se errato, invertire i poli del motore.
Assicurarsi che l'olio del riduttore sia al livello giusto. Accertarsi, nel dosatore in AISI, che sia chiuso lo sportello d'ispezione.
La prima prova di avviamento deve essere fatta a microdosatore vuoto; se tutto funziona regolarmente, alimentare con il materiale e procedere normalmente.

OPERATION

I Depending on the type of plant, operation of the micro-feeder is controlled by a central control panel or by a local starter.
It is essential having knowledge regarding the weight of the product laid on the top of the micro-batch feeder as the former cannot exceed the max. resistance of the inner casing and also it must not generate abnormal flexion of the blending tool.
The maximum weight in case of the 042 and 73/144 machine sizes is 120 respectively 240 kg.
As it can be difficult measure the actual weight that rests on it due to the unpredictable behavior of the various material, we consider that the volume of our standard hoppers will not generate problems for material having their specific weight up to 1.3 t/m3. Otherwise, please contact our Sales Department.
In case the weight laid on the micro-batch feeder exceeds the indicated limits there has to be provided a safety system upstream the machine.

N.B.: Life of the micro-batch feeder increases considerably if it is emptied at the end of each working day. This becomes even more important with materials which, through longer storage, tend to harden or pack.

ASSEMBLY / DISMANTLING
FASTENING

The bottom part of the micro-batch feeder must be firmly fastened to the ground or to a support structure using nuts and bolts.
If on top of the standard hopper another loading system is installed the connection must be flexible in order to avoid vibrations.
In any case, vibrations must be avoided.
The micro-batch feeders cannot be used as a external support for the machines downstream it (eg. there cannot be hanged screw conveyors, belt conveyors and so on).

IMPORTANT: to prevent accidents it is necessary that the hopper for manual loading is equipped with fixed (bolted) protection grille.
Standard manual loading hoppers are always supplied complete with a protection grille.
Accident prevention laws require that this grille is correctly assembled and that the user does not remove it. If the user provides a different loading system or different types of mobile protection the protection must be able to stop the feeder instantaneously if protection is removed or opened.

This device is also meant to prevent machine start-up if the protection is not closed.

BETRIEB

Je nach Anlagentyp wird der Mikrodosierer über eine zentrale Steuerung oder einen Vor-Ort-Schaltkasten in Betrieb genommen.
Es ist unbedingt erforderlich das spezifische Gewicht des Produktes zu kennen, das auf dem Mikrodosierer aufliegt, da das Gewicht die max. Belastbarkeit des inneren Gehäuse nicht überschreiten darf. Des Weiteren könnte durch ein zu hohes Produktgewicht das Mischwerkzeug überbeansprucht bzw. verbogen werden.
Das Maximalgewicht bei den Maschinengrößen 042 und 73/144 ist 120 bzw. 240 kg.
Da das Verhalten verschiedener Materialien oft unvorhersehbar ist, kann es schwierig sein, das momentane Gewicht des auf der Maschine lastenden Materials zu messen. Ausgehend vom Volumen unseres Standardbehälters können wir jedoch einschätzen, das bei Materialien mit einem spezifischen Gewicht bis 1,3 t/m^3 keine Probleme entstehen. Andernfalls bitte unsere Vertriebsabteilung kontaktieren.
Für den Fall, dass das aufliegende Produkt das maximale Gewicht überschreitet, sind vor der Maschine entsprechende Schutzvorrichtungen zu installieren.

N.B.: Die Lebensdauer des Mikrodosierers erhöht sich merklich, wenn er täglich nach Feierabend geleert wird. Besonders wichtig ist dies bei der Dosierung von Medien, die nach längerer Lagerung zum Aushärten oder Anbacken neigen.

MONTAGE / DEMONTAGE
BEFESTIGUNG

Der Mikrodosierer muß an seiner Unterseite bündig am Boden oder auf einem Rahmen mittels Schrauben befestigt werden.
Falls über dem Trichter ein weiteres Befüllsystem vorgesehen ist, muß zwischen diesem und dem Trichter des Dosierers eine flexible Verbindung vorgesehen werden, um zu verhindern, daß sich Vibrationen übertragen.
Vibrationen sind im allgemeinen zu vermeiden.
Die Mikrodosierer können nicht als äußere Halterung nachgelagerter Maschinen eingesetzt werden (z.B. können keine Schnecken- oder Gurtförderer etc. angebaut werden).

WICHTIG: zur Unfallverhütung muß der Trichter zur manuellen Aufgabe mit einem fest installierten (verschraubten) Schutzgitter versehen werden.
Die manuellen Aufgabetrichter werden immer mit Schutzgitter geliefert. Im Interesse der Unfallverhütung ist es wichtig, dass das Schutzgitter ordnungsgemäß montiert ist und nicht entfernt wird. Falls der Betreiber ein anderes Befüllsystem oder bewegliche Schutzvorrichtungen vorsieht, so müssen diese Schutzvorrichtungen so ausgeführt sein, daß das Gerät augenblicklich abschaltet, sobald die Schutzvorrichtung entfernt oder geöffnet wird.

Diese Vorrichtung darf es außerdem nicht gestatten, dass die Maschine eingeschaltet werden kann, wenn das Schutzgitter sich nicht in der geschlossenen Position befindet.

FONCTIONNEMENT

Selon le type d'installation, le fonctionnement du microdoseur est contrôle ou par un pupitre de commande ou par starter sur place.
Il faut connaître le poids du produit qui se trouve sur le corps du microdoseur, puisqu'il ne doit pas dépasser la résistance maximale du boîtier interne et aussi il ne doit pas générer une flexion anormale de l'outil d'homogénéisation.
Le poids maximum pour les tailles 042 et 73/144 est de 120 et respectivement de 240 kg.
Comme il est difficile de mesurer le poids réel en raison du comportement imprévisible des différents matériaux, nous estimons que le volume de nos trémies standards ne génèrent pas de problèmes pour les matières avec poids spécifique jusqu'à 1,3 t/m^3. Dans le cas contraire, veuillez contacter notre département des ventes.
Dans le cas où le poids visé sur le microdoseur excède les limites indiquées, il faut prévoir un système de sécurité sur la machine.

N.B.: La durée du microdoseur augmente sensiblement si on le vide à la fin de la journée.
Ceci est particulièrement important quand le matériau dosé tend à durcir ou à se compacter s'il reste ferme pour une certaine période de temos.

MONTAGE / DEMONTAGE
FIXAGE

Le microdoseur doit être bien fixé dans la partie inférieure à une structure de support au moyen de boulons dans les trous prévus à ce propos.
Si au-dessus de la trémie est prévu un autre système de chargement, la connexion doit être flexible afin d'éviter des vibrations.
En tout cas il faut éviter toute vibration.
Les microdoseurs ne peuvent pas être utilisés comme support externe pour les machines en aval (par exemple vous ne pouvez pas pendre des convoyeurs à vis, convoyeurs à bande et ainsi de suite).

IMPORTANT: pour respecter les dispositions en vigueur en ce qui concerne la prévention d'accidents, il est nécessaire que la trémie de chargement manuel soit toujours munie d'une protection fixe (boulonnée).
Les trémies à chargement manuel sont toujours fournies dotées de grille de protection. Il est d'une importance fondamentale, dans le respect des normes de sécurité contre les accidents du travail, que cette protection soit assemblée correctement et ne soit pas enlevée. Au cas où le client utilise un autre système de chargement ou prévoit des protections de type mobile, il est obligatoire de doter l'appareillage d'un dispositif qui provoque son arrêt immédiat quand la protection est enlevée ou ouverte.

En outre ce dispositif ne doit pas permettre le démarrage de la machine quand la protection n'est pas dans la position correcte de fermeture.

FUNZIONAMENTO

In base al tipo di impianto, il funzionamento del microdosatore è controllato o da un quadro centrale di comando o da un comando in loco.
E molto importante conoscere il peso del prodotto che grava sul corpo del microdosatore: esso non deve mai superare la massima resistenza della cassa interna e non deve portare a flessioni anomale dell'utensile di omogenizzazione.
Considerare rispettivamente 120kg e 240kg come peso massimo per le taglie 042 e 73/114.
Poichè è molto difficile quantificare il peso che realmente viene a gravare a causa della imprevedibilità del comportamento dei vari prodotti, riteniamo che i volumi delle nostre tramogge standard con prodotti di peso specifico fino a 1,3 t/m^3 non abbiano problemi, in caso contrario consultare il ns. Uff. Tecnico Comm.le.
Qualora il peso sopra il microdosatore sia superiore ai limiti riportati sopra, è necessario prevedere un sistema di protezione nella tramoggia posto sopra il microdosatore.

N.B.: Si aumenta notevolmente la durata del microdosatore svuotandolo al termine di ogni giorno lavorativo.
Questo è particolarmente importante quando il materiale trasportato tende ad indurirsi o a compattarsi se rimane fermo per un certo periodo di tempo.

MONTAGGIO / SMONTAGGIO
FISSAGGIO

Il microdosatore deve essere fissato saldamente nella parte inferiore a una struttura di sostegno mediante viti da applicarsi nelle apposite sedi.
Se sopra una tramoggia viene posto un altro sistema di carico questa connessione deve essere flessibile per evitare la propagazione di vibrazioni.
In ogni caso l'importante è che siano evitate vibrazioni.
I microdosatori non possono essere impiegate da sostegno esterno per macchine sottostanti (per es. non si possono appendere coclee, nastri trasportatori, canalette, etc.).

IMPORTANTE: per rispettare le vígenti disposizioni in materia di prevenzione, è necessario che l'eventuale tramoggia di carico manuale sia sempre munita di protezione fissa (imbullonata).
Le tramogge a caricamento manuale sono fornite sempre complete di griglia di protezione, è di fondamentale importanza, per il rispetto delle norme antinfortunistiche, che tale protezione sia correttamente assemblata, e non venga rimossa. Qualora il cliente usi un altro sistema di carico o preveda protezioni. di tipo mobile, è obbligatorio dotare l'apparecchiatura di un dispositivo che ne provochi l'arresto immediato all'atto della rimozione o apertura della protezione.

Tale dispositivo, inoltre, non deve consentire l'avviamento della macchina se la protezione non è nella posizione di chiusura.

Particular attention must be paid to the feeder outlet. Either a vertical outlet must be fitted (see catalogue chapter on “accessories”) or the area around the outlet must be made inaccessible to the operator because the metering screw runs freely.

Am Auslauf des Dosierers besteht besondere Verletzungsgefahr. Entweder muß ein vertikales Ablaufrohr verwendet werden (siehe Katalog “Zubehör”) oder der gesamte Bereich muß dem Bedienungspersonal wegen der sich frei drehenden Dosierspirale unzugänglich gemacht werden.

Il faut faire attention particulière à la sortie du microdoseur: ou il faut utiliser la sortie verticale (v. catalogue “accessoires”), ou cette partie doit être inaccessible au personnel parceque dans ce point la spire peut tourner librement.

Particolare attenzione deve poi essere posta al lato uscita del microdosatore: o si deve usare lo scarico verticale (vedi catalogo accessori) oppure questa parte del microdosatore deve essere inaccessibile al personale, in quanto in quel punto la spirale può ruotare a ciclo libero.

DISMANTLING

ATTENTION:
PRIOR TO DISASSEMBLING ANY PART OF THE MICRO-BATCH FEEDER, ENSURE FEEDER MOTOR IS DISCONNECTED FROM MAINS SUPPLY.

MAINTENANCE
Failure to follow the following instructions may cause problems and invalidate the warranty on the supplied equipment.
Once every day, when operation finishes, empty the micro-batch feeder.
Once every week check outlet is free from material residues. If not clean thoroughly to avoid any kind of obstruction to material flow.
With the batch feeder in 304 stainless steel open the inspec-tion hatch.
Obviously lubrication and maintenance intervals depend on the use and on the type of metered material.

In case of feeders with MBTT type shaft seals grease once a month.
If the machine uses MBTX, MBTN or MBTT type seals, check these on a monthly basis to make sure they are intact.
For more heavy-duty applications, such as with particularly abrasive material and/or high tool rotation speed, increase the maintenance frequency.

SUBSTITUTION OF WEAR PARTS
Follow the following instructions (see appendix).

DEMONTAGE

ACHTUNG:
VOR DEM AUSBAU IRGENDWELCHE TEILE AUS DEM DOSIERER SICHERSTELLEN, DASS DIE HAUPTSTROMZUFUHR ZUM MOTOR DES DOSIERERS UNTERBROCHEN IST.

WARTUNG
Das Nichtbefolgen der nachfolgenden Vorschriften kann zu Störungen führen und die Gewährleistung auf das gelieferte Gerät außer kraft setzen.
Jeden Tag nach Feierabend den Mikrodosierer leer fahren.
Einmal die Woche prüfen, ob Auslauf frei von Materialrück-ständen ist und ggfls. gründlich säubern, um einen freien Produktfluß zu gewährleisten.
Beim Dosierer aus Edelstahl 1.4301 die Inspektionsklappe öffnen.
Es ist klar, daß die Schmier- und Wartungsintervalle sowohl von der Betriebsart, als auch vom Dosiergut abhängen.

Bei Dosierern mit Wellenabdichtungen vom Typ MBTT ein mal monatlich abschmieren.
Falls die Maschine Dichtungen vom Typ MBTX, MBTN oder MBTT vorsieht, sind diesen Dichtungen einmal im Monat auf Unversehrtheit zu prüfen.
Bei Anwendungen unter schwierigen Verhältnissen, wie beispielsweise mit besonders abrasiv wirkendem Material und/oder hoher Drehgeschwindigkeit des Werkzeugs sind die Wartungsintervalle zu verkürzen.

AUSTAUSCH DER VERSCHLEISSTEILE
Nachfolgende Anleitungen befolgen (siehe Anhang).

DEMONTAGE

ATTENTION:
AVANT DE DEMONTER DES PIECES DU MICRODOSEUR S’ASSURER QUE L’ALIMENTATION DE COURANT AU MOTEUR ELECTRIQUE SOIT DETACHE !

ENTRETIEN
Le ne pas respecter rigoureusement les instructions suivantes peut causer des problèmes et peut invalider la garantie sur les machines fournies.
Tous les jours, à la fin du travail, vider le microdoseur.
Toutes les semaines vérifier si la sortie est libre de résidus de matériau; sinon, la nettoyer soigneusement afin d’éviter toute obstruction au passage du matériau.
Dans le doseur en inox 304 ouvrir la trappe de visite.
Il est évident que les intervalles de lubrification et de remplacement des pièces dépend et de l’utilisation et du type de matériau dosé.

Au cas où la machine est prévue d’étanchéités de type MBTT graisser une fois par mois.
Au cas où la machine prévoit des étanchéités type MBTX, MBTN ou MBTT contrôler chaque mois l’intégrité du joint d’étanchéité.
En cas d’applications particulièrement contraignantes, par exemple des matériaux abrasifs et/ou une vitesse élevée de rotation de l’outil, réduire les intervalles de maintenance.

SUBSTITUTION DES PIECES D’USURE
Suivez les instructions suivantes (Voir annexe).

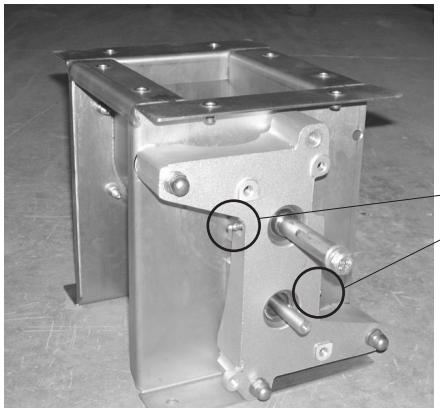
SMONTAGGIO

ATTENZIONE:
PRIMA DI SMONTARE QUALSIASI PEZZO DEL MICRODOSATORE, ASSICURARSI CHE L’ALIMENTAZIONE DI CORRENTE AL MOTORE ELETTRICO SIA STACCATA !

MANUTENZIONE
Il non attenersi strettamente alle seguenti istruzioni può causare problemi ed invalidare la garanzia sulle macchine fornite.
Ogni giorno, alla fine del lavoro vuotare il microdosatore.
Ogni settimana, verificare se lo scarico è libero da residui di materiale: se non lo è pulire accuratamente per evitare ogni ostruzione al passaggio di materiale.
Nel dosatore in AISI 304 aprire lo sportello d’ispezione.
E’ chiaro che il tempo di lubrificazione e di sostituzione dei pezzi dipende sia dall’uso del dosatore che dal tipo di prodotto trasportato.

Nel caso in cui la macchina preveda tenute tipo MBTT procedere mensilmente all’ingrassaggio.
Nel caso la macchina prevede tenute tipo MBTX, MBTN o MBTT procedere mensilmente al controllo dell’integrità della tenuta stessa.
In caso di applicazioni più gravose, per esempio materiale particolarmente abrasivo e/o elevata velocità di rotazione dell’utensile, accorciare gli intervalli di manutenzione.

SOSTITUZIONE DEI PEZZI DI USURA
Seguire le seguenti istruzioni (Vedi allegati).



Greasing points
Schmierstellen
Points de graissage
Punti di ingrassaggio

METERING SCREW REPLACEMENT OF SINT® MBF - *AUSTAUSCH DES DOSIERWERKZEUGS VON SINT® MBF*

LUBRICATION

Micro-batch feeder MBW 042

The installed gear reducer is filled with long life grease and does, therefore, not require any maintenance.

Micro-batch feeders MBF 073-114

VARVEL REDUCERS
are sealed for life and, therefore, need no extra lubrification.

SPEED VARIATOR
(MOTOVARIO)
Oil splash lubricated. For this reason it is particularly important to perform the following checks before starting them up:
- ensure that oil plugs are in right place and tight;
- ensure unit is topped up with oil to the, correct level. Oil must come up to about midpoint of the oil level plug according to mounting position.
  Units are supplied without breather plugs.
  Use only reccomended oils (see lable).

SCHMIERUNG

Mikrodosierer MBF 042

Das installierte Getriebe ist wartungsfrei dank einer Lebensdauer-Fettschmierung.

Mikrodosierer MBF 073-114

VARVEL-GETRIEBE
Erfordern keinerlei Wartung dank einer Lebensdauer-Fettschmierung.

REGELGETRIEBE
(MOTOVARIO)
Da spritzgeschmiert, vor Inbetriebnahme unbedingt folgende Kontrollen vornehmen:
- Lage der Ölschrauben muß der jeweiligen Bauform entsprechen;
- Den ordnungsgemäßen Füllstand überprüfen; Am Schauglas muß ca. halber Füllstand anstehen. Regelgetriebe werden ohne Entlüftungsschrauben geliefert. Zum Nachfüllen die in der Tabelle genannten Ölsorten verwenden.

LUBRIFICATION

Microdoseur MBF 042

Le réducteur monté sur ce type de doseur est muni d'une graisse spéciale à vie.

Microdoseurs MBF 073-114

REDUCTEURS VARVEL
Aucune intervention nécessaire (lubrification à vie).

La lubrification du VARIATEUR (MOTOVARIO) se faisant par barbotage, on ne saurait trop recommander avant la mise en marche:
- de s'assurer de la position correcte des bouchons;
- de s'assurer du bon niveau du lubrifiant: l'huile doit être visible approximativement à mi-indicateur du niveau. Ils sont fournis sans bouchons de soupirail. Pour les appoints éventuels, utiliser uniquement les lubrifiants préconisés (voir tableau).

LUBRIFICAZIONE

Microdosatore MBF 042

Il riduttore montato con questo tipo di macchina è dotato di uno speciale grasso che ne mantiene la lubrificazione a vita.

Microdosatori MBF 073-114

RIDUTTORI VARVEL
Non necessitano di alcun intervento essendo lubrificati a vita.

La lubrificazione del VARIATORE (MOTOVARIO) avviene per sbattimento, quindi è molto importante, prima della messa in opera, eseguire le seguenti verifiche:
- assicurarsi che la posizione dei tappi olio sia corretta;
- verificare che il livello dell'olio sia corretto: olio visibile a circa metà della spia di livello. Sono forniti senza tappo di sfiato. Per gli eventuali rabbocchi attenersi ai tipi di olio raccommandati nella tabella.

Code MDXI125 grease nipple kit with 125 ml cartridge for greased MBTT seals

For assembly on new plants:

1. Make sure the grease used in System 24 is of the right type.
2. Make sure the grease supplied can be used with the one already present.
3. Check to ensure that the environmental temperature remains constant between -20ºC and + 55ºC.
4. Check to make sure the grease reaches the components to be lubricated.
5. Protect the unit from heat and temperature variations.

Note:
- The lubricator can be temporarily made inactive by setting the selector on 0.
- The unit can be mounted anywhere; it is airtight and can therefore also be installed immersed inside water.
- The oil lubricators are provided with a connector fitted with a check valve. Cut the tip before installation. Do not remove the connector.

Installation
1- Mark the installation date on the unit with an indelible ink marker pen.
2- Open the lubricant intake by cutting the tip or removing the cap (Fig. 3).
3- To activate the lubricator, turn the selector using a 3mm Allen wrench (Fig. 4).
4- Clean the area around the lubrication point.
5- Fit the new unit with the connector ready and tighten manually (Fig.6 - Fig.1).

Bestell-Nr.MDXI125 Schmierpatronensatz 125 ml für mit MBTT geschmierte Dichtungen

Für die Montage auf neuen Anlagen:
1. Sicherstellen, dass das im System 24 benutzte Fett der richtigen Sorte entspricht.
2. Sicherstellen, dass das Fett, das man benutzt, zusammen mit dem vorher vorhandenen benutzt werden kann.
3. Sicherstellen, ob die Umgebungstemperatur konstant zwischen -20°C und +55°C liegt.
4. Sicherstellen, dass das Fett die zu schmierenden Bestandteile erreicht.
5. Die Einheit vor Hitze und Temperatursprüngen schützen.

Anm.:
- Die Schmiervorrichtung kann vorübergehend abgestellt werden, wenn man den Schalthebel auf die Stellung 0 bringt.
- Das Gerät ist wasserdicht und kann daher überall installiert werden, auch in Wasser eingetaucht.
- Die Schmiervorrichtungen mit Öl werden mit einem Anschluss geliefert, der mit einem Rückschlagventil versehen ist. Vor der Installation das Ende absägen. Den Stutzen nicht entfernen.

Installation
1- Das Installationsdatum mit einem unauslöschlichen Filzstift auf der Einheit vermerken (Abb. 2).
2- Die Schmierstoffabgabe öffnen, indem man die Versiegelung durchschneidet oder den Stopfen abnimmt (Abb. 3).
3- Zum Aktivieren der Schmiervorrichtung den Wahlschalter um 3 mm drehen, und zwar mit einem Steckschlüssel (Abb. 4).
4- Den Bereich rings um die Schmierstelle reinigen.
5- Die neue Einheit mit dem vorhandenen Anschluss montieren und von Hand anziehen (Abb. 6 - Abb. 1)

Code MDXI125 kit graisseur à cartouche 125 ml pour étanchéités MBTT graissées

Pour le montage sur installations neuves:
1. S'assurer que la graisse utilisée dans le System 24 est du type approprié.
2. S'assurer que la graisse administrée peut être utilisée ensemble à celle existante.
3. Contrôle que la température ambiante se maintient constante entre -20°C et +55°C.
4. Vérifier que la graisse atteint les composants à lubrifier.
5. Protéger l'unité contre la chaleur et les écarts de température.

Remarques:
- Le graisseur peut temporairement être rendu inactif en tournant le sélecteur sur la position 0.
- L'unité peut être montée de partout, elle est étanche et peut donc être aussi installée immergée dans l'eau.
- Les graisseur à huile sont fournis avec un raccord doté de clapet antiretour. Avant de les monter couper l'extrémité. Ne pas enlever le raccord.

Mise en place
1- Marquer la date de mise en place sur l'unité avec un marqueur à encre indélébile (fig. 2).
2- Ouvrir la prise du lubrifiant en coupant le sceau ou en enlevant le bouchon (Fig. 3).
3- Pour activer le graisseur tourner le sélecteur de 3 mm en utilisant une clé d'Allen (Fig. 4).
4- Nettoyer toute la partie autour du point de lubrification.
5- Monter la nouvelle unité avec le raccord prévu et serrer à la main (Fig.6 - Fig.1).

Codice MDXI125 kit ingrassatore a cartuccia 125 ml per tenute MBTT ingrassate

Per il montaggio su impianti nuovi:

1- Assicurarsi che il grasso usato nel System 24 sia del tipo adatto.
2- Assicurarsi che il grasso somministrato possa essere usato insieme a quello preesistente.
3- Controllare se la temperatura ambientale si mantiene costante tra -20°C e +55°C.
4- Verificare che il grasso raggiunga i componenti da lubrificare.
5- Proteggere l'unità dal calore e dagli sbalzi di temperatura

Note:
- il lubrificatore può essere temporaneamente inattivato settando il selettore sulla posizione 0.
- L'unità può essere montata ovunque, è a tenuta stagna e può quindi essere installata anche sommersa in acqua.
- I lubrificatori ad olio sono forniti con un raccordo dotato di valvola di non ritorno. Prima di installarli tagliare l'estremità. Non rimuovere il raccordo.

Installazione
1- Marcare la data di installazione sull'unità con un pennarello ad inchiostro indelebile (fig.2).
2- Aprire la presa del lubrificante tagliando il sigillo o estraendo il tappo. (fig.3)
3- Per attivare il lubrificatore girare il selettore di 3 mm usando una chiave a brugola (fig. 4).
4- Pulire l'area intorno al punto di lubrificazione.
5- Montare la nuova unità con il raccordo predisposto e stringerla a mano (Fig.6 - Fig.1)

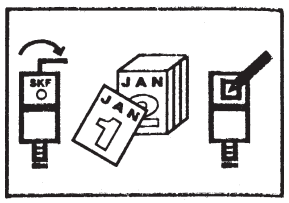

Fig.- Abb. 2

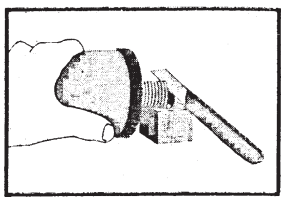

Fig.- Abb. 3

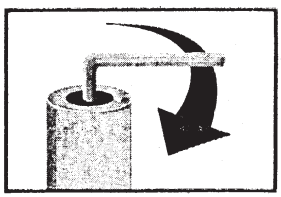

Fig.- Abb. 4

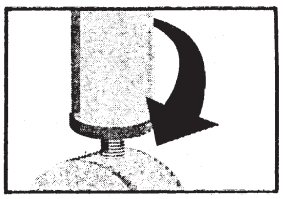

Fig.- Abb. 5

Selection on the basis of experience
If the previous results acquired on the basis of experience have been satisfactory, retain the same criteria.

Selection on the basis of lubrication using manual grease nipple
Set the lubricator emptying period in such a way as to guarantee the same quantity of lubricant as that supplied using a manual grease nipple.
For example:
- Bearing "X" receives 10 grease pump cycles by means of the grease injector (SKF 1077600) per month.
- The quantity of grease per pump cycle is 2.0 cm3.

LAGD 125
- The quantity of grease inside the LAGD 125 lubricator is 125 cm³.
- Therefore 125 cm³/2.0 cm³ = 62 pump cycles.
- 62/10 (pump cycles per month) equivalent to 6.2 months.

Position the selector on 6 months using the 3mm Allen wrench.

Activation period
A period of activation is necessary before the lubricator can start supplying grease. This period is variable, depending on the selected emptying time and the temperature. At normal room temperatures, the grease delivery will start within a week. Two weeks are required for temperatures of -20ºC. Therefore, check the bearing to make sure it has enough grease to last this period.

Influence on selection of duration
The emptying time can be influenced by the resistance offered by the lubrication channels and the room temperature. If the temperature is less than -10ºC, the emptying time will be approximately double that indicated on the lubricator.
On the other hand, if the room temperature is over 40ºC, the time will be halved.

Wahl aufgrund der Erfahrung
Wenn die vorher erhaltenen Resultate aufgrund der Erfahrung zufriedenstellend waren, die gleichen Kriterien beibehalten.

Wahl aufgrund der Neuschmierung mit Schmieren von Hand
Den Zeitraum für die Entleerung des Schmierstoffvorrats so einstellen, dass die gleiche Menge der vorher von Hand verabreichten Schmierstoffmenge gewährleistet wird. z.B.:
- Das Lager „X" erhält 10 Einspritzungen Fett pro Monat mittels des Schmiernippels (SKF 1077600).
- Die Fettmenge jeder einzelnen Einspritzung beträgt 2,0 cm³.

LAGD 125
- Die Fettmenge, die sich innerhalb der Schmiervorrichtung LAGD befindet, beträgt 125 cm³.
- Also 125 cm³/2,0 cm³=62 Einspritzungen.
- 62/10 (Einspritzungen pro Monat) entspricht 6,2 Monaten.

Den Wahlschalter daher auf 6 Montage stellen, wozu man die Inbusschraube von 3 mm benutzt.

Aktivierungszeit
Bevor die Schmiervorrichtung in der Lage ist, Fett abzugeben, braucht sie eine Aktivierungszeit. Diese Zeit hängt von der gewählten Entleerungszeit und der Temperatur ab. Bei normaler Umgebungstemperatur beginnt die Fettabgabe innerhalb einer Woche. Bei -20°C sind zwei Wochen erforderlich. Sicherstellen, dass das Lager ausreichend mit Schmierstoff versehen ist, um diese Zeit zu überstehen.

Einfluss auf der Wahl der Dauer
Die Entleerungszeit kann durch den Widerstand beeinflusst werden, den die Schmierkanäle bieten, wie auch die durch Umgebungstemperatur. Bei Temperaturen unter -10°C beträgt die Entleerungszeit circa das doppelte im Bezug zu der Abgabe auf der Schmiervorrichtung. Bei Umgebungstemperaturen über 40°C wird die Zeit dagegen halbiert.

Sélection en fonction de l'expérience
Si les résultats acquis en fonction de l'expérience sont satisfaisants, maintenir les mêmes critères.

Sélection en fonction de la lubrification effectuée par graisseur manuel
Régler la période de vidage du graisseur de manière à garantir la même quantité de lubrifiant fourni précédemment avec un graisseur manuel.
Par exemple:
- Le roulement "X" reçoit 10 coups de pompe à travers l'injecteur de graisse (SKF 1077600) par mois.
- La quantité de graisse pour chaque coup de pompe est de 2,0 cm3.

LAGD 125
- La quantité de graisse à l'intérieur du graisseur LAGD 125 est de 125 cm³.
- Donc 125 cm³/2,0 cm³ = 62 coups de pompe.
- 62/10 (coups de pompe par mois) équivaut à 6,2 mois.

Placer le sélecteur sur 6 mois à l'aide de la clé d'Allen de 3 mm.

Période d'activation
Une période d'activation est nécessaire avant que le lubrificateur ne soit en mesure de fournir la graisse. Cette période est variable selon la période de vidage choisie et de la température. A une température ambiante normale, la graisse sera débitée au bout d'une semaine. Deux semaines sont nécessaires à la température de -20ºC. Vérifier donc que le roulement a suffisamment de lubrifiant pour couvrir cette période.

Influence sur la sélection de la durée
Le temps de vidage peut être influencé par la résistance offerte par les canaux de lubrification et par la température ambiante. Si la température ambiante est inférieure à -10ºC, le temps de vidage sera approximativement le double par rapport à ce qui est indiqué sur le graisseur.
Au contraire avec une température ambiante de plus de 40ºC, le temps sera diminué de moitié.

Selezione in base all'esperienza
Se i precedenti risultati acquisiti in base all'esperienza sono soddisfacenti, mantenere gli stessi criteri.

Selezione in base alla rilubrificazione effettuata tramite ingrassatore manuale
Settare il periodo di svuotamento del lubrificatore in modo da garantire lo stesso quantitativo di lubrificante precedentemente fornito con un ingrassatore manuale.
es.:
- il cuscinetto"X" riceve 10 pompate tramite l'iniettore di grasso (SKF 1077600) al mese.
- Il quantitativo di grasso per ogni pompata è di 2.0 cm³.

LAGD 125
- Il quantitativo di grasso all'interno del lubrificatore LAGD 125 è di 125 cm³.
- Dunque 125 cm³/2.0 cm³=62 pompate.
- 62/10 (pompate per mese) equivale a 6.2 mesi.

Posizionare allora il selettore su 6 mesi con l'ausilio della brugola da 3 mm.

Periodo di attivazione
Prima che il lubrificatore sia in grado di fornire il grasso è necessario un periodo di attivazione. Questo tempo è variabile a seconda del periodo di svuotamento prescelto e della temperatura. A temperatura ambiente normale comincerà ad erogare il grasso entro una settimana. A -20°C necessiteranno due settimane. Verificare quindi che il cuscinetto abbia lubrificante a sufficienza per coprire questo periodo.

Influenza sulla selezione della durata
Il tempo di svuotamento può essere influenzato dalla resistenza offerta dai canali di lubrificazione e dalla temperatura ambiente. Se la temperatura è inferiore a -10°C il tempo di svuotamento sarà approssimativamente il doppio rispetto a quanto indicato sul lubrificatore.
Al contrario con temperatura ambiente di oltre 40°C il tempo sarà dimezzato.

NOISE
Operation noise depends on different factors. The most important ones are material properties and the application. The noise values in the following table were measured in one metre distance in the worst possible position.

BETRIEBSGERÄUSCHE
Betriebsgeräusche sind von verschiedenen Faktoren abhängig. Davon sind die wichtigsten die Produkteigenschaften und die Anwendung.
Die Geräuschwerte in der nachstehenden Tabelle wurden in einem Meter Entfernung in der ungünstigsten Position gemessen.

BRUIT
Le niveau de bruit des appareils dépend de différents facteurs. Les plus importants sont les caractéristiques du matériau dosé et l'application.
La valeur de bruit dans le tableau ci-dessous est mesurée à la distance de 1 m, dans la position plus défavoravble.

RUMORE
Il livello di rumorosità delle macchine dipende da diversi fattori tra cui principalmente la natura del materiale dosato e applicazione. Il valore di rumorosità riportato nella tabella sottostante, è misurato alla distanza di 1 m, nella posizione più sfavorevole.

Type	dB(A)
MBF 042	56
MBF 073	60
MBF 114	62

DISAMNTLING AND DISPOSAL
Storage of equipement for longer periods:
- clean the equipment thoroughly.
- store the equipment in a container.

Scrapping:
- recycle plastic materials (e.g. seals, coatings etc.) and dispose according to regulations.
- Dispose of metal parts at the scrap yard.

DEMONTAGE UND VERSCHROTTUNG
Lagerung des Geräts über längere Zeiträume:
- Gerät gründlich säubern.
- Gerät in einem Behälter lagern.

Verschrottung:
- Kunststoffteile (z.B. Dichtungen, Beschichtungen etc.) gemäß den Vorschriften recyclen.
- Metallteile beim Schrotthändler abgeben.

DEMONTAGE ET DEMOLITION
Mise en entrepôt de la machine pendant une longue période:
- nettoyez soigneusement la machine;
- protégez-la en la mettant dans un conteneur.

Démolition:
- récupérez les pièces en matière plastique (par ex. revêtements, joints, etc.) et remettez les aux centres de récolte spécialisés;
- remettez les autres pièces en acier aux centres de récupération des métaux.

SMANTELLAMENTO E DEMOLIZIONE
Immagazinaggio della macchina per periodo prolungato:
- pulire accuratamente la macchina.
- immagazinare la macchina dentro un contenitore.

Rottamazione:
- riciclare i pezzi in plastica (per es. guarnizioni, rivestimenti etc.) a norma di legge.
- Consegnare i pezzi in metallo ai centri di raccolta.

FAULT FINDING
Minor problems can be resolved without consulting a specialist. Here are a few examples of possibles causes and solutions.

BETRIEBSSTÖRUNGEN UND ABHILFE
Kleinere Störungen können ohne die Einschaltung eines Fachmanns behoben werden. Im folgenden einige Beispiele möglicher Ursachen und Abhilfen.

PROBLEMES EVENTUELS
Vous pouvez résoudre vous-même les petits problèmes sans devoir consulter un spécialiste. De suite on donne quelques exemples des cuses éventuelles et des solutions possibles.

POSSIBILI INCONVENIENTI
I problemi minori possono essere risolti senza consultare uno specialista. Diamo qui di seguito un elenco degli incovenienti più comuni con le eventuali cause e possibili rimedi.

FAULT	POSSIBLE REASON	ACTION
Screw or agitator is damaged	Foreign body inside feeder	Remove foreign body and replace damaged components
Screw or agitator stops	Hygroscopic material inside feeder has absorbed humidity	Unload feeder completely when shutting down for longer periods
Rotating components unscrewed, no material handled	Motor incorrectly wired	Rewire (metering screw must turn anticlockwise viewed from behind drive unit)
Sticking of hygroscopic products **Agglomeration of viscous materials** **Contamination of the product**	Long shutdown period	Unload feeder completely when shutting down for longer periods

STÖRUNG	MÖGLICHE URSACHE	ABHILFE
Beschädigung des Dosier- oder Homogenisierwerkzeugs	Eindringen von Fremdkörpern	Fremdkörper entfernen und beschädigte Teile austauschen.
Blockierung von Dosier- oder Homogenisierwerkzeug	Verkleben von hygroskopischen Produkten bei längerer Verweilzeit. Viskose oder zum Anbacken neigende Medien mit hierfür ungeeigneten Werkzeugen.	Bei längeren Stilistandzeiten Gerät leeren. Geeignetes Dosierwerkzeug mit Innenrohr verwenden.
Dosierwerkzeug hat sich gelöst, keine Dosierung	E-Motor falsch angeschlossen.	E-Motor umklemmen; stellt man sich hinter den Antrieb, muß sich das Dosierwerkzeug gegen den Uhrzeigersinn, das Homogenisierwerkzeug im Uhrzeigersinn drehen.
Kompression hygroskopischer Medien **Verklumpen viskoser Medien** **Produktkontamination**	Längere Stillstandzeiten.	Bei längeren Stillstandzeiten das Gerät leeren.

PROBLEME	CAUSE POSSIBLE	SOLUTION
Défaut sur hélices ou rotors	Pénétration de corps étrangers dans la machine.	Retirer le corps étranger, remplacer les éléments endommagés.
Blocage de l'hélice ou du rotor	Empâtement de produits hygroscopiques demeurant dans la machine en milieux humides. Produits visqueux ou compressés traités au moyen de doseurs non adaptés.	Toujours vider la machine en cas de longues périodes de non utilisation. Utiliser des doseurs adaptés avec tube interne.
Dévissage organes roulants, Absence de flux	Connexion erronée des moteurs électriques.	Inversion de phases des moteurs: un observateur au chargement voit l'instrument de dosage tourner dans le sens trigonométrique, pendant que l'instrument d'homogénéisation tourne dans le sens horaire.
Compression de produits hygroscopiques **Colmatage de produits visqueux** **Contamination de oroduits périssables**	Périodes d'inactivité.	Vider la machine en prévision de longues périodes d'inactivité.

PROBLEMA	POSSIBILE MOTIVO	SOLUZIONE
Attorcigliamento eliche e rotori	Penetrazioni di corpi estranei entro la macchina.	Rimuovere il corpo estraneo; sostituire gli elementi danneggiati.
Blocco eliche	Appesantimento dei materiali igroscopici che permangono entro la macchina in ambienti umidi. Prodotti viscosi e impaccanti.	Svuotare sempre la macchina in caso di lunghi periodi di non utilizzo. Utilizzare utensili idonei.
Svitamento organi rotanti, assenza di flusso.	Erroneo collegamento delle fasi dei motori elettrici.	Inversioni fasi dei motori: un osservatore al carico vede l'utensile di dosaggio ruotare in senso antiorario.
Impaccamento prodotti igroscopici. **Solidificazione prodotti viscosi.** **Contaminazione prodotti deperibili**	Periodi di inattività.	Svuotare la macchina in previsione di lunghi periodi di inattività.

		Not applicable - *Nicht anwendbar* Non applicable - *Non applicabile*			

CHECK LIST IN CASE OF TROUBLE

GENERAL QUESTIONS
a) Does metering screw start without problems even after longer down periods?
b) Does it seem that atmospheric conditions contribute to malfunctioning?
c) Feeder must work in perfectly horizontal position.
d) Outlet must be free.

HOPPER CHECK
a) Hopper capacity must be less than 100 litres.
b) Is hopper equipped with bridge breaking deflector?
c) Is hopper equipped with fluidization, vibrator or knocker?

ELECTRIC MOTOR CHECK
a) Are voltage drops possible due to contemperary starting of different machines?
b) Is the plant equipped with a power generator ?
c) Check if motor receives power.
d) Check motor is correctly connected and wires are fixed properly to terminals.
e) Check power cut-out in main controls is correctly set and compare to motor plate data.
f) Check correct sense of rotation of electric motor.

MICRO-BATCH FEEDER CHECK
a) Does material stick to metering screw?
b) Are there any lumps of material hindering material transport?
c) Is the tecnopolymer body damaged?
d) Ensure shaft seals do not loose material.
e) During transport metering screw must not touch feeder pipe.

MATERIAL CHECK
a) Material description?
b) Bulk density? (kg/dm^3)
c) Particle size? (µm/mm)
d) Humidity? (%)
e) Flowability? (make material slide down a metal plate by varying the angle from low to steep)
f) Compressible material? (can you make a “snowball”?)
g) Abrasive material? (does it hurt when rubbing it between fingers?)

CHECKLISTE BEI BETRIEBSSTÖRUNGEN

ALLGEMEINE FRAGEN
a) Läuft Dosierwerkzeug auch nach längeren Betriebsunterbrechungen problemlos an?
b) Scheint Fehlfunktion durch Witterung begünstigt ?
c) Gerät muß sich in exakt horizontaler Lage befinden.
d) Auslauf muß frei sein.

KONTROLLE DES TRICHTERS
a) Trichterinhalt muß weniger als 100 l betragen.
b) Ist Trichter mit Entlastungsvorrichtung ausgestattet?
c) Ist Trichter mit Luftauflockerung, Rüttler oder Klopfer ausgestattet?

KONTROLLE E-MOTOR
a) Sind aufgrund gleichzeitigen Einschaltens mehrerer Geräte Spannungsschwankungen möglich?
b) Ist Anlage mit einem Stromgenerator ausgerüstet?
c) Prüfen, ob am Motor Strom anliegt.
d) Prüfen, ob Motor korrekt angeschlossen ist und ob Klemmenmuttern fest angezogen sind.
e) Prüfen, ob Überstromschalter des Motors in der Hauptsteuerung richtig eingestellt ist und mit Typenschilddaten vergleichen.
f) Motordrehrichtung prüfen.

KONTROLLE DES MIKRO-DOSIERERS
a) Haftet Dosiergut am Dosierwerkzeug?
b) Behindern Produktklumpen die Dosierung?
c) Ist der polymerverkleidung beschädigt?
d) Sicherstellen, daß durch die Wellenabdichtungen kein Produkt austritt.
e) Während der Dosierung darf das Dosierwerkzeug das Förderrohr nicht berühren.

PRÜFUNG DES DOSIERGUTS
a) Materialbezeichnung?
b) Schüttgewicht? (kg/dm^3)
c) Körnung? (µm/mm)
d) Feuchte? (%)
e) Fließfähigkeit ? (Materialprobe auf einem geneigten Blech zum Fließen bringen)
f) Komprimierbarkeit? (Kann ein “Schneeball” geformt wer-den?)
g) Abrasivität? (Schmerzt es, wenn man Material zwischen den Fingern reibt?)

CHECK-LIST EN CAS DE VIS EN PANNE

DEMANDES GENERALES
a) L’outil de dosage démarre sans problèmes même après des longues périodes d’inactivité?
b) Il semble que les conditions atmosphériques contribuisent au malfonctionnement?
c) Il faut que le doseur travaille de manière parfaitement horizontale.
d) Il faut que la bouche de sortie soit libre.

CONTROLE DE LA TREMIE
a) La trémie doit être plus petite que 100 litres.
b) La trémie est équipée d’un déflecteur casse-voûte?
c) La trémie est équipée d’un système de fluidification, d’un vibrateur ou d’un percuteur?

CONTROLE MOTEUR ELECTRIQUE
a) Est-ce qu’il y a la possibilité de variations de courant d’alimentation à cause d’un démarrage de divers appareils au même temps?
b) L’installation est équipée d’un générateur de courant?
c) Contrôler si le moteur reçoit du courant!
d) Contrôler si le moteur est connecté correctement et si les fils sont fixés bien aux bornes.
e) Contrôler le réglage thermique du moteur dans le pupitre général et le confronter avec les données sur la plaque du moteur.
f) Verificare il giusto senso di rotazione del motore elettrico!

CONTROLE DU MICRODOSEUR
a) Le matériau a adhéré à l’outil de dosage?
b) Est-ce qu’il y a des blocs de matériau qui obstruisent le dosage?
c) Est-ce que le corps en polymèr technique est ruiné?
d) S’assurer que les joints d’étanchéité ne perdent pas de matériau.
e) Durant le transport l’outil de dosage ne doit pas toucher le tube de décharge.

3) CONTROLE DU MATERIAU
a) Désignation du matériau
b) Densité? (kg/dm^3)
c) Granulométrie? (µm/mm)
d) Humidité? (%)
e) Fluidité? (faites couler le matériau sur une tôle en augmentant l’inclinaison de la même)
f) Compressibilité? (est-il possible de faire une “boule de neige”?)
g) Abrasivité? (est ce qu’il fait mal quand on frotte le matériau dans les doigts?)

CHECK-LIST IN CASO DI GUASTO

DOMANDE GENERALI
a) L’utensile di dosaggio parte senza problemi anche dopo lunghi periodi di sosta ?
b) Pare che le condizioni atmosferiche contribuiscano al malfunzionamento?
c) La macchina deve lavorare in modo perfettamente orizzontale.
d) La bocca di scarico deve essere libera.

CONTROLLO DELLA TRAMOGGIA
a) La tramoggia deve essere inferiore a 100 litri.
b) La tramoggia è equipaggiata con un deflettore rompiponte?
c) La tramoggia è equipaggiata con un impianto di fluidificazione, di un vibratore o martellatore ?

CONTROLLO MOTORE ELETTRICO
a) Sono possibili sbalzi di corrente di alimentazione a causa dell’avviamento contemporaneo di diverse macchine ?
b) L’impianto è equipaggiato con un generatore di corrente ?
c) Controllare se il motore riceve corrente!
d) Controllare se il motore è collegato correttamente e se i fili sono fissati bene ai morsetti!
e) Controllare la regolazione della termica del motore nel quadro generale e confrontarla con i dati sulla targhetta del motore!
f) Verificare il giusto senso di rotazione del motore elettrico!

CONTROLLO DEL MICRODOSATORE
a) Il materiale si è attaccato all’elica di dosaggio?
b) Ci sono dei blocchi di materiale che ostruiscono il trasporto?
c) Il corpo in tecnopolimero si è rovinato?
d) Accertarsi che le tenute non perdano materiale.
e) Durante il trasporto l’elica non deve toccare il tubo di scarico.

CONTROLLO DEL PRODOTTO
a) denominazione del prodotto ?
b) densità ? (kg/dm^3)
c) granulometria ? (µm/mm)
d) umidità? (%)
e) scorrevolezza ? (fare scorrere il materiale su una lamiera aumentando lentamente l’inclinazione!)
f) comprimibilità ‘ (è possibile fare una “palla di neve”?)
g) abrasività ? (fa male quando si sfrega il prodotto tra le dita ?)

WAM®

WAMGROUP

The manufacturer:

WAMGROUP S.p.A.

located in

Strada degli Schiocchi, 12 - I-41100 Modena (Mo) - Italy

under its own responsibility declares that:

MBF

Declaration Of Incorporation Of Partly Completed Machinery Annex II B 2006/42/CE Directive

comply with the RES Directive 2006/42/EC
of the European Parliament and the Council of 17 May 2006 on machinery

1.1.1. - Definitions
1.1.2. - Principles of safety integration
1.1.3. - Materials and products
1.1.5. - Design of machinery to facilitate its handling
1.3.1. - Risk of loss of stability
1.3.2. - Risk of break-up during operation
1.3.3. - Risks due to falling or ejected objects
1.3.4. - Risks due to surfaces, edges or angles
1.3.7. - Risks related to moving parts
1.3.8. - Choice of protection against risks arising from moving parts
1.3.9. - Risks of uncontrolled movements
1.5.4. - Errors of fitting
1.5.5. - Extreme temperatures
1.5.6. - Fire
1.5.7. - Explosion
1.5.8. - Noise
1.5.9. - Vibrations
1.5.13. - Emissions of hazardous materials and substances
1.5.15. - Risk of slipping, tripping or falling
1.6.1. - Machinery maintenance
1.6.2. - Access to operating positions and servicing points
1.6.4. - Operator intervention
1.6.5. - Cleaning of internal parts
1.7.1. - Information and warnings on the machinery
1.7.2. - Warning of residual risks
1.7.4. - Instructions

and, where applicable, the requirements imposed by the following EC Directives
Directive 2004/108/EC of the European Parliament and the Council of 15 December 2004 on the approximation of the laws of the Member States relating to electromagnetic compatibility.
Directive 2006/95/EC of the European Parliament and the Council of 12 December 2006 on the approximation of the laws of the Member States relating to electrical equipment designed for use within certain voltage limits.

The relevant technical documentation is compiled in accordance with Annex VII B of the Machinery Directive 2006/42/EC
Harmonized standards, national standards and technical regulations in question:
EN ISO 12100-1: 2005 EN ISO 12100-2: 2005

The signing company is committed to provide, in response to a reasoned request by national authorities, relevant information on products covered by this declaration, without prejudice to the rights of intellectual property of the manufacturer. The information will be transmitted directly to the national authorities having requested.

It's forbidden to operate all these products before the machine, in which they will be installed, is declared in conformity with 2006/42/EEC AND SUBSEQUENT AMENDMENTS

Strada degli Schiocchi, 12 - I-41100 Modena (Mo) - Italy, 01.01.2010

WAM®

WAMGROUP

Der Hersteller:

WAMGROUP S.p.A.

mit Sitz in

Strada degli Schiocchi, 12 - I-41100 Modena (Mo) - Italien

erklärt unter eigener Verantwortung wie folgt:

MBF

EINBAUERKLÄRUNG für unvollständige Maschinen gem. Anhang II B der MRL 2006/42/EG

Diese Produkte entsprechen den Anforderungen der Maschinenrichtlinie 2006/42/EG
des europäischen Parlamentes und des Rates vom 17. Mai 2006

1.1.1. - Begriffsbestimmungen
1.1.2. - Grundsätze für die Integration der Sicherheit
1.1.3. - Materialien und Produkte
1.1.5. - Konstruktion der Maschine im Hinblick auf die Hanhabung
1.3.1. - Risiko des Verlustes der Standsicherheit
1.3.2. - Bruchrisiko beim Betrieb
1.3.3. - Risiken durch herabfallende oder herausgeschleuderte Gegenstände
1.3.4. - Risiken durch Oberflächen, Kanten und Ecken
1.3.7. - Risiken durch bewegliche Teile
1.3.8. - Wahl der Schutzeinrichtungen gegen Risiken durch bewegliche Teile
1.3.9. - Risiko unkontrollierter Bewegungen
1.5.4. - Montagefehler
1.5.5. - Extreme Temperaturen
1.5.6. - Brand
1.5.7. - Explosion
1.5.8. - Lärm
1.5.9. - Vibrationen
1.5.13. - Emission gefährlicher Werkstoffe und Substanzen
1.5.15. - Ausrutsch-, Stolper- und Sturzrisiko
1.6.1. - Wartung der Maschine
1.6.2. - Zugang zu den Bedienungsständen und den Eingriffspunkten für die Instandhaltung
1.6.4. - Eingriffe des Bedienungspersonals
1.6.5. - Reinigen innen liegender Maschinenteile
1.7.1. - Informationen und Warnhinweise an der Maschine
1.7.2. - Warnung vor Restrisiken
1.7.4. - Betriebsanleitung

Wo anwendbar wurden die Anforderungen folgender EG Richtlinien erfüllt
Richtlinie 2004/108/EG des Europäischen Parlaments und des Rates vom 15. Dezember 2004 zur Angleichung der Rechtsvorschriften der Mitgliedstaaten über die elektromagnetische Verträglichkeit.
Richtlinie 2006/95/EG des Europäischen Parlaments und des Rates vom 12. Dezember 2006 zur Angleichung der Rechtsvorschriften der Mitgliedstaaten betreffend elektrische Betriebsmittel zur Verwendung innerhalb bestimmter Spannungsgrenzen.

Die speziellen technischen Unterlagen gem. Anhang VII B der MRL 2006/42/EG wurden erstellt.
Folgende harmonisierte Normen, nationale Normen und technische Vorschriften fanden Anwendung:
EN ISO 12100-1: 2005 EN ISO 12100-2: 2005

Das ausstellende Unternehmen ist verpflichtet, die technischen Unterlagen für diese Produkte auf begründetes Verlangen den Marktaufsichtsbehörden, unbeschadet der Rechte am geistigen Eigentum des Herstellers, zur Verfügung zu stellen. Die Unterlagen werden direkt an die anfordernde Behörde gesandt.

Es ist verboten diese Produkte in Betrieb zu nehmen, bevor die Maschine, in welche diese eingebaut werden, den Anforderungen der MRL entspricht und die EG Konformitätserklärung gem. MRL 2006/42/EG und nachfolgenden Änderungen vorliegt.

WAM®

All the products described in this catalogue are manufactured according to **WAMGROUP S.p.A. Quality System procedures**. The Company's Quality System, certified in July 1994 according to International Standards **UNI EN ISO 9002** and extended to the latest release of **UNI EN ISO 9001**, ensures that the entire production process, starting from the processing of the order to the technical service after delivery, is carried out in a controlled manner that guarantees the quality standard of the product.

*Alle in diesem Katalog beschriebenen Produkte werden gemäß dem **Qualitätssystem der WAMGROUP S.p.A.** hergestellt. Das im Juli 1994 gemäß der internationalen Norm **UNI EN ISO 9002** und auf die neueste Version der **UNI EN ISO 9001** erweiterte, zertifizierte Qualitätssystem der Firma gewährleistet, dass der gesamte Produktionsprozess von der Auftragsbearbeitung bis zum technischen Kundendienst nach Lieferung in kontrollierter Art und Weise erfolgt, so dass der Qualitätsstandard des Produkts gewährleistet ist.*

Tous les produits décrits dans ce catalogue sont fabriqués selon les procédures du **Système de Qualité de WAMGROUP S.p.A.**, certifié en Juillet 1994 selon les normes internationales **UNI EN ISO 9002** et étendu à la dernière version de la norme **UNI EN ISO 9001**. Cela garantit que le processus de production, à partir de la gestion de la commande au service technique après-vente, est effectué de manière contrôlée garantissant la norme de qualité du produit.

*Tutti i prodotti descritti nel catalogo sono stati realizzati secondo le **procedure del Sistema Qualità di WAMGROUP S.p.A.** Il Sistema Qualità aziendale, certificato dal luglio 1994 in conformità alle normative internazionali **UNI EN ISO 9002** e successivamente esteso all' ultima versione delle normative **UNI EN ISO 9001**, garantisce che l'intero processo produttivo, dalla formulazione dell'ordine fino all'assistenza tecnica dopo la consegna, si svolga secondo modalità controllate che garantiscono lo standard qualitativo del prodotto.*

ORDERING OF SPARE PARTS
To identify the spare parts refer to the following tables.
To order spare part either indicate the part code or the microdoseur, the item number and part description, as well as the required quantity.
Kits and sets are only supplied entirely.
For any further information plase.

ERSATZTEILBESTELLUNGEN
Zur Identifikation der Ersatzteile auf nachfolgende Tabelle Bezug nehmen.
Zur Ersatzteilbestellung ist es ausreichend, die Produktionsnummer des Mikrodosierers, die Position des Teils in der Ersatzteilliste und die gewünschte stückzahl.

COMMANDE DE PIECES DE RECHANGE
Pour identifier les pièces de rechange voyez le tableau suivant.
Pour commander des pièces de rechange il est suffisant d'indiquer le numéro matriculaire du microdoseur, la position de la pièce et la quantité désidérée.
Les groupes composants du microdoseur normalement sont vendus intégralement.
Les pièces sont aussi disponibles séparément. En tel cas s'adresser à notre Bureau de Service de Pièces de Rechange.

ORDINAZIONE DEI PEZZI DI RICAMBIO
Per l'identificazione dei pezzi di ricambio vedi tabelle riportate qui a seguito.
Per l'ordinazione dei pezzi di ricambio è sufficiente indicare il numero di matricola del microdosatore, la posizione del pezzo e la quantità voluta.
I gruppi componenti del microdosatore sono normalmente venduti integralmente.
Sono comunque disponibili separatamente i particolari :in tale caso rivolgersi al ns. Uff. Ricambi.

A) Steel fabricated parts and bearing assemblies.
Please indicate serial No. of the MBW, wich you read on side wall, and copy page No. and item No. (or letter) as well as the description of the part from the catalogue.

A) Stahlbauteile und Lagereinheiten.
Folgende Angaben sind hierfür erforderlich: die Produktions- Nr. der MBF; die Seitenzahl und die entsprechende Positionsnummer, bzw. der Positionsbuchstabe und die Teilebezeichnung; die Mengenangabe, wobei auf die in der Preisliste angegebene, jeweilige Mindest-Abnahmemenge zu achten ist.

A) Pièces de charpente et paliers
Quand passez une commande de pìeces de rechange, nous vous prions de comuniquer le N. de fabrication du MBF, le N. de la page, de la position et la désignation de la pièce, la quantitè désirée et tenant compte de la quantité minimum dans la liste de prix.

A) Pezzi di carpenteria e di supporteria
All'ordine sono da comunicare il N° matricolare del MBF, il N° di pagina, il N° o la lettera di posizione e la descrizione del pezzo nonchè la quantità richiesta tenendo conto delle quantità minime riportate nel listino.

B) Gear Reduction Units and Eletric Motors
Instead of the serial No. of the MBW indicate the serial No. of the gear reduction unit or of the electric motor and add the information requested under item A.
Parts not included in the price list cannot be supplied. These are:
1) Norm parts if not included in the kids
2) Item numbers in brackets ( )i. e. single parts of the kits.

Indicate the quantity of parts required (see minimum supply in the price list).

B) Getriebeeinheiten und Elektro Motoren
Anstelle der Produktions- Nr. der MBF ist die Produktions-Nr. des Getribes bzw. des E- Motors anzugeben.
Ansonsten sind die unter Punkt A bereits genannten Angaben hinzuzufügen. In der Preisliste nicht aufgeüfhrte Positionen sind nicht lieferbar. Im einzelnen sind dies:
1) Normteile, sofern die Montagesätze diese nicht beinhalten
2) in Klammern gesetzte Positionen ( ), bzw. Einzelteile zu den Montagesätzen.

B) Reducteurs et moteurs électriques
Au lieu du N. de fabrication du MBF il faut indiquer celui du reducteur ou du moteur. Ensuite ajoutez l'information demande sous la lettre A. Les pièces qui ne sont pas comprises dans la liste de prix ne peuvent pas être fournies. En particulier ce sont:
1) Les pièces commerciales à normes européenes si pas comprises dans les kits
2) Les positions entre parenthsès ( ), c' est à dire les composants des kits.

Avant le passage d'une commande vérifier les quantités minimum dans la liste de prix.

B) Testate motrici e motori elettrici
Al posto del N° matricolare del MBF, indicare quello della testata motrice o del motore elettrico. Quindi aggiungere le altre informazioni richieste sotto la lettera A.
I pezzi non compresi nel listino prezzi non possono essere forniti.
In particolare sono:
1) pezzi a norme se non compresi nei kits
2) numeri di posizione tra parentesi ( ), cioè singoli componenti dei kits.

Prima di passare un ordine verificare la quantità minima indicata nel listino prezzi.
Sono valide le ns Condizioni Generali di vendita.

CATALOGUE No. **EXT.096.--.M.4L**			
ISSUE **A8**	CIRCULATION **100**	LATEST UPDATE **12.13**	

All the products described in this catalogue are manufactured according to **WAMGROUP S.p.A. Quality System procedures**. The Company's Quality System, certified in July 1994 according to International Standards **UNI EN ISO 9002** and extended to the latest release of **UNI EN ISO 9001**, ensures that the entire production process, starting from the processing of the order to the technical service after delivery, is carried out in a controlled manner that guarantees the quality standard of the product.

*Alle in diesem Katalog beschriebenen Produkte werden gemäß dem **Qualitätssystem der WAMGROUP S.p.A.** hergestellt. Das im Juli 1994 gemäß der internationalen Norm **UNI EN ISO 9002** und auf die neueste Version der **UNI EN ISO 9001** erweiterte, zertifizierte Qualitätssystem der Firma gewährleistet, dass der gesamte Produktionsprozess von der Auftragsbearbeitung bis zum technischen Kundendienst nach Lieferung in kontrollierter Art und Weise erfolgt, so dass der Qualitätsstandard des Produkts gewährleistet ist.*

Tous les produits décrits dans ce catalogue sont fabriqués selon les procédures du **Système de Qualité de WAMGROUP S.p.A.**, certifié en Juillet 1994 selon les normes internationales **UNI EN ISO 9002** et étendu à la dernière version de la norme **UNI EN ISO 9001**. Cela garantit que le processus de production, à partir de la gestion de la commande au service technique après-vente, est effectué de manière contrôlée garantissant la norme de qualité du produit.

*Tutti i prodotti descritti nel catalogo sono stati realizzati secondo le **procedure del Sistema Qualità di WAMGROUP S.p.A.** Il Sistema Qualità aziendale, certificato dal luglio 1994 in conformità alle normative internazionali **UNI EN ISO 9002** e successivamente esteso all' ultima versione delle normative **UNI EN ISO 9001**, garantisce che l'intero processo produttivo, dalla formulazione dell'ordine fino all'assistenza tecnica dopo la consegna, si svolga secondo modalità controllate che garantiscono lo standard qualitativo del prodotto.*

ADDRESS OF LOCAL DEALER OR SERVICE POINT

ANSCHRIFT DES LOKALEN HÄNDLERS ODER KUNDENDIENSTES

ADRESSE DU REVENDEUR OU DU SERVICE APRES-VENTE LOCAL

INDIRIZZO RIVENDITORE O PUNTO DI ASSISTENZA LOCALE

MACHINE IDENTIFICATION

Refer to order code in acknowledgment of order, in invoice and on packaging to identify equipment or on the label applied on the package or on the plate affixed directly on the machine..

IDENTIFIKATION DER MASCHINE

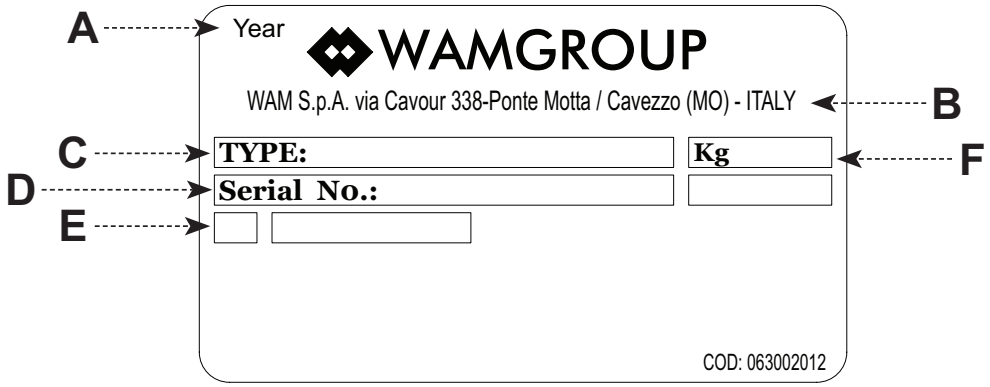
Zur korrekten Identifikation des Geräts auf den Code Bezug nehmen, der sich in der Auftragsbestätigung, der Rechnung und dem Aufkleber auf der Verpackung oder dem Schild auf der Maschine befindet.

IDENTIFICATION DE LA MACHINE

Pour identifier correctement la machine, vous devez vous référer au code qui se trouve sur la confirmation de commande, sur la facture ou sur l'étiquette apposée sur l'emballage et sur la plaque appliquée directement sur la machine.

IDENTIFICAZIONE DELLA MACCHINA

Per una corretta identificazione della macchina, bisogna fare riferimento al codice che si trova sulla conferma d'ordine, sulla fattura o sulla etichetta posta sull'imballo e sulla targhetta direttamente applicata sulla macchina.



Identification plate of machine
The plate is affixed on machine.
A) Year of manufacture
B) Manufacturer's identification
C) Type of machine
D) Serial No.
E) Progressive number of section
F) Weight of the machine

Schnecken-Typenschild
Auf jedem Schneckenteil befindet sich ein identisches Typenschild.
A) Baujahr
B) Herstelleridentifikation
C) Schneckentyp
D) Serien-Nr.
E) Schneckenteil Nr.
F) Gewicht Schnecke

Plaque vis
Sur chaque tronçon de equipement il y a une plaque identique.
A) Année
B) Identification du constructeur
C) Type de equipement
D) N° de série
E) Tronçon de equipement N°
F) Poids de l'equipement

Targa identificazione della macchina
La targa è applicata sulla macchina o se e composta in più sezioni su ogni sezione.
A) Anno di fabbricazione
B) Identificazione del costruttore
C) Tipo di macchina
D) Numero di serie
E) Numero progressivo della sezione
F) Peso della macchina

SCOPE AND IMPORTANCE OF THE MANUAL

This manual, prepared by the manufacturer, forms an integral part of the FIBC UNLOADER; it must therefore accompany of the FIBC UNLOADER right up to its final scrapping, and must be available ready at hand for consultation by the operators concerned and those in charge of operations at the work site. If the machine changes hands, this manual must be handed over to the new owner, as part of the SBB supply. Before carrying out any operation on or using the SBB, the personnel concerned must have read this manual carefully and completely. If the manual is lost, or in such a condition as to make it illegible, download a new copy from the internet site www.wamgroup.com, and check the date of the last revision. This manual provides warnings and indications concerning the safety regulations for preventing accidents at the work site. However, the operators MUST scrupulously follow the safety regulations meant for them by the existing legislation.
Modifications to the safety regulations made over time must be integrated and implemented.

ZWECK UND BEDEUTUNG DES HANDBUCHS

Dieses vom Hersteller erstellte Handbuch ist integrierender Teil der BIG-BAG Entleerstation.. Daher muss es der BIG-BAG Entleerstation unbedingt folgen, bis dieser zerlegt bzw. verschrottet wird. Es muss zudem einfach zu finden sein, wenn die betroffenen Bediener oder die Baustellenleitung in ihm nachschlagen wollen. Bei einem Besitzerwechsel des SBB muss das Handbuch dem neuen Besitzer als normale Bestückung des SBB ausgehändigt werden. Bevor irgendwelche Arbeiten an oder mit dem Austragboden SBB ausgeführt werden, müssen die betreffenden Personen dieses Handbuch unbedingt mit großer Aufmerksamkeit durchgelesen haben. Falls das Handbuch verloren geht oder unleserlich geworden ist, kann eine neue Kopie von den Internetseiten unter www.wamgroup.com heruntergeladen werden, nachdem man das Datum der letzten Aktualisierung des Handbuchs geprüft hat. Dieses Handbuch liefert Hinweise und Angaben zu den Sicherheits- und Unfallverhütungsbestimmungen am Arbeits-platz. Die Sicherheitsbestimmungen, die laut den geltenden Normen vom Bedienungspersonal zu beachten sind, müssen zu jedem Zeitpunkt beachtet wer-den.
Etwaige Änderungen der Sicherheitsbestimmungen, die im Laufe der Zeit vorgenommen werden, sind immer zu erfassen und umzusetzen.

BUT ET IMPORTANCE DU MANUEL

Le présent Manuel, rédigé par le constructeur, fait partie intégrante de la fourniture du vide BIG-BAG. Il doit absolument suivre le vide BIG-BAGS jusqu'à son démantèlement et être à portée de la main pour une consultation rapide de la part des opérateurs concernés et par la direction des travaux du chantier. En cas de changement de propriété de la machine, le manuel doit être remis au nouveau propriétaire, comme équipement du SBB.
Avant d'effectuer une quelconque opération avec ou sur le SBB, le personnel concerné doit absolument et obligatoirement avoir lu très attentivement le présent manuel. Si le manuel est égaré, abîmé de manière à ne plus être lisible, une copie doit être téléchargée à partir du site internet www.wamgroup.com en vérifiant la date de la dernière mise à jour. Le présent manuel fournit les recommandations et les indications concernant les consignes de sécurité pour la prévention contre les accidents du travail. Dans tous les cas les consignes de sécurité conformément aux normes en vigueur doivent être observée avec la plus grande attention par les différents opérateurs.
Les modifications éventuelle des consignes de sécurité devront être adoptées et mises en oeuvre.

SCOPO ED IMPORTANZA DEL MANUALE

Il presente manuale, redatto dal costruttore, è parte integrante del corredo dello svuota BIG-BAG; come tale deve assolutamente seguire lo svuota BIG-BAG fino al suo smantellamento ed essere facilmente reperibile per una rapida consultazione da parte degli operatori interessati e della direzione lavori del cantiere. In caso di cambio di proprietà della macchina, il manuale deve essere consegnato alla nuova proprietà, quale corredo dello stesso SBB. Prima di eseguire qualsiasi operazione con, o sul SBB, il personale interessato deve assolutamente ed obbligatoriamente aver letto con la massima attenzione il presente manuale. Qualora il manuale venga smarrito, sgualcito e tale da non essere leggibile, si deve scaricare una nuova copia dal sito internet www.wamgroup.com e verificarne la data dell'ultimo aggiornamento. Il presente manuale fornisce avvertenze ed indicazioni relative alle norme di sicurezza per la prevenzione degli infortuni sul lavoro. Vanno comunque, ed in ogni caso, osservate con il massimo scrupolo da parte dei vari operatori le norme di sicurezza poste a loro carico dalle vigenti normative.
Eventuali modifiche delle norme di sicurezza che nel tempo dovessero aver luogo, dovranno essere recepite ed attuate.

The basic features of the machine being unchanged, the manufacturer reserves the right to make modifications to components, parts and accessories, which he considers as suitable for improving the product or for structural or commercial requirements, at any moment, without any obligation to updating this manual immediately.

Auch wenn die wesentlichen Eigenschaften der beschriebenen Geräte unverändert bleiben, behält der Hersteller sich das Recht vor, Änderungen an Organen, Einzelteilen und dem Zubehör vorzunehmen, die er von Fall zu Fall als angemessen betrachtet, um das Produkt zu verbessern, oder wenn die Konstruktion oder der Vertrieb dies verlangen, ohne dazu gezwungen zu sein, diese Veröffentlichung immer sofort auf den neuesten Stand zu bringen.

Sans préjudice des caractéristiques principales des machines décrites, le constructeur se réserve le droit d'apporter les modifications aux organes, pièces et accessoires qu'il retient avantageuses pour l'amélioration du produit ou pour des exigences de fabrication ou commerciale, à tout moment et sans l'obligation de mettre à jour immédiatement cette publication.

Ferme restando le caratteristiche essenziali delle macchine descritte, il costruttore si riserva il diritto di apportare modifiche di organi, dettagli ed accessori, che riterrà convenienti per il miglioramento del prodotto o per esigenze di carattere costruttivo o commerciale, in qualunque momento e senza impegnarsi di aggiornare tempestivamente questa pubblicazione.

The FIBC Dischargers (SBB) are designed and constructed for carrying out their function in compliance with the following limits of use:

Maximum operating temperature:
+40°C in continuous mode

Minimum operating temperature:
-20°C

Height of FIBC:
- Min. 600mm
- Max. 2000mm
(for models S and M)

- Any
(for models T and C)

USE
- The FIBC unloader is NOT designed for operating in potentially explosive atmospheres or with materials that could be hazardous by contact and/or inhalation, or else dangerous from a bacteriological or viral viewpoint.

If the machine has to cater for similar requirements, please contact the manufacturer.

Die Big-Bag-Entleerstationen (SBB) wurden entwickelt und werden hergestellt, um ihre Funktion unter Berücksihtigung folgender Einsatzeinschrämkungen zu erfüllen:

Max. Betriebstemperatur:
+40°C bei Dauerbetrieb

Niedrigste Betriebstemperatur:
-20°C

Höhe der Big-Bags:
- Min. 600 mm
- Max. 2000 mm
(für Modelle S und M)

- Jede beliebige
(für Modelle T und C)

GEBRAUCHSANGABEN
- Diese Big-Bag-Entleerstationen sind NICHT zum Einsatz in explosionsgefährdeten Bereichen oder zum Betrieb mit Schütt-gütern bestimmt, die bei Berüh-rung und/oder Einatmen schäd-lich sind oder die unter bakte-riologischen oder virologischen Gesichtspunkten gefährlich sind.

Wenn die Maschinen unter solchen Bedingungen zum Einsatz kommen sollen, ist es vorgeschrieben, Kontakt mit dem Hersteller aufzunehmen.

Les vide BIG BAG (SBB) ont été conçus et projetés pour assurer leur fonction d'utilisation dans le respect des limites d'emploi suivantes :

Température maximum de travail :
+40°C en continu

Température minimum de travail :
-20°C

Hauteur des BIG-BAG:
- Min. 600 mm
- Max. 2000 mm
(pour modèles S et M)

- Quelconque
(pour modèles T et C)

MODES D'EMPLOI
- Le vide BIG-BAG N'A PAS été conçu pour travailler dans des atmosphères explosibles, ni avec des matières nocives au contact ou à l'inhalation, ou encore dangereuses du point de vue bactériologique et viral :

Quand la machine doit être utilisée dans ces conditions, il faut contacter le fabricant.

Gli svuota BIG-BAG (SBB) sono stati studiati e progettati per assolvere alla loro funzione d'uso nel rispetto dei seguenti limiti di impiego:

Temperatura massima di lavoro:
+40°C in continuo

Temperatura minima di lavoro:
-20°C

Altezza dei BIG-BAG:
- Min. 600 mm
- Max. 2000 mm
(per modelli S e M)

- Qualsiasi
(per modelli T e C)

INDICAZIONI PER L'USO
- Lo svuota BIG-BAG NON è statoprogettato per operare in atmosfere potenzialmente esplosive o con materiali nocivi al contatto e/o inalazione, oppure pericolosi dal punto di vista batteriologico e virale.

Quando la macchina deve assolvere a queste esigenze è d'obbligo contattare il Costruttore.

The FIBC UNLOADERS ARE NOT designed for operating in potentially explosive atmospheres or with materials that are harmful on contact and/or when inhaled, or hazardous from a bacteriological or viral point of view.
The manufacturer must be informed if the machine is required to satisfy these requirements.
The FIBC UNLOADER must be installed with sufficient clearance around it to allow for normal assembly/disassembly, cleaning and maintenance operations.
It is also forbidden to start up the machine before the plant in which it is installed has been declared as conforming to the provisions of Machine Directive 23/07/1998 (2006/42/CE). In this regard, the installer must make provision for installing suitable personal and public protection devices to avoid damage to objects and harm to persons in the event of breakage.
Before carrying out any operation, make sure the machine is in safety condition.

Die BIG-BAG Entleerstation sind NICHT zum Einsatz in explosionsgefährdeter Umgebung oder mit bei Berührung und/oder beim Einatmen schädlichen oder unter dem bakteriologischen oder virologischen Gesichtspunkt gefährlichen Substanzen ausgelegt.
Wenn die Maschine unter solchen Bedingungen arbeiten muss, ist es unbedingt erforderlich, den Hersteller davon zu unterrichten.
Die BIG-BAG Entleerstation ist so zu installieren dass ringsum ausreichend freier Platz bleibt, um die normalen Ein- und Ausbauarbeiten, die Reinigung und die Wartung auszuführen.
Es ist außerdem verboten, die Maschine in Betrieb zu nehmen, bevor die Anlage, in die sie installiert werden, den Bestimmungen der Maschinen-Richtlinie vom 123.07.1998 (2006/42/EG) konform erklärt worden ist. In diesem Rahmen ist es Pflicht des Anlagenbauers/Installateurs, die persönlichen bzw. der Allgemeinheit dienenden Schutzausrüstungen vorzubereiten und zu installieren, um zu vermeiden dass im Bruchfall Personen- oder Sachschäden entstehen.
Bevor man irgendeinen Eingriff an der Maschine ausführt, ist zu überprüfen, dass diese in einen sicheren Zustand versetzt worden ist.

Les vide BIG-BAG N'ONT pas été conçus pour travailler dans les atmosphères potentiellement explosibles, avec des matériaux nocifs au contact et/ou à l'inhalation ou encore dangereux du point de vue bactériologique et viral.
Quand la machine doit satisfaire ces exigences il est obligatoire d'en informer le constructeur.
Le vide BIG-BAG devra être installé avec un espace circonstant suffisant pour effectuer les opérations ordinaires de montage/démontage, nettoyage et entretien.
Il est interdit, en outre, de mettre en service la machine avant que l'installation dans laquelle il sera monté n'ait été déclarée conformes aux dispositions de la Directive Machines du 23/07/1998 (2006/42/CE).
Dans ce cadre, le technicien installateur devra monter les équipements de protection individuels et collectifs, afin d'éviter les dommages aux choses ou aux personnes en cas de ruptures.
Avant d'effectuer une quelconque intervention sur la machine s'assurer que celle-ci a été placée en condition de sécurité.

Gli svuota BIG-BAG NON sono stati progettati per operare in atmosfere potenzialmente esplosive o con materiali nocivi al contatto e/o all'inalazione oppure pericolosi dal punto di vista batteriologico e virale.
Quando la macchina deve assolvere a queste esigenze è d'obbligo informare il costruttore.
Lo svuota BIG-BAG dovrà essere installato con uno spazio circostante sufficiente per effettuare le normali operazioni di montaggio/smontaggio, pulitura e manutenzione.
È vietato, inoltre, mettere in funzione la macchina prima che l'impianto nel quale venga installato sia stato dichiarato conforme alle disposizioni della Direttiva Macchine 23/07/1998 (2006/42/CE). In quest'ambito è cura dell'impiantista/installatore predisporre ed installare gli idonei dispositivi di protezione individuali e collettivi al fine di evitare danni a cose o persone in caso di rotture.
Prima di effettuare un qualsiasi intervento sulla macchina assicurasi che questa sia messa in sicurezza.

In this manual, from here onwards **"setting the machine in safety conditions"** will indicate the following operations:
- Make sure the machine is disconnected from all electric power supply sources.
- Make sure the machine is completely stopped
- Provide sufficient lighting around the machine operating area (the operators may be provided with electric lamps if necessary).
- Wait for the powder mass inside to settle down completely, and then stop the machine.

In diesem Handbuch verstehen wir unter dem Begriff **„das Gerät in einen sicheren Zustand versetzen"** folgendes:
- Sicherstellen, dass das Geräte von allen elektrischen Versorgungsquellen getrennt ist.
- Sicherstellen, dass die Maschine ganz still steht.
- Dafür sorgen, dass der Bereich rings um das Gerät in angemessener Weise beleuchtet ist (eventuell indem man das Personal mit elektrischen Lampen ausstattet).
- Sicherstellen, dass die Staubmasse innerhalb sich ganz abgelagert hat und sich daher nicht mehr bewegt.

Dans le présent manuel la consigne **"mettre la machine en sécurité"** indique les opérations suivantes :
- S'assurer que la machine est débranchée de toutes les alimentations électriques.
- S'assurer que la machine est complètement arrêtée.
- Eclairer correctement la zone qui entoure la machine (en dotant éventuellement les opérateur de lampes électriques).
- Attendre que la masse de poussière contenue se soit entièrement déposée et donc arrêtée.

In seguito, nel presente manuale, indicheremo con la dicitura **"mettere in sicurezza la macchina"** le seguenti operazioni:
- Accertarsi che la macchina sia scollegata da tutte le alimentazioni elettriche.
- Accertarsi che la macchina sia completamente ferma.
- Provvedere ad illuminare correttamente la zona circostante alla macchina (eventualmente dotando gli operatori di lampade elettriche).
- Attendere che la massa di polvere contenuta all'interno sia completamente depositata e quindi ferma.

Before carrying out any operation on the machine (maintenance or cleaning), the operators must use suitable personal protection equipment:
- antistatic safety footwear (certified)
- antistatic protective clothing (certified)
- helmet
- antistatic, cut-proof gloves
- safety masks

In addition to these, use the safety devices specified in the safety chart of the product handled.

Für jede am Gerät durch-zuführende Arbeit wie Wartung und Reinigung muss das Personal mit den entsprechenden persönlichen Schutzausrüstungen (PSA) ausgestattet sein:
- Antistatische Sicherheitsschuhe (zertifiziert)
- Antistatische Schutzkleidung (zertifiziert)
- Schutzhelme
- Antistatische Schnittschutz-Handschuhe
- Atemschutzmasken.

Außerdem sind die Schutz-maßnahmen, die auf dem Sicherheitsdatenblatt des behandelten Produkts stehen, betroffen.

Pour toute opération à effectuer sur la machine (entretien et nettoyage), les opérateurs devront être munis des équipements de protection individuelle (EPI) :
- Chaussures de sécurité antistatiques (certifiées)
- Vêtements de protection antistatiques (certifiés)
- Casque
- Gants anticoupure antistatiques
- Maques de protection respiratoire

En outre les équipements de protection prévus par la fiche de sécurité du produit traité.

Per qualsiasi operazione da effettuarsi sulla macchina (manutenzioni e pulizia), gli operatori dovranno essere muniti degli appositi dispositivi di protezione individuale (DPI):
- Scarpe antinfortunistiche antistatiche (certificate)
- Indumenti protettivi antistatici (certificati)
- Casco
- Guanti antitaglio antistatici
- Mascherine protettive

Inoltre quei dispositivi di protezione previsti dalla scheda di sicurezza del prodotto trattato.

WARNINGS

The manufacturer shall be relieved of all responsibility concerning the safety of persons and objects and operations if the truck loading and unloading operations, transport, positioning at the worksite, use, repairs, maintenance are not carried out in conformity with the instructions in this manual.

Similarly the manufacturer shall not be responsible iif the FIBC is used:

- improperly;
- by unauthorized and/or unskilled personnel;
- with modifications to the original configuration;
- with spare parts that are not original;
- in a manner non conforming to existing standards and legisla tion;
- non conforming to the recom mendations in this manual or on the warning and hazard notices on the machine.

The user is obliged to carefully check that the work area is clear of obstacles, persons, and machines with potential risk, before carrying out any operation.

Lifting, transport, installation at the worksite, set-up, checking stability and operations, routine and extraordinary maintenance, etc. must be carried out by qualified authorized personnel according to the instructions in this manual and in compliance with the existing safety regulations.

When positioning the FIBC at the work site must be earthed.

- It is forbidden to carry out maintenance, repairs or modifications with the machine in operation.
- For every operation, it is compulsory to disconnect all the electric power supplies to the machine.
- It is forbidden to remove the guards and safeties present on the machine.
- Before startup, make sure all the guards are installed correctly.

HINWEISE

Der Hersteller betrachtet sich jeglicher Haftung hinsichtlich der Sicherheit von Personen, Sachen und Betrieb enthoben, falls das Auf- und Abladen vom Lkw, Transport, Aufstellung auf der Baustelle, Gebrauch, Reparaturen, Wartung etc. nicht gemäß der in diesem Handbuch beschriebenen Hinweise ausgeführt werden.

Gleichermaßen betrachtet der Hersteller sich in keinerlei Weise verantwortlich, falls die BIG-BAG Entleerstation wie folgt benutzt wird:

- bestimmungswidrig;
- durch Personal, das nicht befugt und/oder ausreichend angewiesen ist;
- mit Änderungen im Bezug zur ursprünglichen Konfiguration;
- mit Einbau von Ersatzteilen, die keine Originale sind;
- nicht entsprechend der augenblicklich geltenden Normen und Gesetze;
- nicht entsprechend der Empfehlungen dieses Hand buchs oder der Hinweis- und Warnschilder, die auf der Ma schine angebracht sind.

Der Anwender ist dazu verpflichtet, vor der Ausführung irgendeines Vorgangs sehr aufmerksam zu prüfen, dass der Arbeitsbereich frei von Hindernissen, Personen und Maschinen ist, die eine mögliche Gefahrenquelle darstellen.

Heben, Transport, Installation auf der Baustelle, Inbetriebnahme, Standsicherheits- und Funktion stests, regelmäßige und außeror dentliche Wartung etc. müssen durch qualifiziertes und befugtes Personal vorgenommen werden, das gemäß der Anweisungen, die in diesem Handbuch stehen, und unter Beachtung der geltenden Sicherheitsbestim mungen vorzugehen hat.

Bei der Aufstellung vor Ort muss die Big-Bag-Entleerstation geerdet werden.

- Es ist verboten, die laufende Maschine zu warten, zu reparieren oder zu ändern.
- Vor jedem Eingriff ist es unbedingt erforderlich, alle elektrischen Verbindungen der Maschine abzuklemmen.
- Es ist verboten, die Schutz- und Sicherheitseinrichtungen, die auf der Maschine vorhanden sind, zu entfernen.
- Vor der Inbetriebnahme sicherstellen, dass alle Schutzvorrichtungen korrekt installiert sind.

RECOMMANDATIONS

Le constructeur se considère dégagé de toute responsabilité concernant la sécurité des personnes, des choses et du fonctionnement si les opérations de chargement et de déchargement du camion, transport, positionnement sur chantier, utilisation, réparations, entretiens, etc. n'ont pas été effectuées conformément aux recommandations décrites dans cette notice d'instructions.

De même le constructeur ne pourra être considéré respon sable si le vide BIG-BAG est utilisé:

- de manière impropre;
- par du personnel non autorisé et/ ou pas suffisamment formé;
- avec des modifications par rapport à la configuration originale ;
- avec introduction de pièces détachées non d'origine ;
- de manière non conforme à la réglementation et à la législation en vigueur ;
- de manière non conforme aux recommandations fournies dans la présente notice ou par les plaques signalétiques apposées sur la machine.

L'utilisateur a l'obligation de vérifier avec la plus grande attention, avant d'effectuer une quelconque opération, que la zone de travail est dégagée de tout obstacle, personnes, machines pouvant représenter une source potentielle de danger.

Les opérations de soulèvement, le transport, le montage sur chantier, la mise en service, les vérifications de stabilité et de fonctionnement, les entretiens ordinaires et extraordinaires, etc. doivent être effectuées par du personnel qualifié et autorisé, lequel doit intervenir suivant les indications indiquées dans la présente notice d'instructions et dans le respect des normes de sécurité en vigueur.

Au moment du positionnement sur chantier le vide BIG BAG doit être relié électriquement à la terre.

- Il est interdit d'effectuer des opérations d'entretien, des réparations ou des modifications quand la machine est en marche.
- Avant toute opération il est obligatoire de débrancher toutes les alimentations électriques de la machine.
- Il est interdit d'enlever les protections et les sécurités présentes sur la machine.
- Avant la mise en marche s'assurer que toutes les protections sont montées correctement.

AVVERTENZE

Il costruttore si riterrà sollevato da qualsiasi responsabilità inerente la sicurezza delle persone, delle cose e di funzionamento qualora le operazioni di carico e scarico da autocarro, trasporto, posizionamento in cantiere, utilizzo, riparazioni, manutenzioni, ecc. non siano eseguite conformemente alle avvertenze descritte nel presente manuale.

Analogamente il costruttore non si riterrà in alcun modo responsabile qualora lo svuota BIG-BAG venga utilizzato:

- impropriamente;
- da personale non autorizzato e/o non sufficientemente addestrato;
- con modifiche rispetto alla configurazione originale;
- con inserimento di parti di ricambio non originali;
- non conformemente alla normativa e legislazione attualmente vigente;
- non conformemente a quanto raccomandato nel presente manuale o sulle targhette di avvertenza e pericolo applicata sulla macchina.

Per l'utente è fatto obbligo di verificare con la massima attenzione, prima di eseguire qualsiasi operazione, che la zona di lavoro sia libera da ostacoli, persone, macchine potenziali fonti di pericolo.

Le operazioni di sollevamento, trasporto, installazione in cantiere, la messa in funzione, le verifiche di stabilità e funzionamento, le manutenzioni ordinarie e straordinarie,ecc., devono essere svolte da personale qualificato ed autorizzato, il quale deve operare secondo le indicazioni riportate nel presente manuale e nel rispetto delle vigenti norme di sicurezza.

All'atto del posizionamento in cantiere lo svuota BIG-BAG deve essere collegato elettricamente a terra.

- É vietato manutenzionare, eseguire riparazioni o modifiche con la macchina in funzione.
- Prima di ogni operazione è obbligatorio scollegare tutte le alimentazioni elettriche della macchina.
- É vietato rimuovere le protezioni e le sicurezze presenti sulla macchina.
- Prima dell' avviamento assicurarsi che tutte le protezioni siano correttamente installate.

The FIBC in this catalogue (code SBB) are devices suitable for discharging bags of different shapes and sizes.
They are manufactured from shot-blasted, painted steel; on request, they may be supplied in 304 stainless steel, entirely or only the parts in contact with the product to prevent its contamination.
The numerous models and sizes of SBB available, together with the complete range of accessories make this equipment suitable for use in virtually all applications and industrial sectors and with different types of FIBCs: in fact, the hopper, which can also be supplied alone, is specially designed for optimising the flow of materials.

MACHINE CODE
- SBB

MACHINE TYPE
- FLEXIBLE INTERMEDIATE BULK CONTAINER UNLOADER

USE
- Emptying FIBCs of various sizes containing product in powder or granular form.

ADVANTAGES
- Equipment which can be assembled according to requirements.
- The model with hoist does not require the use of a forklift truck.
- The removable frame makes it possible to empty FIBCs 600 to 2000 mm in height.
- The operator is protected from falling FIBCs by the four posts of the frame.
- The FIBC valve can be accessed through the hatch.
- The pneumatic activators optimises emptying of FIBCs.

Die in diesem Katalog beschriebenen Big-Bag-Entleerstationen (Code SBB) sind Vorrichtungen, die zum Entleeren Big-Bags unterschiedlicher Form und Abmessungen geeignet sind.
Sie bestehen aus sandgestrahltem und lackiertem Stahl. Auf Anfrage sind sie auch entweder komplett oder, zur Verhinderung der Produktverunreinigung, nur in den produktberührenden Teilen aus Edelstahl 1.4301 lieferbar.
Die zahlreichen Modellvarianten der SBB in Bezug auf Abmessungen und das komplette Zubehörsortiment machen diese Geräte für praktisch jeden Einsatz in allen Industriezweigen und für unterschiedliche Big-Bag-Typen einsetzbar: Die Trichter, die auch separat lieferbar sind, sind so konstruiert, dass die Fließfähigkeit des Schüttguts optimiert wird.

MASCHINENCODE
- SBB

MASCHINENTYPE
- BIG-BAG ENTLEERSTATION

BENUTZUNG
- Entleeren von Big-Bags unterschiedlicher Größe mit staub- und granulatförmigen Produkten.

VORTEILE
- Leicht und schnell aufstellbares Gerät.
- Die Version mit Flaschenzug kann ohne Einsatz von Gabelstaplern verwendet wird.
- Der herausziehbare Rahmen ermöglicht das Entleeren von Big-Bags mit Höhen von 600 bis 2000 mm.
- Der Bediener ist gegen den eventuellen Absturz des Big-Bags durch die vier Ständer des Gestells geschützt.
- Die Klappe ermöglicht den Zugriff zum Ventil des Big-Bags.
- Die pneumatische Austraghilfe optimiert die Entleerung des Big-Bags.

Les vide BIG-BAG (code SBB) représentés dans ce catalogue sont des dispositifs qui servent à décharger des sacs de différentes formes et dimensions.
Ils sont réalisés en acier au carbone sablé et peint. Sur demande, ils peuvent être réalisés en acier inox 304, soit entièrement, soit uniquement les parties au contact du produit pour éviter de le contaminer.
Les nombreuses variantes de SBB en termes de modèle et dimensions disponibles, associées à une ample gamme d'accessoires, rendent ces machines utilisables pour n'importe quelle application pratiquement dans tous les secteurs industriels et avec différents types de BIG-BAG : en effet la trémie, qui peut être fournie même séparément, a été conçue spécialement pour optimiser la fluidité des produits.

CODE MACHINE
- SBB

TYPE DE MACHINE
- VIDE-SACS GRANDES DIMENSIONS

UTILISATION
- Vidage de GRANDS SACS de différentes dimensions avec des produits en poudre ou granulaires.

AVANTAGES
- Machine composée suivant les exigences.
- La version avec palan n'exige pas l'utilisation du chariot élévateur.
- Le châssis démontable permet de vide des sacs d'une hauteur de 600 à 2000 mm.
- Les opérateurs sont protégés contre la chute des sacs par quatre montants du châssis.
- Une trappe permet l' accès à la vanne du BIG BAG.
- Les activateurs pneumatiques optimisent le vidage du BIG BAG.

Gli svuota BIG-BAG (codice SBB) rappresentati in questo catalogo sono dispositivi idonei a scaricare sacchi di svariate tipologie per forme e dimensioni.
Sono realizzati in acciaio al carbonio sabbiato e verniciato; su richiesta comunque possono essere realizzati in AISI 304, sia interamente che solo nelle parti a contatto col prodotto per evitare contaminazioni dello stesso.
Le numerose varianti di SBB in termini di modello e dimensioni disponibili, unite ad una completa gamma di accessori, rendono queste macchine utilizzabili per qualsiasi applicazione in tutti i settori industriali e con diverse tipologie di BIG-BAG: infatti la tramoggia, che può essere fornita anche da sola, è stata accuratamente studiata per ottimizzare la scorrevolezza dei materiali.

CODICE MACCHINA
- SBB

TIPO MACCHINA
- SVUOTA BIG-BAG

FUNZIONE D'USO
- Svuotamento di BIG-BAG di varie dimensioni con prodotti in polvere o granulari.

VANTAGGI
- Macchina componibile a seconda delle esigenze.
- La versione con paranco non richiede l' utilizzo del carrello elevatore.
- Il telaio sfilabile permette di svuotare big bag con altezze da 600 a 2000 mm.
- Gli operatori sono protetti dall' eventuale caduta dei big bag dai quattro montanti del telaio.
- Attraverso il portello si accede alla valvola del BIG BAG.
- Gli attivatori pneumatici ottimizzano lo svuotamento del BIG BAG.

MODELS AVAILABLE

MODEL T:
UNLOADING HOPPER
- SBB._.125.T
- SBB._.150.T
Supplied separately, in two sizes, it is carefully designed to optimize the flowability of materials.
It comprises:
- seals made of material suitable for the type of use.
- adjustable weight motovi-brator.
- vent pipe with filter bag.
- finger mesh.
- inspection hatch with seal.
- damper supports.

MODEL C:
HOPPER WITH FEET
- SBB._.125.C
- SBB._.150.C
Thanks to its structure, there is plenty of space for using different systems for loading the FIBCs.
It comprises:
- a unloading hopper.
- supporting frame made of tubular elements having suitable size and thickness to ensure sturdiness and solidity.
- cross with pegs for hooking FIBC harness, lifting hooks and tubular elements for lift truck forks

MODEL S:
HOPPER WITH REMOVABLE FRAME
- SBB._.125.S
- SBB._.150.S
Athough it is identical as regards design and use, the difference lies in the size of the FIBCs which can be accepted.
These comprise:
- a unloading hopper.
- supporting tubular frame having size and thickness suitable to guarantee sturdiness and solidity.
- removable frame which makes it possible to adapt the Unloader for use with FIBCs of different heights.
- cross with pegs for hooking FIBC harness, lifting hooks and tubular elements for lift truck forks

LIEFERBARE MODELLE

MODELL T:
AUSLAUFTRICHTER
- SBB._.125.T
- SBB._.150.T
Wird separat geliefert; in zwei Größen erhältlich; ausgelegt, um optimalen Materialfluß zu gewährleisten.
Besteht aus:
- Dichtung aus dem Einsatz angepaßten Material.
- Vibrationsmotor mit einstellbaren Unwuchtmassen.
- Entlüftungsstutzen mit Filtersack.
- Schutzgitter.
- Inspektionsklappe mit Dichtung.
- Schwingungsdämpfende Träger.

MODELL C:
TRICHTER AUF STANDBEINEN
- SBB._.125.C
- SBB._.150.C
Läßt dank der besonderen Konstruktion viel Platz für Big-Bag-Handlingsyteme.
Besteht aus:
- Auslauftrichter.
- Traggestell aus Rohren mit solchen Abmessungen und Wandstärken, dass eine robuste und solide Bauweise gewährleistet wird.
- Kreuzteil mit Stiften zum Einhaken der Big-Bag-Gurte, Hubhaken und Rohre für die Gabeln des Staplers.

MODELL S:
TRICHTER MIT HERAUSZIEHBAREM GESTELL
- SBB._.125.S
- SBB._.150.S
Im Aufbau und im Einsatz identisch, jedoch geeignet für größere Big-Bags.
Besteht aus:
- Auslauftrichter.
- Rohrtragegestell in robu-ster Bauweise.
- Herausziehbarer Rahmen zur Anpassung des Geräts an verschiedene Big-Bag-Größen.
- Kreuzteil mit Stiften zum Einhaken der Big-Bag-Gurte, Hubhaken und Rohre für die Gabeln des Staplers.

MODELES DISPONIBLES

MODELE T:
TREMIE DE DÉCHARGEMENT
- SBB._.125.T
- SBB._.150.T
Fournie même seule, en deux dimensions, elle a été étudiée spécialement pour optimiser l' écoulement des produits.
Elle est composée de:
- joint en matière appropriée au secteur d' utilisation.
- motovibrateur à masses réglables.
- tube d' évent à manchon filtrant.
- grille de sécurité.
- trappe de visite avec joint.
- supports absorbe vibrations.

MODELE C :
TREMIE AVEC PIEDS
- SBB._.125.C
- SBB._.150.C
Grâce à sa conformation il laisse un espace ample à l'utilisateur des systèmes les plus variés de chargement du BIG BAG.
Composé de:
- trémie de dechargement.
- châssis de soutien réalisé en tubulaire aux dimensions et épaisseurs garantissant la robustesse et la solidité de la structure.
- croisillon à picots d' accrochage des bretelles BIG BAG, crochet de soulèvement et tubulaires pour fourches de chariot élévateur.

MODELE S :
TREMIE AVEC CHASSIS AMOVIBLE
- SBB._.125.S
- SBB._.150.S
Bien qu' étant identiques par composition et utilisation ils se différencient par les dimensions des SACS «BIG BAG» qu'ils peuvent accepter.
Ils sont composés de:
- trémie de dechargement.
- châssis réalisé en tubulaire aux dimensions et épaisseurs garantissant robustesse et solidité.
- châssis démontable pour permettre d' adapter la machine aux différentes hauteurs des BIG BAG.
- croisillon à picots d' accrochage des bretelles BIG BAG, crochet de soulèvement et tubulaires pour fourches de chariot élévateur.

MODELLI DISPONIBILI

MODELLO T:
TRAMOGGIA DI SCARICO
- SBB._.125.T
- SBB._.150.T
Fornita anche da sola, in due dimensioni, è stata accuratamente studiata per ottimizzare la scorrevolezza dei materiali.
E' composta da:
- guarnizione di tenuta in materiale idoneo al settore di impiego.
- motovibratore a masse regolabili.
- tubo sfiato aria con manica filtrante.
- griglia di sicurezza.
- portello di ispezione con relativa guarnizione.
- supporti antivibranti.

MODELLO C:
TRAMOGGIA CON PIEDI
- SBB._.125.C
- SBB._.150.C
Grazie alla sua conformazione lascia ampio spazio all' utilizzo dei più svariati sistemi di carico del BIG BAG.
Composto da:
- tramoggia di scarico.
- telaio di sostegno realizzato in tubolari di dimensioni e spessori tali da garantire robustezza e solidità.
- crociera con pioli di aggancio bretelle BIG BAG, gancio di sollevamento e tubolari per forche carrello elevatore.

MODELLO S:
TRAMOGGIA CON TELAIO SFILABILE
- SBB._.125.S
- SBB._.150.S
Pur essendo identici per composizione e funzione d' uso si differenziano per le dimensioni dei BIG BAG che possono accettare.
Sono composti da:
- tramoggia di scarico.
- telaio di sostegno realizzato in tubolari di dimensioni e spessori tali da garantire robustezza e solidità.
- telaio sfilabile per consentire di adattare la macchina alle diverse altezze dei BIG BAG.
- crociera con pioli di aggancio bretelle BIG BAG, gancio di sollevamento e tubolari per forche carrello elevatore.

MODEL M:
FRAME WITH MONORAIL
- SBB._.125.M

The special feature of this equipment lies in the fact that it does not require the use of a fork lift truck for external loading of FIBCs, as it is designed for use with its own hoist (not supplied) which makes it possible to operate independently during the various phases.
The equipment comprises:
- a unloading hopper.
- a supporting frame made of suitably sized tubular elements thick enough to guarantee the required sturdiness and solidity.
- a monorail for the hoist (hoist excluded)..
- cross with pegs for hooking the FIBC harness, lifting hooks and tubular elements for using a lift truck if necessary for handling FIBCs.

MODELL M:
GESTELL MIT EINSCHIENEN-BAHN
- SBB._.125.M

Die Besonderheit dieses Geräts besteht darin, daß es zum Aufladen des Big-Bags keinen Gabelstapler benötigt, weil das Gerät für die Installation einer eigenen Seilwinde ausgelegt ist (gehört nicht zum Lieferumfang), was in den verschiedenen Arbeitsphasen ein Höchstmaß an Autonomie bedeutet.
Besteht aus:
- Auslauf trichter.
- Rohrtragegestell in robuster Bauweise.
- Monoschiene für Seilwinde (Flaschenzug ausgenommen).
- Kreuzteil mit Stiften zum Einhaken der Big-Bag-Gurte, Haken zum Heben und Rohre für die eventuelle Benutzung eines Gabelstaplers zum Handling der Big-Bags.

MODELE M :
CHASSIS AVEC MONORAIL
- SBB._.125.M

Sa particularité est celle de ne pas exiger l' utilisation d'un chariot élévateur pour le chargement du BIG BAG extérieur car il est prévu pour être équipé d' un treuil (non de fourniture) qui permet une meilleure autonomie dans les différentes phases de travail.
Composé de:
- trémie de dechargement.
- châssis réalisé en tubulaire aux dimensions et épaisseurs garantissant robustesse et solidité.
- monorail pour palan (palan exclu).
- croisillon à picots d'accrochage des bretelles BIG BAG, crochet de soulèvement et tubulaires pour l'utilisation éventuelle d'un chariot élévateur pendant les phases de manutention des BIG BAG.

MODELLO M:
TELAIO CON MONOROTAIA
- SBB._.125.M

La sua particolarità è quella di non richiedere l' uso di un carrello elevatore per il carico BIG BAG esterno in quanto è predisposto per l' installazione di un proprio verricello (non di fornitura) che permette la più completa autonomia nelle varie fasi di lavoro.
Composto da:
- tramoggia si scarico.
- telaio di sostegno realizzato in tubolari di dimensioni e spessori tali da garantire robustezza e solidità.
- monorotaia per paranco (paranco escluso).
- crociera con pioli di aggancio bretelle BIG BAG, gancio di sollevamento e tubolari per l' eventuale utilizzo di un carrello elevatore durante le fasi di movimentazioni dei BIG BAG.

ACCESSORIES

- Hopper seal made of food- grade material.

- Pneumatic activators
  Materials featuring poor flowability do not flow out of the FIBC easily. It is therefore necessary to use pneumatic activators. These devices act directly at the bottom of the FIBC, causing lifting and lowering of the opposite corners to stimulate the flow of material compacted at the bottom.
  The gradual movement of the activators makes the FIBC assume a "V" shape, to eliminate the deadlock points.
For more information, see Technical Catalogue - Maintenance KSC.

- Cutting device
  It is used for cutting FIBCs without valves which cannot be recycled after emptying.
- Hose connector kit available in black or white food- grade rubber.
- Round or square flange for hopper.
- Raised feet for lifting the entire structure.
- Mechanical limit stop for signalling door open status.
- Manual gate valve at outlet.

ZUBEHÖR

- Trichterdichtung aus nahrungsmitteltauglichem Material.

- Pneumatische Austraghilfe
  Materialien, die nur schwach rieselfähig sind und nur schwer aus dem Big-Bag ausgetragen werden können, verlangen den Einsatz pneumatischer Austraghilfen. Diese wirken direkt auf den unteren Teil des Big-Bags und bewegen die gegenüberliegenden Sackkanten auf- und abwärts, damit das im unteren Bereich verdichtete Material abläuft.
  Das ständige Ausfahren der Austraghilfe dient dazu, daß der Big-Bag eine V-förmige Gestalt annimmt, wodurch Toträume beseitigt werden.
Weitere Informationen siehe Technischer Katalog - Einbau und Wartungsanleitung KSC.

- Schneidevorrichtung
  Hat die Funktion, Einwegsäcke ohne Ventil aufzuschneiden.
- Montagesatz für flexible Verbindung, erhältlich in schwarzem oder weißem, nahrungsmittelechtem Kautschuk.
- Rund- oder Vierkantflansche für Trichter.
- Füße zum Höherstellen der kompletten Vorrichtung.
- Mechanischer Endschalter für Meldungen Klappe offen.
- Handschieber am Auslauf.

ACCESSOIRES

- Joint trémie en matière indiquée pour le secteur alimentaire

- Activateurs pneumatiques.
  Les matières peu fluides ne sortent pas facilement des sacs. Il est donc nécessaire d'appliquer des activateurs pneumatiques. Ils agissent directement sur le fond des «big bag» en déterminant un rehaussement ou un abaissement des angles opposés de manière à stimuler la sortie du produit compacte sur le fond.
  Le mouvement progressif des activateurs fait prendre une forme en «V» au big bag de manière à éliminer les points morts.
Pour plus d'informations voir Catolgue Techinique - Utilisation et Entertien KSC.

- Système de coupe.
  Sa fonction est de couper les gros sacs sans valve, qui ne sont pas récupérés après vidange.
- Kit de liaison flexible disponible en caoutchouc noir ou blanc pour secteur alimentaire.
- Brides rondes ou carrées pour la trémie.
- Pieds de rehausse pour le soulèvement de toute la structure.
-- Fin de course mécanique pour signaler l'ouverture du portillon.
- Vanne manuelle de décharge-ment.

ACCESSORI

- Guarnizione tramoggia in materiale idoneo al settore alimentare

- Attivatori pneumatici.
  I materiali poco scorrevoli non escono facilmente dai big bag pertanto si rende necessario applicare degli attivatori pneumatici. Questi agiscono direttamente sul fondo dei big bag determinando un innalzamento e un abbassamento degli spigoli opposti in modo da stimolare la fuoriuscita del materiale compattato sul fondo.
  La progressiva escursione degli attivatori fa si che il big bag assume la forma a "V" in modo da eliminare i punti morti.
Per ulteriori informazioni consultare il relativo Catalogo Tecnico - Uso e Manutenzione KSC.

- Sistema di taglio.
  Ha la funzione di tagliare BIG BAG senza valvola, monouso.
- Kit collegamento flessibile disponibile in gomma nera o bianca per settore alimentare.
- Flange tonde o quadre per tramoggia.
- Piedi di rialzo per il sollevamento di tutta la struttura.
- Fine corsa meccanico per segnalazioni apertura portello.
- Serranda manuale allo scarico.

The Manufacturer provides a 12-month warranty on their products. This period starts from the date of the consignment note.
The warranty is not applicable for breakage and/or defects caused by incorrect installation or use, or incorrect maintenance, or modifications not authorized by the Manufacturer.
The warranty does not extend to parts that wear out following normal use and electrical components.
To be more precise, the warrantee lapses if the FIBC:
- has been tampered with or modified,
- has not been used correctly,
- has been used without respecting the limits indicated in this manual and/or has been subjected to excessive mecha nical stress,
- has not been subjected to the necessary maintenance or these operations have been carried out partly and/or incorrectly,
- has been damaged due to carelessness during transport, installation and use,
- has been fitted with spare parts that are not original.

On receiving the product, the user must check these for defects deriving from transport and/or incomplete supply.
Defects, damage or incom pleteness of the supply must be immediately communicated to the Manufacturer in writing and countersigned by the haulage transporter.

Der Hersteller gewährt auf ihre Erzeugnisse eine Garantie von 12 Monaten. Die Garantiezeit beginnt mit dem Datum des Lieferscheins.
Die Garantie ist nicht anwendbar, wenn es sich um Schäden und/ oder Defekte handelt, die auf falschem Einbau oder Gebrauch, nicht korrekter Wartung oder Änderungen beruhen, die ohne die Genehmigung des Her-stellers ausgeführt wurden.
Die Garantie deckt keine Teile ab, die infolge des normalen Gebrauchs verschleißen, und auch keine elektrischen Teile.
Vielmehr erlischt die Garantie in jenen Fällen, in denen die Big-Bag-Entleerstation:
- manipuliert oder geändert wurde,
- nicht korrekt verwendet wurde,
- nicht unter der Beachtung der in diesem Handbuch genannten Grenzwerte benutzt wurde und/ oder zu starken mechanischen Belastungen ausgesetzt wurde,
- bei Transport, Installation und Gebrauch Schäden wegen Fahrlässigkeit erlitten hat,
- mit Ersatzteilen bestückt wurde, die keine Originalteile sind.

Beim Empfang der Ware hat der Empfänger sicherzustellen, dass die Ware keine durch den Transport verursachten Schäden oder Defekte aufweist, und/oder dass der Lieferumfang vollstän-dig ist.
Etwaige Defekte, Schäden oder Fehlmengen sind mittels schriftlicher und vom Frachtführer gegengezeichneter Mitteilung sofort dem Hersteller zu melden.

Le constructeur reconnaît une période de 12 mois de garantie sur les produits de sa fabrication. La période prend effet à compter de la date indiquée sur le bon de livraison.
La garantie ne s'applique pas à la suite de ruptures et/ou de défauts provoqués par un montage et une utilisation impropre, des entretiens qui ne sont réalisés correctement ou des modifications apportées sans autorisation du constru cteur.
La garantie s'étend aux pièces qui s'usent à la suite d'une utilisation normale et aux parties électriques.
Plus précisément, la garantie est sans effet dans les cas où le vide BIG-BAG :
- a été manipulé ou modifié,
- a été utilisé de manière incor recte,
- a été utilisé sans respecter les limites indiquées dans la présen te notice et/ou qu'il a été soumis à des contraintes mécaniques excessives
- il n'a pas été soumis aux entretiens nécessaires ou que ces opérations ont été effectuées partiellement, de manière incom plète ou incorrecte
- a subit des dommages par négligence pendant le transport, la mise en place et l'utilisation,
- a été réparé avec des pièces qui ne sont pas d'origine.

Dès réception de la marchan dise, le destinataire doit vérifier que celle-ci n'a pas de défauts ou subit de dégâts dus au tran sport et que la fourniture n'est pas incomplète.
Tout défaut, dommage ou four niture incomplète doit immédia tement être signalée au constru cteur par communication écrite et contresignée par le tran sporteur.

Il costruttore riconosce un periodo di 12 mesi di garanzia sui prodotti di propria costruzione. Il periodo decorre dalla data della bolla di consegna.
La garanzia non è applicabile a seguito di rotture e/o difetti causati da errata installazione o utilizzo, oppure da manutenzioni non corrette o modifiche apportate senza autorizzazione del costruttore.
La garanzia non si estende alle parti che si logorano in seguito al normale uso e alle parti elettriche.
A miglior precisazione la garanzia decade nei casi in cui lo svuota BIG-BAG:
- sia stato manomesso o modificato,
- sia stato utilizzato non correttamente,
- sia stato utilizzato non rispettando i limiti indicati nel presente manuale e/o sia stato sottoposto ad eccessive sollecitazioni meccaniche,
- non sia stato sottoposto alle necessarie manutenzioni o queste siano state eseguite solo in parte e/o non correttamente,
- abbia subito danni per incuria durante il trasporto, l'installazione e l'utilizzo,
- siano state inserite parti di ricambio non originali.

Al ricevimento del prodotto, il destinatario deve verificare che lo stesso non presenti difetti o danni derivanti dal trasporto e/o incompletezza della fornitura.
Eventuali difetti, danni o incompletezza vanno immediatamente segnalati al costruttore mediante comunicazione scritta e controfirmata dal vettore.

CHECKING BEFORE SHIPMENT

The machine has been subjected to operating tests at our factory in order to guarantee correct installation. The special checks carried out by the manufacturer are as follows:

- Checking the power voltage of the electric motor vibrator, which must correspond to the value specified at the time of purchase.;
- Checking the serial number;
- Checking to ensure that all rating plates are present;
- Checking to ensure that all bolts and screws are locked properly;
- Checking the dimensions;
- Checking painting;
- Check correct working of the pneumatic actuators without load for about 15 minutes;
- Checking packaging.

KONTROLLEN VON DEM VERSAND

Die Maschine ist im Herstellerwerk einer gründlichen Funktionsprobe unterzogen worden, damit die korrekte Inbetriebnahme garantiert werden kann. Insbesondere wurden die folgenden Kontrollen ausgeführt:

- Kontrolle der Betriebsspannung des elektrischen Unwuchtmotors, die den Werten entsprechen muss, die bei der Bestellung angegeben wurden.
- Kontrolle der Serien-Nummer.
- Kontrolle auf das Vorhandensein aller Schilder.
- Kontrolle aller Schrauben auf festen Sitz.
- Größenkontrolle.
- Lackkontrolle.
- Kontrolle der pneumatischen Austraghilfen im leeren Zustand auf korrekte Funktion auf die Dauer von circa 15 Minuten
- Kontrolle der Verpackung.

CONTROLES AVANT L'EXPEDITION

La machine a subi dans nos établissement un essai de réception réel de fonctionnement, pour garantir une mise en service correcte. Les contrôles effectués par le constructeur sont notamment les suivants:

- Contrôle de la tension de fonctionnement du motovibrateur électrique, qui doit correspondre à la valeur demandée au moment de la commande;
- Contrôle du numéro de matricule;
- Contrôle de la présence de toutes les plaques;
- Contrôle du serrage de toute la visserie;
- Contrôle dimensionnel;
- Contrôle de la peinture;
- Contrôle du fonctionnement correct des actionneurs pneumatiques à vide pendant environ 15 minutes;
- Contrôle de l'emballage.

CONTROLLI PRIMA DELLA SPEDIZIONE

La macchina ha subito, presso i nostri stabilimenti, un reale collaudo funzionale, così da garantire la corretta messa in esercizio. In particolare i controlli compiuti dal costruttore sono i seguenti:

- Controllo della tensione di funzionamento del motovibratore elettrico, che deve corrispondere al valore richiesto al momento dell' acquisto;
- Controllo del numero di matricola;
- Controllo presenza di tutte le targhette;
- Controllo serraggio di tutta la viteria;
- Controllo dimensionale;
- Controllo verniciatura;
- Controllo corretto funzionamento degli attivatori pneumatici a vuoto per 15 minuti circa;
- Controllo imballaggio.

TRANSPORT

When the filter is delivered, make sure that the type and quantity of the materials consigned comply with the information on the order confirmation. Immediately inform the haulage contractor in writing if damage is discovered, using the relative space on the consignment form.
The driver is obliged to accept the complaint and to issue you with a copy. If the filter has been supplied carriage forward, either sent your complaint to us or straight to the haulage contractor. Damages will only be reimbursed if you have notified the matter on receipt of the goods.
Avoid any kind of damage due to the unloading and handling operations; so lift loose parts, if any of the FIBC using the eyebolts provided. DO NOT PUSH OR PULL the components! Always bear in mind you are dealing with mechanical equipment which must be treated with care.

TRANSPORT

Bei Erhalt der Ware sicherstellen, ob Typ und Menge mit den Daten auf der Bestellung übereinstimmen.
Etwaige Transportschäden sind sofort auf dem Schriftwege zu melden, und zwar durch Eintragen auf dem Lieferschein.
Der Fahrer ist verpflichtet, diese Reklamation anzunehmen und Ihnen eine Kopie davon auszuhändigen. Wenn die Lieferung frei Haus erfolgt, senden Sie Ihre Reklamation an uns, andernfalls direkt an den Frachtführer. Die Entschädigung erfolgt nur, wenn der Schaden gleich bei Empfang der Ware gemeldet wird.
Beim Abladen und beim Handling jede Art der Beschädigung vermei-den. Zum Anheben der eventuell zerlegten Teile der Big-Bag-Ent-leerstation die vorhandenen Kran-ösen verwenden. Komponenten weder SCHIEBEN NOCH SCHLEI-FEN! Immer berücksichtigen, dass es sich um mechanische Elemente handelt, die mit Vorsicht zu behandeln sind.

TRANSPORT

Au moment où vous recevez la machine, vérifiez si la typologie et la quantité correspondent bien aux données qui se trouvent sur la confirmation de la commande.
Si vous constatez des dommages, vous devez immédiatement le déclarer en l'écrivant dans l'emplacement réservé à cet effet sur la lettre de voiture.
Le chauffeur est obligé d'accepter votre réclamation et de vous en laisser une copie. Si la fourniture a été livrée franco destination, envoyez-nous votre réclamation, sinon envoyez-la directement au transporteur.
Vous ne pourrez être remboursé des dommages et intérêts que si vous avez déclaré le dommage au moment où vous avez reçu la machine. Evitez tout type de dégât pendant le déchargement et les déplacements ; pour cela soulever les pièces éventuellement séparées du vide BIG-BAG en utilisant les crochets prévus à cet effet. VOUS NE DEVEZ NI PAS POUSSER, NI TRAINER les composants ! Rappelez-vous qu'il s'agit de matériel mécanique qui doit être déplacé avec le plus grand soin.

TRASPORTO

Al ricevimento della merce controllare se la tipologia e la quantità corrispondono con i dati della conferma d'ordine. Eventuali danni devono essere fatti presenti immediatamente per iscritto nell'apposito spazio della lettera di vettura.
L'autista è obbligato ad accettare un tale reclamo e lasciarne una copia a Voi. Se la fornitura è franco destino, inviate il vs. reclamo e noi, altrimenti direttamente allo spedizioniere. Il risarcimento avviene soltanto se avete fatto presente il danno all'atto del ricevimento.
Evitate ogni tipo di danneggiamento durante lo scarico e le movimentazioni; a tale scopo sollevare eventuali pezzi sfusi dello svuota BIG-BAG impiegando i golfari previsti. NON SPINGERE NÈ TRASCINARE i componenti! Tenete conto che si tratta di materiale meccanico che deve essere movimentato con cura.

MACHINE STORAGE OVER EXTENDED PERIODS

Avoid a humid or salty environ-ment. If this is not possible protect the filter using insulating foil.
Prior to installation of the filter, check to ensure that all the electrical and pneumatic components are intact.
To store the machine correctly for a period of inactivity, clean all the parts thoroughly and grease the elastic parts. Store the equipment on a wooden platform, in a place that is protected from inclement weather conditions.

LANGFRISTIGE EINLAGERUNG DER MASCHINE

Eine feuchte und salzige Umge-bung sollte vermieden werden. Ist dies nicht möglich, das Gerät durch wärmedämmende Folie schützen.
Vor dem Einbau des Geräts prüfen, ob die elektrischen und pneumatischen Komponenten intakt sind.
Eine korrekt Einlagerung der Maschine bei längerem Nichtgebrauch erfordert eine grundliche Reinigung aller Teile und das Einfetten der elastischen Komponenten; die Ausrüstung auf Holzbalken legen und witterungsgeschützt aufbewahren.

EMMAGASINAGE DE LA MACHINE POUR UNE LONGUE PÉRIODE.

Eviter possiblement des am-biants humides et salmâtres. Si cela n'est pas possible, protéger le produit avec des pellicules protectives thermoisolantes. Avant d'installer la machine contrôler l'intégrité de l'instal-lation électrique et pneumatique.
Pour stocker correctement la machine pour une longue période d'inactivité, il est conseillé de nettoyer parfaitement toutes les pièces et de graisser les parties élastiques. Stocker sur une palette en bois à l'abri des intempéries.

IMMAGAZZINAGGIO DELLA MACCHINA PER PERIODO PROLUNGATO.

Evitare possibilmente ambienti umidi e salmastri.
Qualora ciò non sia possibile, proteggere il prodotto con pellicole protettive termoisolanti.
Prima di installare la macchina controllare l'integrità dell'impianto elettrico e pneumatico.
Per immagazzinare correttamente la macchina per un periodo di inattività, bisogna pulire accuratamente tutte le parti e ingrassare le parti metalliche.
Sistemare l'attrezzatura su pedane in legno e locarla al riparo dalle intemperie.

The FIBC is basically supplied on a pallet of suitable dimensions, protected with a heat-shrink polythene cover.

In ihrer Standardversion wird die Big-Bag-Entleerstation auf einer Palette entsprechender Größe stehend ausgeliefert und ist durch eine Schrumpffolie aus Poly-äthylen geschützt.

Le vide BIG-BAG est livré en standard sur une palette de dimensions appropriées et enveloppée dans un film en polyéthylène thermo-rétractable.

Di base lo svuota BIG-BAG viene fornito su un pallet di dimensioni opportune e protetto da un involucro di polietilene termoretraibile. A richiesta può essere fornito all'interno di gabbia di protezione in legno.

1 - STORAGE PRIOR TO INSTALLATION

- Avoid damp, salty environments, if possible.
- Place the equipment on wooden platforms and store them protected from unfavourable weather conditions.

2 - PROLONGED MACHINE SHUTDOWNS AFTER ASSEMBLY

- Before starting up the machine, set it in safety status.
- Prior to commissioning the machine check the vibrator motor and all other machine components are intact and functioning.
- Allow the pneumatic actuators to run load-free for **at least 10 minutes** without any material inside to ensure that all components work correctly.
- Check to ensure correct working of the electric vibrator, running it **only for a few seconds** with the hopper empty.

N.B.: prolonged use of the vibrator with the machine devoid of product can damage the machine.

3 - POSSIBLE REUSE AFTER PERIODS OF INACTIVITY

- During machine halts, avoid damp, salty environments
- Place the equipment on wooden platforms and store them protected from unfavourable weather conditions.
- Set the machine in safety status before starting it up.
- Before starting up the machine, check the condition of the electric vibrator and all parts for which long shutdowns may affect working.
- Clean the machine thoroughly before starting it.

1) EINLAGERUNG VOR DEM EINBAU

- Feuchte und salzhaltige Luft für die Einlagerung vermeiden.
- Die Einrichtung auf Holzpaletten setzen und vor Witterung schützen.

2) LÄNGERE BETRIEBSUNTERBRECHUNGEN NACH DEM EINBAU

- Vor der Inbetriebnahme ist das Gerät in einen sicheren Zustand zu versetzen.
- Vor der Inbetriebnahme des Gerätes den elektrischen Unwuchtmotor und alle anderen Geräteteile auf Unversehrtheit prüfen sowie auf deren Funktionstüchtigkeit die nach einem längeren Geräte-stillstand in Frage gestellt sein könnte.
- Vor dem Einschalten des Gerätes eine Reinigung durchführen.
- Die pneumatischen Austraghilfen wenigstens **10 Minuten** lang ohne Materialfüllung bei leerem Gerät laufen lassen, um den korrekten Betrieb aller Komponenten zu sicherzustellen.
- Den Unwuchtmotor auf korrekten Betrieb prüfen, indem man ihn **nur ein paar Sekunden** bei leerem Trichter laufen lässt.

N.B.: Eine längerer Betrieb des Unwuchtmotors bei leerem Gerät könnte dieses beschä-digen.

3) MÖGLICHE WIEDERVERWENDUNG NACH EINEM LÄNGEREN STILLSTAND

- Während des Stillstands des Gerätes Räume mit feuchter und salzhaltiger Luft vermeiden.
- Das Gerät auf Holzpaletten setzen und vor Witterung schützen.
- Vor der Inbetriebnahme ist das Gerät in einen sicheren Zustand zu versetzen.
- Vor der Inbetriebnahme des Gerätes den elektrischen Unwuchtmotor und alle Teile auf Unversehrtheit prüfen, deren Funktionstüchtigkeit durch die längere Betriebs-unterbrechung in Frage gestellt sein könnte.
- Vor dem Einschalten des Gerätes eine Reinigung durchführen.

1-EMMAGASINAGE AVANT LA MISE EN PLACE

- Si possible éviter les locaux humides et les saumâtres
- Placer l'équipement sur des palettes en bois et les ranger à l'abri des intempéries.

2-ARRÊT MACHINE PROLONGÉ APRÈS LE MONTAGE

- Avant la mise en service, mettre la machine en sécurité.
- Avant la mise en service de la machine, contrôler l'intégrité du motovibrateur électrique et de toutes les parties pour lesquelles un arrêt prolongé pourrait compromettre le fonctionnement.
- Effectuer un cycle complet de nettoyage avant de mettre la machine en marche.
- Laisser fonctionner à vide les actionneurs pneumatiques pendant **10 minutes** sans matière à l'intérieur pour vérifier le fonctionnement correct de chaque composant.
- Vérifier le bon fonctionnement du moto-vibrateur en le faisant fonctionner **seulement quelques secondes** avec la trémie vide.

N.B.: l'utilisation prolongée du vibrateur avec la machine sans produit pourrait provoquer des dommages à la machine.

3-RÉ-UTILISATION APRES UNE PÉRIODE D'INACTIVITÉ

- Pendant la période d'inactivté de la machine éviter les locaux humides et saumâtres
- Placer l'équipement sur des palettes en bois et les ranger à l'abri des intempéries.
- Prima della messa in servizio
- Avant la mise en service, mettre la machine en sécurité.
- Avant la mise en service de la machine, contrôler l'intégrité du motovibrateur électrique et de toutes les parties pour lesquelles un arrêt prolongé pourrait compromettre le fonctionnement.
- Effectuer un cycle complet de nettoyage avant de mettre la machine en marche.

1-IMMAGAZZINAGGIO PRIMA DELL'INSTALLAZIONE

- Evitare possibilmente ambienti umidi e salmastri
- Sistemare l'attrezzatura su pedane di legno e locarle al riparo dalle intemperie.

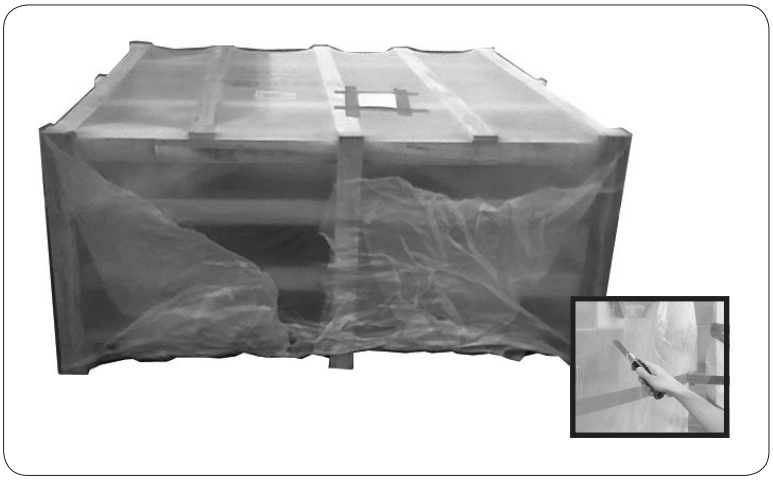
2-FERMO MACCHINA PROLUNGATO DOPO IL MONTAGGIO

- Prima della messa in servizio mettere in sicurezza la macchina.
- Prima della messa in servizio della macchina controllare l'integrità del motovibratore elettrico e di tutte le parti per le quali un prolungato arresto potrebbe compromettere la funzionalità.
- Eseguire un ciclo di pulizia completa prima di attivare la macchina.
- Lasciare funzionare a vuoto gli attuatori pneumatici per **almeno 10 minuti** senza materiale all'interno per verificare il corretto funzionamento di ogni componente.
- Verificare il corretto funzionamento del motovibratore facendolo funzionare **solo per pochi secondi** con tramoggia vuota.

N.B.: un utilizzo prolungato del vibratore con macchina scarica di prodotto potrebbe arrecare danni alla macchina.

3-POSSIBILE REIMPIEGO DOPO PERIODO DI INATTIVITÀ

- Durante il fermo macchina evitare ambienti umidi e salmastri
- Sistemare l'attrezzatura su pedane di legno e locarle al riparo dalle intemperie.
- Prima della messa in servizio mettere in sicurezza la macchina.
- Prima della messa in servizio della macchina controllare l'integrità del motovibratore elettrico e di tutte le parti per le quali un prolungato arresto potrebbe compromettere la funzionalità.
- Eseguire un ciclo di pulizia completa prima di attivare la macchina.



To remove the packing, use a cutter or a pair of scissors to cut the heat-shrink nylon covering.
Take special care to avoid damaging parts of the machine and/or scratch the paint with the blade.
Si consiglia di utilizzare un martello per smontare l'imballo a gabbia a protezione della macchina.
The FIBCs require certain operations for completing assembly before starting operation, in particular:

- **MODEL T** must be fixed to a solid structure (constructed by the plant designer).

- MODELLI C, S, M
Le macchine sono già parzialmente assemblate; dovrà essere assemblato il telaio ed installata la tramoggia. (vedi oltre)

- All the machines must be fixed to the ground or to a solid structure before use.
- Make the electrical connections of the electric vibrator to all the machines.
- For all the assembly operations listed above, proceed as described below.

NOTE:
It is the installer's responsibility to dispose off the packaging in a suitable manner, in compliance with existing legislation.

Zum Entfernen der Verpackung reicht es aus, einen Cutter oder eine Schere zu benutzen, mit der man die Nylon-Schrumpffolie aufschneidet.
Besonders darauf achten, dass das Messer keine Teile der Maschine beschädigt und/oder den Lack aufkratzt.
Si consiglia di utilizzare un martello per smontare l'imballo a gabbia a protezione della macchina.
Die BIG-BAG Entleerstationen verlangen noch, dass der Zusammenbau beendet wird, bevor man sie in Betrieb nehmen kann, insbesondere:

- **MODELL T**: Dieses muss an einer festen Struktur befestigt werden (Anfertigung durch den Anlagenbauer).

- MODELLI C, S, M
Le macchine sono già parzialmente assemblate; dovrà essere assemblato il telaio ed installata la tramoggia. (vedi oltre)

- Alle Maschinen müssen vor dem Gebrauch am Boden oder einer soliden Struktur verankert werden.
- Auf allen Maschinen ist der elektrische Anschluss des Unwuchtmotors vorzunehmen.
- Für die oben genannten Montagevorgänge ist so vorzuge

N.B.:
Der Anlagenaufsteller ist dafür verantwortlich, das Verpackungsmaterial auf angemessene Art und in Übereinstimmung mit den einschlägigen, geltenden Gesetzen zu entsorgen.

Pour le déballage il suffit d'utiliser un cutter ou des ciseaux et de couper le film en nylon thermorétractable.
Prêter une attention particulière à ne pas endommager des parties de la machine et/ou rayer le vernis avec la lame.
Si consiglia di utilizzare un martello per smontare l'imballo a gabbia a protezione della macchina.
Les vide BIG-BAG nécessitent quelques opérations pour terminer l'assemblage avant la mise en marche, à savoir:

- le **MODELE T** devra être fixé à une structure solide (réalisée par l'installateur).

- MODELLI C, S, M
Le macchine sono già parzialmente assemblate; dovrà essere assemblato il telaio ed installata la tramoggia. (vedi oltre)

- Toutes les machines seront ancrées par terre ou fixées à une structure solide avant l'utilisation.
- Sur toutes les machines il faudra réaliser le raccordement électrique du motovibrateur.
- Pour toutes les opérations de montage décrites ci-dessus, suivre les instructions des pages suivantes.

N.B.:
L'installateur doit, à ses frais, éliminer les emballages de manière adéquate et conformément aux lois en vigueur en la matière.

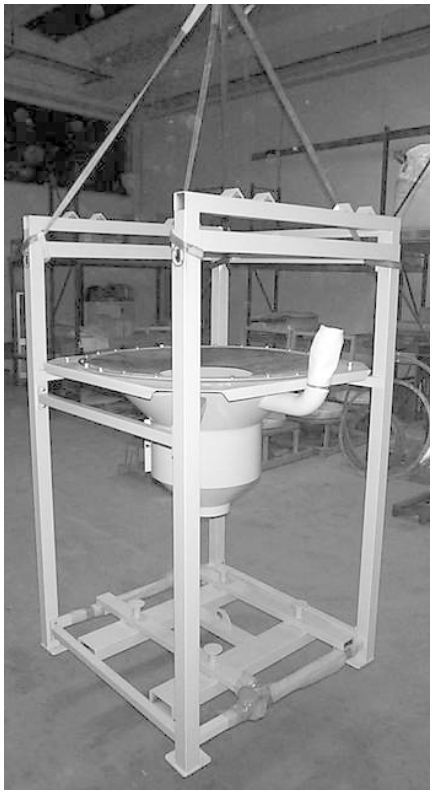
Per la rimozione dell'imballo è sufficiente utilizzare un cutter o un paio di forbici per tagliare l'involucro in naylon termoretraibile.
Prestare particolare attenzione a non danneggiare con la lama parti della macchina e/o scalfire la vernice.
Si consiglia di utilizzare un martello per smontare l'imballo a gabbia a protezione della macchina.
Gli svuota BIG-BAG necessitano di alcune operazioni per concluderne l'assemblaggio prima della messa in funzione, in particolare:

- MODELLO T dovrà essere fissato ad una struttura solida (fabbricazione a cura dell'impiantista).

- MODELLI C, S, M
Le macchine sono già parzialmente assemblate; dovrà essere assemblato il telaio ed installata la tramoggia. (vedi oltre)

- Tutte le macchine dovranno essere ancorate a terra o ad una struttura solida prima dell'utilizzo.
- Su tutte le macchine andrà effettuato il collegamento elettrico del motovibratore.
- Per tutte le operazioni di montaggio sopraelencate, procedere come descritto in seguito.

N.B.:
è a cura dell'installatore smaltire gli imballi in modo adeguato e secondo le leggi vigenti in materia.



Use lifting equipment that is suitable for the weight, dimensions and movements required.

Zum Heben Vorrichtungen verwenden, die dem Gewicht der zu hebenden Last, deren Abmessungen und dem Transport entsprechen.

Utiliser des systèmes de levage appropriés aux poids, dimensions et déplacements prévus.

Utilizzare sistemi di sollevamento idonei alle masse, alle dimensioni e agli spostamenti previsti.

Hook the equipment to the lifting device by means of flexible straps and use hooks with safety fasteners.

Die Befestigung an den Lastaufnahmestellen mittels elastischer Gurte vornehmen und Haken mit Sicherheitsverschluß verwenden.

Effectuer l'accrochage aux prises de levage à l'aide de sangles élastiques et utiliser des crochets avec fermeture de sécurité.

Eseguire l' aggancio alle prese di sollevamento mediante fasce elastiche e utilizzare ganci con chiusure di sicurezza.

Do not use clamps, rings, open hooks or other systems which do not guarantee the same safety as shackles or hooks with safety fasteners.

Es ist verboten, Klammern, Ringe, offene Haken oder andere Systeme zu verwenden, die nicht den Sicher-heitsnormen entsprechen.

L'utilisation de mors, anneaux, crochets ouverts ou tout système ne garantissant pas la même sécurité que les manilles ou les crochets à fermeture de sécurité est interdite.

E' vietato l' utilizzo di morsetti, anelli, ganci aperti o qualsiasi sistema che non garantisca la stessa sicurezza dei grilli o dei ganci con chiusura di sicurezza.

If the straps are in close contact with the equipment it is advisable to place protective elements between the two to avoid damage.

Sollten die Anschlaggurte die Maschine berühren, Schutzelemente dazwischen schieben, um die Ausrüstung nicht zu beschädigen.

En cas de contact entre les sangles et les pièces de l'équipement, il est conseillé d'intercaler des protections pour ne pas endommager ce dernier.

Nel caso si verificassero contatti tra le fasce e parti della macchina, è consigliabile frapporre degli elementi di protezione per evitare danni a quest' ultima.

CAUTION !
1- **Use lifting equipment which acts from above.**
2- **Keep the equipment at a minimum distance above the ground.**
3- **Do not stand near or walk under suspended loads.**

ACHTUNG !
1- **Nur Hebezeug verwenden, das von oben her angreift.**
2- **Die Ausrüstung nur so wenig wie gerade erforderlich heben.**
3- **Nicht unter der hängenden Last gehen oder stehen.**

ATTENTION !
1- **Utiliser des appareils de levage agissant par le haut.**
2- **Tenir la machine à une distance minimum du sol.**
3- **Ne pas stationner sous les charges suspendues.**

ATTENZIONE !
1- **Utilizzare apparecchi di sollevamento che agiscono dall' alto.**
2- **Tenere la macchina alla minima distanza da terra.**
3- **Non sostare o passare sotto i carichi sospesi.**

While defining the installation of the equipment, take into account the space required for maintenance and access, for loading the FIBCs, especially as regards height, as it is variable.
This space depends on the lifting and handling equipment available at the work site.
The place in which the equipment is located must have the necessary connections (electricity, air, etc.) for operating the equipment.
It is the Customer's responsibility to equip the assembly area in accordance with the existing regulations and safety requirements: aeration, earthing, etc.

Bei der Festlegung des Standortes der Ausrüstung auch den für die Wartung und den Zugriff erforderlichen Platz berücksichtigen, der für die Aufgabe des Big-Bags dient, vor allem deshalb, weil die Höhe variabel ist.
Dieser Platz hängt vom Förder- und Hebezeug ab, das auf der Baustelle vorhanden ist.
Der Standort muß mit den erforderlichen Anschlüssen (Strom, Luft etc.) versehen sein, damit die Ausrüstung in Betrieb genommen werden kann.
Für die Einrichtung des Montageraums und die Beachtung der geltenden Normen und die Sicherheitserfordernisse (Belüftung, Erdung etc. ist der Anwender verantwortlich.

Lors de la détermination de l'emplacement de l'équipe-ment tenir compte des espaces d'entretien et d'accès, pour le chargement du sac, surtout en hauteur car celle-ci est variable.
Cet espace dépend des moyens de levage et de manutention disponibles au chantier.
Le local devra être doté des raccordements nécessaires (énergie électrique, air, etc.) pour le fonctionnement de l'équipement.
Le client a la responsabilité d'équiper le lieu de montage dans le respect des normes en vigueur sur la sécurité: aération, mise à la terre, etc.

Nel definire la dislocazione della macchina tenere conto degli spazi di manutenzione e di accesso, per il carico del saccone, soprattutto in altezza in quanto questa è variabile.
Suddetto spazio dipende dai mezzi di sollevamento e movimentazione disponibili in cantiere.
Il locale dovrà essere dotato degli allacciamenti necessari (energia elettrica, aria, ecc...) per il funzionamento della macchina.
E' responsabilità del cliente attrezzare il luogo di montaggio rispettando le normative vigenti e i requisiti di sicurezza: aereazione, messa a terra, ecc...

Assembly instructions:
- Lift and position the equipment (according to the procedure indicated on the previous page) near the supply lines.
- Countermark the position of the four anchor holes on the ground corresponding to the frame supporting plate.
- Move the frame, make the bores as shown in the Table and reposition the equipment.
- Check that the equipment is longitudinally and transversely perfectly level.
- Fit the plugs into the bores and tighten them.

Montageanweisungen:
- Das Gerät auf der Höhe der Versorgungsleitung aufstellen (Vorgehensweise siehe vorangegangene Seite).
- Die Befestigungsbohrungen, die sich auf der Platte der Stellfläche des Rahmens befinden, am Boden markieren.
- Das Gestell seitlich ablegen, Bohrungen lt. Tabelle vorsehen und das Gerät wieder aufstellen.
- Sicherstellen, daß das komplette Gerät in der Waage steht, sowohl in der Längs- als auch in der Querrichtung.
- Die Dübel in die Bohrungen einführen und anziehen.

Instructions de montage:
- Soulever et mettre en place (suivant les procédures indiquées dans la page précédente) au niveau de la ligne d'alimentation.
- Faire sur le sol les marques des trous de fixation situés sur les plaques d'ancrage du bâti.
- Déplacer le bâti, exécuter les trous comme indiqué dans le tableau et positionner de nouveau l'équipement.
- Contrôler que l'équipement est parfaitement horizontal dans le sens longitudinal et transversal.
- Insérer les bouchons dans les trous et visser.

Istruzioni per il montaggio:
- Sollevarlo e posizionarlo (secondo le procedure indicate nella pagina precedente) in corrispondenza della linea di alimentazione.
- Contromarcare sul pavimento i fori di fissaggio situati sulle piastre d' appoggio del telaio.
- Spostare il telaio, eseguire i fori come indicato nella tabella e riposizionare la macchina.
- Controllare che la macchina sia perfettamente orizzontale in senso longitudinale e trasversale.
- Inserire i tappi nei fori e avvitare.

1) The MODEL M BIG-BAG unloader is supplied partially dismantled to optimize transport. About two hours are required to complete assembly at the site; after unpacking and placing all the objects on the floor, proceed as follows:

1) Die BIG-BAG Entleerstation MODELL M wird teilweise zerlegt ausgeliefert, um den Transport zu optimieren. Um den Zusammenbau vor Ort zu vervollständigen, sind circa 2 Arbeitsstunden anzuschlagen. Nach dem Erntfernen der Verpackung und dem Anlegen aller Teile am Boden wie folgt vorgehen:

1) Le vide BIG-BAG MODELE M est fourni partiellement démonté pour optimiser le transport. Il faut environ 2 heures de travail pour réaliser l'assemblage sur place; après avoir enlevé le film d'emballage, procéder de la manière suivante :

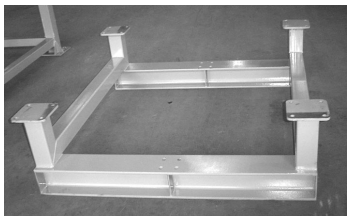
1) Lo svuota BIG-BAG MODELLO M viene fornito parzialmente smontato per ottimizzarne il trasporto. Sono necessarie all'incirca 2 ore di lavoro per ultimarne l'assemblaggio in loco; una volta rimosso l'involucro dell'imballo e depositati tutti gli oggetti a terra, procedere come segue:

2) Slacken the screws connecting the hoist frame 1 to hopper frame 2.

2) Die Schrauben losdrehen, die den Flaschenzugrahmen 1 mit dem Trichtergestell 2 verbinden.

2) Dévisser les vis qui relient le châssis palan 1 et le châssis de la trémie 2.

*2) Svitare le viti che collegano il telaio paranco **1** dal telaio tramoggia **2**.*



3) Using a suitable lifting system, lift the hoist frame and put it aside upside down

3) Das Flaschenzuggestell mit einem geeigneten Gerät heben und separat auf dem Kopf abstellen.

3) Soulever le châssis palan à l'aide d'un système de levage approprié et le mettre de côté, renversé.

3) Sollevare mediante apposito sistema di sollevamento il telaio paranco e deporlo in disparte rovesciato

4) Lift the hopper frame and place it in the final position, fixing the feet to the ground

4) Das Trichtergestell heben und in der endgültigen Position abstellen, um dann die Füße am Boden zu befestigen.

4) Soulever le châssis de la trémie et le mettre dans sa position définitive, en fixant les pieds par terre

4) Sollevare il telaio della tramoggia e disporlo in posizione definitiva fissandone i piedi a terra

5) Place a rear strut 4 on the ground as shown in the Figure and connect a cross beam 5 to it by means of screws, taking care to avoid tightening the screws excessively

5) Einen hinteren Mast 4 auf den Boden legen, wie im Bild zu sehen ist, und eine Querstrebe 5 anschrauben, wobei zu beachten ist, dass die Schrauben nicht zu fest angezogen werden.

5) Placer un pylône 4 arrière par terre, comme montré sur la figure et visser une traverse 5 sans serrer excessivement les vis

*5) Disporre un pilone **4** posteriore al suolo come mostrato in figura e avvitare una traversa **5** avendo cura di non serrare eccessivamente le viti*

6) Place the frame down and connect the second rear strut taking care to orient it as shown in the Figure.

6) Die Struktur hinlegen und den zweiten hinteren Mast befestigen, wobei darauf zu achten ist, dass er wie im Bild gezeigt ausgerichtet wird.

6) Allonger la structure et relier le deuxième pylône arrière en le dirigeant comme indiqué par la figure.

6) Sdraiare la struttura e collegare il secondo pilone posteriore avendo cura di orientarlo come in figura.

7) Connect a second beam 6 as shown in the Figure, taking care to avoid tightening the screws excessively

7) Eine zweite Querstrebe 6 anschließen, wie in der Abbildung zu sehen ist, wobei darauf zu achten ist, dass die Schrauben nicht zu straff angezogen werden.

7) Relier une deuxième traverse 6, comme l'indique la figure, en faisant attention à ne pas trop serrer les vis

*7) Collegare una seconda traversa **6** come mostrato in figura avendo cura di non serrare eccessivamente le viti*

8) Connect the last cross beam as shown in the Figure, taking care to avoid tightening the screws excessively.

8) Die vormontierte Struktur mit einem Kran oder einen ähnlichen System heben und den zweiten hinteren Mast befestigen, wobei darauf zu achten ist, dass die Schrauben nicht zu straff angezogen werden. Nun muss die Struktur ein stabiles Gleichgewicht aufweisen.

8) Relier la dernière traverse comme l'indique la figure, sans serrer excessivement les vis.

8) Collegare l'ultima traversa come mostrato in figura, avendo cura di non serrare eccessivamente le viti.

8) Using a crane or similar system, lift the pre-assembly and fix the third strut taking care to avoid tightening the screws excessively. The structure will now be stable

8) Die vormontierte Struktur mit einem Kran oder einem ähnlichen System heben und den dritten Mast befestigen, wobei ebenfalls zu beachten ist, dass man die Schrauben nicht zu fest anzieht. Nun muss die Struktur ein stabiles Gleichgewicht haben.

8) A l'aide d'une grue ou d'un système similaire soulever la structure pré-assemblée et fixer le troisième pylône sans serrer excessivement les vis. Après quoi la structure sera en équilibre stable

8) Sollevare mediante gru o sistema simile il pre-assemblato e fissare il terzo pilone avendo cura di non serrare eccessivamente le viti. A questo punto la struttura sarà in equilibrio stabile

10)Complete the chassis fixing the last of the struts as shown in the Figure; again take care to avoid tightening the screws excessively

10)Das Gestell fertig montieren, indem man den letzten der Maste befestigt, wie in der Abbildung zu sehen ist. Erneut darauf achten, die Schrauben nicht zu fest anzuziehen.

10)Compléter le châssis en fixant le dernier pylône comme l'indique la figure ; même dans ce cas il ne faut pas trop serrer les vis

10)Completare lo chassis fissando l'ultimo dei piloni come mostrato in figura; ancora una volta non serrare eccessivamente le viti

11) Lift the chassis carefully using a crane or a forklift truck and place it on top of the hoist frame as shown in the Figure

11) Das Gestell sorgfältig mit einem Kran oder Gabelstapler geben und über dem Flaschenzuggestell abstellen, wie im Bild zu sehen ist.

11) A l'aide d'une grue ou d'un chariot élévateur soulever le châssis et l'appuyer sur le châssis pour palan comme le montre la figure.

11) Sollevare con cura mediante una gru o carrello elevatore lo chassis ed appoggiarlo sopra al telaio per paranco come mostrato in figura

12) Fix the hoist frame to the chassis by means of the 16 M16 bolts and tighten these

12) Das Flaschenzuggestell mit 16 Schraubbolzen M16 am Gestell befestigen und diese Schrauben gut anziehen.

12) Fixer le châssis du palan sur le châssis au moyen des 16 boulons M16 en veillant à bien les serrer

12) Fissare il telaio paranco allo chassis mediante i 16 bulloni M16 e serrare bene questi ultimi

13) Fix the beam 3 for the hoist on hoist frame using the 8 M20 bolts and tighten the assembly firmly

13) Den Balken 3 für den Flaschenzug mit den 8 Schraubbolzen M20 am Flaschenzugrahmen befestigen und alles gut anziehen.

13) Fixer la poutre 3 pour le palan sur le châssis du palan au moyen des 8 boulons M20 et bien serrer le tout

*13) Fissare la trave **3** per il paranco sul telaio paranco mediante gli 8 bulloni M20 e serrare bene il tutto*

14) Using a suitable crane or forklift truck lift the entire block A and position it on top of the hopper frame B taking care to align the holes of the connecting flanges

14) Den ganzen Block A mit Kran oder Gabelstapler heben und über dem Trichtergestell B anordnen, wobei darauf zu achten ist, dass die Löcher der Verbindungsflansche übereinander zu liegen kommen.

14) A l'aide d'une grue ou d'un chariot élévateur soulever tout l'ensemble **A** et le poser au-dessus du châssis trémie **B** en veillant à faire coïncider les orifices des brides d'accouplement

*14) Mediante gru o carrello elevatore adeguato sollevare l'intero blocco **A** e posizionarlo sopra il telaio tramoggia **B** avendo cura di far combaciare i fori delle flangie di collegamento*

15) Insert the connecting bolts and tighten them

15) Die Verbindungsschrauben einstecken und gut anziehen.

15) Introduire les boulons d'accouplement et les serrer

15) Inserire i bulloni di collegamento e serrarli bene

16) Now tighten all the bolts of the chassis and carry out a final check on all the bolts to make sure they are tightened perfectly

16) Nun alle Schraubbolzen des Gestells gut anziehen und die anschließende Kontrolle ausführen, um sicherzugehen, dass alle Schraubteile fest angezogen sind.

16) Après quoi bien serrer tous les boulons du châssis et effectuer un contrôle final du serrage correct de tous les boulons

16) Provvedere ora a serrare bene tutti i bulloni dello chassis ed eseguire un controllo finale sul corretto serraggio di tutta la bulloneria

Important: use a torque wrench to ensure the following tightening torques: M16 screws: 225 Nm M18 screws: 439 Nm	**Wichtig:** Einen Drehmomentschlüssel benutzen, um die folgenden Anzugsdrehmomente zu erhalten: Schrauben M16: 225 Nm Schrauben M18: 439 Nm	**Important :** utiliser une clé dynamométrique afin de garantir les couples de serrage suivant : Vis M16 : 225 Nm Vis M18 : 439 Nm	**Importante:** utilizzare una chiave dinanometrica al fine di garantire le seguenti coppie di serraggio: Viti M16: 225 Nm Viti M18: 439 Nm

GENERAL WARNINGS	ALLGEMEINE WARNHINWEISE	CONSIGNES GENERALES	AVVERTENZE GENERALI
1.1 All the connections to the supplies must be carried out according to existing safety regulations.	1.1 Alle Anschlüsse an das Stromnetz müssen gemäß der geltenden Sicherheitsbestimmungen ausgeführt werden.	1.1 Tous les raccordements au secteur électrique doivent être réalisés conformément aux normes de sécurité en vigueur.	1.1 Tutti i collegamenti alla rete di alimentazione devono essere eseguiti secondo le norme di sicurezza vigenti.
1.2 Before start-up, check the efficiency of the earth connection.	1.2 Vor der Inbetriebnahme ist der Erdungsanschluß auf Funktionstüchtigkeit zu prüfen.	1.2 Avant la mise en route vérifier la mise à la terre et son efficacité.	1.2 Prima dell' avviamento assicurarsi del perfetto collegamento a terra verificandone l' efficienza.
1.3 Check the supply voltage and cycles to ensure these correspond with the values on the motor rating plate.	1.3 Sicherstellen, daß Spannung und Frequenz den Werten auf dem Typenschild des Motors entsprechen.	1.3 Contrôler que la tension et la fréquence d'alimentation correspondent aux valeurs de plaque du moteur.	1.3 Controllare che tensione e frequenza di alimentazione siano corrispondenti ai valori di targa del motore.
1.4 Provide protection against overload; ensure the calibrated values of the thermal or magnetothermal current do not exceed those on the rating plate.	1.4 Einen Überlastschutz vorsehen, dabei auch prüfen, ob die Einstellwerte der Thermorelais oder Motorschutzschalter nicht über dem Wert des Typenschilds liegen.	1.4 Prévoir des protections contre les surcharges, en vérifiant que les valeurs du courant de réglage de l'interrupteur ne dépasse pas ceux de plaque.	1.4 Prevedere delle protezioni di sovraccarico, verificando che i valori della corrente di taratura del termico o magnetotermico non superino più del 10% quelli di targa.
1.5 The electrical connection must be carried out according to the following sequence: - disconnect the mains supply. - Pass the power cable through the cable gland into the junction box. - make the connections using the accessories provided. - tighten the cable glands completely. - fit the junction box cover taking care to avoid damaging the seal.	1.5 Der Stromanschluß ist in folgender Reihenfolge vorzunehmen: - Die allgemeine Stromversorgung ausschalten. - Die Speisekabel durch die Kabeldurchführung in das Innere des Anschlußkastens stecken. - Die Anschlüsse mit den vorgesehenen Zubehörteilen vornehmen. - Die Kabeldurchführungen fest anziehen. - Den Kastendeckel montieren und dabei beachten, daß die Dichtung nicht beschädigt wird.	1.5 Le raccordement électrique doit être effectué dans la séquence ci-dessous: - débrancher l'alimentation électrique générale. - Passer les câbles d'alimentation à travers les serre-câbles, à l'intérieur du boîtier de connexion. - Exécuter les raccordements en utilisant les accessoires prévus à cet effet. - Serrer à fond les serre-câbles. - Monter le couvercle du boîtier en faisant attention à ne pas endommager le joint.	1.5 Il collegamento elettrico dovrà essere eseguito in sequenza: - disinserire l' alimentazione elettrica generale. - inserire i cavi di alimentazione attraverso i pressacavi, all' interno della scatola di collegamento. - eseguire i collegamenti utilizzando gli appositi accessori. - serrare a fondo i pressacavi. - montare il coperchio della scatola facendo attenzione a non danneggiare la guarnizione.
CAUTION ! **The cross section of the power cable and safety cable must be defined by the buyer. The user must provide a differential automatic circuit-breaker upline of the main switch.**	**ACHTUNG !** **Für die Stromkabel- und Sicherungskabelquer-schnitte ist der Betreiber verantwortlich. Der Betreiber muß stromauf vom Hauptschalter der Anlage einen Fehlerstrom-Schutzschalter vorsehen.**	**ATTENTION !** **Le dimensionnement des câbles d' alimentation et du câble de protection est sous la responsabilité de l'acheteur. L' utilisateur doit appliquer en amont de l'interrupteur général de l'installation, un interrupteur automatique différentiel.**	**ATTENZIONE !** **Il dimensionamento dei cavi di alimentazione e del cavo di protezione è responsabilità dell' acquirente. L' utilizzatore deve applicare a monte dell' interruttore generale dell' impianto, un interruttore automatico differenziale.**
PRECAUTION **Connecting the machine to the mains supply must be done in accordance with the existing regulations of the country where the machine is being used.**	**VORSICHTMASSNAHME** **Der Anschluß der Ausrüstung an das Netz muß unter Beachtung der Normen ausgeführt werden, die im Land des Anwenders gelten.**	**PRECAUTION** **Le raccordement de la machine au secteur doit être effectué dans le respect de la réglementation en vigueur dans le pays de l'utilisateur.**	**PRECAUZIONE** **Nel collegare la macchina alla rete, rispettare la regolamentazione in vigore nel paese dell' utilizzatore.**

The control board comprises a box with front door on which the controls and operation indicators are fitted.

Description of controls and indicators:
SB/EM = PUSHBUTTONS:
controls with single operating mode
SA = SELECTORS:
double-function switches
QS = SWITCHES:
controls with two possible positions.

Die elektrische Steuerung ist mit einer Tür ausgestattet, auf der sich die Bedienelemente und Kontrollanzeigen befinden.

Beschreibung der Bedienelemente und Kontrollanzeigen:
SB/EM = DRUCKKNÖPFE:
Bedienelemente mit nur einer Betriebsart.
SA = WAHLSCHALTER:
Bedienelemente mit zwei Betriebsarten.
QS = SCHALTER:
Bedienelemente mit zwei möglichen Positionen.

L`armoire électrique de commande est constituée d'un boîtier à porte frontale sur lequel sont montés les commandes et témoins de fonctionnement.

Description commandes et indicateurs:
SB / EM = BOUTONS: commandes avec un seul mode de fonctionnemnt.
SA= SÉLECTEURS: commutateurs à deux fonctions.
QS=INTERRUPTEURS commandes à deux positions possibles.

Il quadro elettrico di comando è costituito da una cassetta con portello frontale sul quale sono montati dei comandi ed indicatori di funzionamento.

Descrizione comandi ed indicatori:
SB / EM =PULSANTI:
sono comandi con un'unica modalità di funzionamento
SA=SELETTORI:
sono commutatori a due funzioni.
QS=INTERRUTTORI:
sono comandi con due posizioni possibili.

PNEUMATIC POWER

The compressed air coupling on the equipment is achieved by means of a hose connector pipe having internal diameter 8x6mm.

COMPRESSED AIR PRESSURE

- Minimum 5 bar
- Maximum 6 bar

It is advisable to connect a manual cut-off device on the air infeed line (ball valve or similar) to facilitate subsequent maintenance operations.

DRUCKLUFTVERSORGUNG

Die Einleitung der Druckluft auf die Vorrichtung erfolgt mit einem Gummistutzen mit Innendurchmesser 8x6 mm.

DRUCK DER DRUCKLUFT

- Minimum 5 bar
- Maximum 6 bar

Auf die Zufuhrleitung der Druckluft sollte ein von Hand zu betätigendes Absperrorgan (Kugelventil oder ähnliches) installiert werden, das die anschließenden Wartungsarbeiten vereinfacht.

ALIMENTATION PNEUMATIQUE

Le branchement de l'air comprimé sur les filtres est réalisé par un tube de diamètre 8x6 mm.

PRESSION AIR COMPRIMÉ

- Minimum 5 bar
- Maximum 6 bar

Il est conseillé d 'insérer sur la circuit d' alimentation de l'air un dispositif de coupure manuelle (robinet à boisseau ou similaire) pour faciliter les opérations d' entretien.

ALIMENTAZIONE PNEUMATICA

L' innesto dell' aria compressa sulla macchina è realizzato da un tubo portagomma di diametro 8x6 mm.

PRESSIONE ARIA COMPRESSA

- Minimo 5 bar
- Massimo 6 bar

É consigliabile inserire sulla linea di alimentazione della aria un organo di intercettazione manuale (valvola a sfera o simile) che faciliterà le successive operazioni di manutenzione.

The compressed air must be:

1- Clean
Free of impurities which may damage the solenoid valve.

Warning: Before connecting the compressed air to the equipment, empty the piping.

2 - Dehumidified
However, it is advisable to use a condensate trap.

3 - Oil-free
The presence of oily substances in the air may cause precocious, irreversible clogging.

Die Druckluft muß sein:

1- Sauber
Sie darf keinen Schmutz enthalten, der das Magnetventil des Filters beschädigen könnte.

Achtung: Vor dem Anschluß der Druckluft an die Vorrichtung die Leitungen entleeren.

2 - Trocken
Es sollte aber besser ein Kondensatabscheider benutzt werden.

3 - Ölfrei
Das Vorhandensein von Ölteilchen in der Druckluft würde unweigerlich zum vorzeitigen Verstopfen führen.

L' air comprimé doit être :

1- Propre
Sans impuretés pouvant endommager l'électrovanne du filtre

Attention: avant de brancher l'air comprimé au filtre vider les tuyauteries

2 - Déshumidifié
Il faut prévoir l'utilisation d'un séparateur d'eau de condensation.

3 - Déshuilé
La présence de substances huileuses dans l'air constitue une cause de colmatage précoce et irréversible.

L' aria compressa deve essere:

1- Pulita
Esente da impurità che potrebbe danneggiare l' elettrovalvola

Attenzione: prima di collegare l' aria compressa alla macchina vuotare le tubazioni

2 - Deumidificata
E' opportuno comunque prevedere l' utilizzo di un separatore di condensa.

3 - Disoleata
La presenza di sostanze oleose nell' aria costituirebbe una causa d' intasamento precoce ed irreversibile.

PRELIMINARY OPERATIONS PRIOR TO START-UP

Before starting up the plant, it is essential to carry out a series of checks to prevent problems or risks.

Ascertain that all the equipment components are positioned and fixed correctly.

Carefully check all the connections, the rubber hoses and fixtures.

If pneumatic activators are provided, special attention must be paid to the compressed air connections.

WARNINGS

1) Si raccomanda di non far funzionare mai il motovibratore a macchina vuota (anche in fase di collaudo) onde evitare il rischio di surriscaldamento dello stesso e conseguente possibile danneggiamento irreversibile dello stesso.
2) Per un corretto funzionamento della macchina si consiglia di far funzionare il motovibratore per intervalli di tempo non superiori a 10-15 secondi ogni minuto onde evitare il compattamento del prodotto nella tramoggia; Si ricorda che le masse impiegano circa 40-45 secondi ad arrestarsi completamente.
3 - For proper functioning of the FIBC unloader, the equipment downline must be capable of removing all the product extracted from the FIBC.
4 - The connection between the outlet spout of the FIBC Unloader and any other equipment positioned downline must be made using a flexible connector to prevent vibrations of the hopper from being transmitted to the equipment.
5 - It is advisable to provide a butterfly valve or slide valve at the hopper outlet in order to prevent outflow of product when the motovibrator stops operating.

VORBEREITUNG DER INBETRIEBNAHME

Vor der Inbetriebnahme des Systems müssen eine Reihe von Kontrollen vorgenommen werden, um etwaige Probleme oder Risiken zu vermeiden.

Sicherstellen, daß alle Bestandteile der Vorrichtung korrekt aufgestellt und befestigt sind.

Alle Anschlüsse, Gummischläuche und entsprechenden Befestigungen sorgfältig prüfen.

Falls pneumatische Aus-traghilfen vorgesehen sind, ist besonders auf die pneumatischen Anschlüsse zu achten.

VORSICHT

1) Si raccomanda di non far funzionare mai il motovibratore a macchina vuota (anche in fase di collaudo) onde evitare il rischio di surriscaldamento dello stesso e conseguente possibile danneggiamento irreversibile dello stesso.
2) Per un corretto funzionamento della macchina si consiglia di far funzionare il motovibratore per intervalli di tempo non superiori a 10-15 secondi ogni minuto onde evitare il compattamento del prodotto nella tramoggia; Si ricorda che le masse impiegano circa 40-45 secondi ad arrestarsi completamente.
3 - Für den korrekten Betrieb der Big-Bag-Entleerstation müssen die Geräte stromab unbedingt in der Lage sein, das aus dem Big-Bag entleerte Produkt aufzunehmen.
4 - Der Anschluß zwischen dem Auslauf der Big-Bag-Entleerungsstation und dem stromab eingebauten Gerät ist mittels einer flexiblen Verbindung vorzunehmen, damit die Vibrationen des Trichters nicht auf das Gerät übertragen werden.
5- Am Trichterauslauf sollte ein Flachschieber oder eine Drehklappe vorgesehen werden, damit kein Produkt mehr ausströmt, wenn der Vibrationsmotor einge-schaltet wird.

OPERATIONS PRELIMINAIRES A LA MISE EN MARCHE

Avant d'effectuer la mise en marche de l'installation il est important de faire une série de contrôles pour prévenir les problèmes et les risques.

S' assurer que tous les composants de l'équipement sont bien positionnés et fixés correctement.

Vérifier soigneusement tous les raccordements, les tubes en caoutchouc et leurs fixations.

Si l'équipement est équipé d'activateurs pneumatiques, faire tout particulièrement attention aux raccordements pneumatiques.

RECOMMANDATIONS

1) Si raccomanda di non far funzionare mai il motovibratore a macchina vuota (anche in fase di collaudo) onde evitare il rischio di surriscaldamento dello stesso e conseguente possibile danneggiamento irreversibile dello stesso.
2) Per un corretto funzionamento della macchina si consiglia di far funzionare il motovibratore per intervalli di tempo non superiori a 10-15 secondi ogni minuto onde evitare il compattamento del prodotto nella tramoggia; Si ricorda che le masse impiegano circa 40-45 secondi ad arrestarsi completamente.
3 - Pour un bon fonctionnement du vide-sac il est indispensable que les machines en aval soient en mesure d'évacuer le produit extrait des sacs.
4 - La liaison à la bouche de sortie du vide-sacs et de toute machine placée en aval doit être réalisée à travers un raccord flexible de manière à éviter que les vibrations de la trémie soient transmises à l'équipement.
5 - Il est conseillé de prévoir en sortie de la trémie une vanne papillon ou une vanne à guillotine pour éviter la sortie de produit lors de l'arrêt du fonctionnement du moto-vibrateur.

OPERAZIONI PRELIMINARI ALL' AVVIAMENTO

Prima di effettuare l' avviamento dell' impianto è importante che vengano eseguiti una serie di controlli al fine di prevenire problemi o rischi.

Accertarsi che tutti i componenti della macchina siano collocati in modo opportuno e correttamente fissati.

Verificare accuratamente tutti gli allacciamenti, i tubi gomma ed i relativi fissaggi.

Nel caso siano previsti gli attivatori pneumatici porre particolare attenzione ai collegamenti pneumatici.

AVVERTENZE

1) Si raccomanda di non far funzionare mai il motovibratore a macchina vuota (anche in fase di collaudo) onde evitare il rischio di surriscaldamento dello stesso e conseguente possibile danneggiamento irreversibile dello stesso.
2) Per un corretto funzionamento della macchina si consiglia di far funzionare il motovibratore per intervalli di tempo non superiori a 10-15 secondi ogni minuto onde evitare il compattamento del prodotto nella tramoggia; Si ricorda che le masse impiegano circa 40-45 secondi ad arrestarsi completamente.
3 - Per un buon funzionamento dello svuota big bag è indispensabile che le macchine a valle siano in grado di evacuare il prodotto estratto dal big bag.
4 - Il collegamento tra la bocca di scarico dello svuota big bag e qualunque macchina posizionata a valle dovrà essere effettuata mediante un raccordo flessibile in modo da evitare che le vibrazioni della tramoggia vengano trasmesse alla macchina stessa.
5 - Si consiglia di prevedere allo scarico della tramoggia una valvola a farfalla o una serranda a ghigliottina in modo da evitare fuoriuscita di prodotto all' arresto del funzionamento del motovibratore.

1) Lift the fixing cross of the FIBC above the FIBC by means of a forklift truck or a hoist, and fix the slings to the hooks as shown in the Figure.

1) Das Kreuzstück zur Befestigung des Big-Bag per Gabelstapler oder Flaschenzug über denselben heben und die Gurte zum Einhaken wie in der Abbildung gezeigt befestigen.

1) Soulever le croisillon de fixation du BIG-BAG au-dessus du BIG-BAG au moyen d'un chariot élévateur ou d'un palan; fixer ensuite les sangles dans les crochets, comme l'indique la figure.

1) Sollevare la apposita crociera di fissaggio del BIG-BAG al di sopra del BIG-BAG stesso mediante carrello elevatore o paranco, e fissare le bretelle agli agganci come mostrato in figura.

2) Lift the cross on which the FIBC is hooked by means of a forklift truck or hoist and insert it in the supporting frame.

2) Mit dem Gabelstapler oder dem Flaschenzug das Kreuzstück heben, in den der Big-Bag eingehängt ist, und ihn in die Tragstruktur einführen.

2) A l'aide d'un chariot élévateur ou d'un palan soulever le croisillon sur lequel est accroché le BIG-BAG et l'introduire dans la structure de soutien.

2) *Sollevare col muletto o paranco la crociera sul quale è agganciato il BIG-BAG e introdurlo nella struttura di sostegno.*

3) While inserting the frame, take care to fit the tailpieces of the cross in the seats provided (MODEL S).

3) Beim Einführen darauf achten, dass sich die Vorsprünge des Kreuzstücks innerhalb der vorgesehenen Winkeleisen befinden (MODELL S).

3) En phase d'introduction, veiller à encastrer les extrémités du croisillon dans leurs sièges (MODELE S).

3) *In fase di introduzione avere cura di incastrare le appendici della crociera nelle apposite sedi (MODELLO S).*

4) In the working position the FIBC must only rest on the seal and not exert its weight on it. If this is not the case, modify the position of the removable frame to obtain proper stretching of the FIBC. In the version with hoist it is sufficient to modify the length of the chain. For other versions, it shall be the responsibility of the plant technician or the user to use structures or forklift trucks of suitable height to ensure this condition.

4) *Es ist wichtig, daß der Big-Bag in der Arbeitsstellung auf der Dichtung nur leicht aufliegt und nicht mit seinem Gewicht auf sie drückt. Andernfalls ist die Einstellung des ausziehbaren Gestells so weit zu verändern bis die richtige Streckung des Big-Bag erreicht ist. In der Version mit Seilwinde muß lediglich die Kettenlänge angepaßt werden. Für die anderen Versionen muss der Anlagenbauer bzw. der Betreiber dafür sorgen, dass Strukturen oder Gabelstapler geeigneter Höhe verwendet werden, die diesen Zustand gewährleisten.*

4) Il est très important que le Big-Bag en position de travail soit seulement appuyé sur le joint et qu'il ne repose pas de tout son poids sur celui-ci. Dans le cas contraire modifier la position du châssis démontable jusqu'à obtenir une juste tension du Big-Bag. Dans la version à palan il suffit de modifier la longueur de la chaîne. Pour les autres versions, l'installateur ou l'utilisateur devront se servir de structures ou de chariots élévateurs d'une hauteur appropriée pour garantir cette condition.

4) *É molto importante che il BIG-BAG, in posizione di lavoro, sia solo appoggiato sulla guarnizione e che non gravi col proprio peso sulla stessa. In caso contrario modificare la posizione del telaio sfilabile fino ad ottenere un giusto tensionamento del Big-Bag. Nella versione con paranco sarà sufficente modificare la lunghezza della catena. Per le altre versioni sarà cura dell'impiantista o dell'utilizzatore provvedere ad utilizzare strutture o carrelli elevatori di altezza adeguata a garantire questa condizione.*

5) Open the hatch.

5) *Inspektionsklappe öffnen.*

5) Ouvrir la trappe en actionnant le crochet prévu à cet effet.

5) *Aprire il portello agendo sull' apposito gancio.*

6) Extract the FIBC outlet spout and untie the cord to allow the product to start flowing out.

6) *Die Auslaßöffnung des Big-Bag herausziehen und die Verschlußleine öffnen, damit das Produkts langsam herausströmen kann.*

6) Extraire la bouche de sortie du Big-Bag et délacer le cordon de fermeture de manière à faire tomber la première partie de produit.

6) *Estrarre la bocca di scarico del Big-Bag e slacciarne il cordone di chiusura in modo da fare defluire lentamente la prima parte di prodotto.*

7) Close the hatch and start up the motovibrator to begin emptying the FIBC.

7) *Die Klappe wieder verschließen und den Vibrationsmotor starten, um mit der eigentlichen Entleerung zu beginnen.*

7) Fermer la trappe en agissant sur le crochet prévu à cet effet et commencer le vidage en mettant en marche le motovibrateur.

7) *Chiudere il portello agendo sull' apposito gancio ed iniziare lo svuotamento avviando il motovibratore.*

Operation of the motovibra-tor will be cyclic or continuous according to the flow required. At the end of the emptying process, it is advisable to continue to operate the motovibrator for another one or two minutes in order to remove any product remaining in the folds of the FIBC. Do not start up the motovibrator without the FIBC or without product.

To unload the FIBC empty the hopper completely, then proceed with the operations indicated in reverse order.

Der Vibrationsmotor arbeitet je nach dem geforderten Durchsatz zyklisch oder im Dauerbetrieb. Am Ende der Entleerphase sollte der Vibrationsmotor noch 1 oder 2 Minuten weiterlaufen, um die Restmenge auszutragen, die in den Sackfalten verblieben ist. Den Vibrationsmotor nicht einschalten, wenn kein Sack oder kein Produkt vorhanden ist.

Zur Entfernung des Big-Bag den Trichter ganz entleeren, um die beschriebenen Vorgänge dann in umgekehrter Reihenfolge vorzunehmen.

Le fonctionnement du moto-vibrateur sera cyclique ou continu suivant le débit requis. Il est conseillé, à la fin du vidage, de faire fonctionner le motovibrateur encore 1 à 2 minutes pour extraire le produit qui est resté dans les plis du sac. Ne pas mettre le moto-vibrateur en marche en l'absence de Big Bags ou sans produit.

Pour décharger le Big-Bag vider complètement la trémie puis procéder dans l'ordre inverse aux opérations indiquées.

Il funzionamento del motovibratore sarà ciclico o in continuo a seconda della portata richiesta. Si consiglia, al termine dello svuotamento, di far funzionare ancora il motovibratore per 1 o 2 minuti al fine di estrarre l' eventuale prodotto rimasto nelle pieghe del big bag. Non avviare il motovibratore in assenza di Big Bag o senza prodotto.

Per scaricare il BIG-BAG svuotare completamente la tramoggia poi procedere in senso contrario alle operazioni indicate.

If, during operation, there is a problem with downflow of the product, the motovibrator can be adjusted, by increasing or decreasing its intensity of vibration.

PROCEDURES FOR ADJUSTING MOTOVIBRATOR

The motovibrator installed is of the variable weights type; it is therefore necessary to change the degree of intensity of vibrations according to the method described in the (enclosed) USE AND MAINTENANCE manual supplied by the Manufacturer.

The value of regulation of the motovibrator fitted on the FIBC, is closely linked to the conditions of use.

The adjustment must be made before start-up.

The parameters to be taken into consideration are:

- Type of product;
- Humidity;
- Temperature;
- FIBC storage time;
- Flow rate;
- FIBC dimensions.

The adjustment defined by the Manufacturer during the acceptance test phase is 70%.

If it is necessary to change this value, it is advisable to proceed gradually.

If the results are not satisfactory, before proceeding with another adjustment, empty the product from the hopper in order to avoid residue from previous tests.

THE OPERATION MUST BE CARRIED OUT EXCLUSIVELY BY QUALIFIED PERSONNEL, WITH THE POWER SUPPLY DISCONNECTED.

- Remove the side covers after unscrewing the screws.
- Slacken the Allen nut (photo 1) and move the mobile mass (photo 2) to the required position, and tighten all the way after fitting the respective washers.
- Retighten the Allen nut all the way (Photo 3).

The weights must be adjusted perfectly equal and in the same direction on both sides.

Maximum intensity is obtained with the adjustable masses perfectly aligned with the fixed masses.

Refit the covers, after replacing the OR sealing ring without damaging it.

For more information, refer to the vibrator motor manual available on the site www.wamgroup.com.

Wenn während des Betriebs der Entleerungsstation feststellt wird, daß das Produkt unregelmäßig ausgetragen wird, kann eine Einstellung des Vibrationsmotors vorgenommen werden, indem man die Stärke der Vibrationen erhöht oder verringert.

VORGEHENSWEISE ZUR EINSTELLUNG DES VIBRATIONSMOTORS

Der eingebaute Vibrationsmotor hat einstellbare Un-wuchtmassen. Man kann daher die Stärke der Vibrationen nach Bedarf einstellen. Dazu die Beschreibungen der BETRIEBS- UND WARTUNGSANLEITUNG (in der Anlage) beachten, die der Hersteller des Motors liefert.

Der Wert, auf den der Vibrationsmotor eingestellt ist, der in der Big-Bag- Entleerungsstation installiert ist, ist abhängig von den Einsatzbe-dingungen.

Die Einstellung ist vor der Inbetriebnahme vorzunehmen.

Die zu berücksichtigenden Parameter sind:

- Produkttyp;
- Feuchtegehalt;
- Temperatur;
- Lagerzeit des BIG-BAG;
- Durchsatzmenge;
- BIG-BAG-Abmessungen.

Vom Hersteller ist der Motor bei der Abnahmeprüfung auf einen Wert von 70% eingestellt.

Falls dieser Wert geändert werden muß, immer stufenweise vorgehen.

Wenn das Resultat nicht zufriedenstellend ausfällt, vor weiteren Einstellungen das Produkt aus dem Trichter entfernen, um bei weiteren Versuchen keine Restmengen zu haben.

DER VORGANG DARF NUR DURCH QUALIFIZIERTES PERSONAL UND BEI AUSGESCHALTETER VERSORGUNG AUSGEFÜHRT WERDEN.

- Die Seitendeckel abnehmen, nachdem man die Schrauben losgedreht hat.
- Die Innensechskantmutter (Bild 1) lockern, das bewegliche Gewicht (Bild 2) in die gewünschte Position bringen und fest anziehen, nachdem man immer die entsprechenden Unterlegscheiben dazwischengelegt hat.
- Die Mutter fest anziehen (Bild 3)

Die Gewichte müssen perfekt gleichmäßig und auf beiden Seiten in der gleichen Richtung eingestellt werden.

Die max. Stärke erhält man, wenn die einstellbaren Gewichte perfekt zu den festen Gewichten ausgerichtet sind.

Die Deckel wieder montieren. Vorsichtig den O-Ring dazwischen legen, ohne diesen zu beschädigen.

Für weitere Informationen ist Bezug auf das Handbuch des Unwuchtmotors auf der Webseite www.wamgroup.com zu nehmen.

Si pendant le fonctionnement des irrégularités se vérifient dans la descente du produit, on peut effectuer le réglage du motovibrateur, en augmentant ou en diminuant son intensité de vibration.

PROCEDURES DE REGLAGE DU MOTOVIBRATEUR

Le motovibrateur installé est à masses variables, donc, s'il s'avère nécessaire de changer le degré d'intensité des vibrations suivre les modalités prévues sur la notice UTILISATION ET ENTRETIEN (ci-joint) fournie par le constructeur.

La valeur de réglage du motovibrateur, monté sur le Big Bag est étroitement lié aux conditions d'utilisation.

Le réglage devra être effectué avant le démarrage.

Les paramètres à prendre en compte sont:

- Type de produit;
- Humidité;
- Température;
- Temps de stockage du BIG-BAG;
- Débit;
- Dimensions du BIG-BAG.

Le réglage prévu par le constructeur en phase de réception, est de 70%.

S'il s'avère nécessaire de modifier cette valeur il est conseillé de procéder graduellement.

Si le résultat n'est pas satisfaisant, avant de faire un nouveau réglage, vider la trémie du produit pour ne pas avoir les résidus des essais précédents.

L'OPÉRATION DOIT ÊTRE EXÉCUTÉE UNIQUEMENT PAR DU PERSONNEL QUALIFIÉ ET AVEC L'ALIMENTATION DÉBRANCHÉE.

- Déposer les couvercles latéraux en dévissant les vis.
- Desserrer le boulon d'Allen (photo 1), déplacer la masse mobile (photo 2) dans la position désirée.
- Resserrer à fond l'écrou à six pans creux (Photo 3)

Les poids doivent être réglés de manière parfaitement identique et dans le même sens de deux côtés.

L'intensité maximale s'obtient avec les poids réglables parfaitement alignés aux poids fixes.

Remonter le couvercles en montant, sans l'endommager, le joint d'étanchéité OR.

Pour tout complément d'informations faire référence au Manuel du motovibrateur repérable sur le site www.wamgroup.com.

Se durante il funzionamento si riscontrano delle irregolarità nella discesa del prodotto si può effettuare la regolazione del motovibratore, aumentando o riducendo la sua intensità di vibrazione.

PROCEDURE PER LA REGOLAZIONE DEL MOTOVIBRATORE

Il motovibratore installato è a masse variabili, pertanto, nel caso si renda necessario variare il grado di intensità delle vibrazioni seguire le modalità previste sul libretto USO E MANUTENZIONE (in allegato) fornito dal Costruttore.

Il valore di regolazione del motovibratore, montato sul big bag, è strettamente legato alle condizioni di utilizzo.

La regolazione dovrà essere effettuata prima dell' avviamento.

I parametri da considerare sono:

- Tipo di prodotto;
- Umidità;
- Temperatura;
- Tempo di stoccaggio del BIG-BAG;
- Portata;
- Dimensioni del BIG-BAG.

La regolazione prevista dal Costruttore in fase di collaudo, è del 70%.

Nel caso si renda necessario modificare tale valore è consigliabile procedere gradualmente.

Se il risultato non è soddisfacente, prima di procedere a una nuova regolazione, svuotare la tramoggia dal prodotto per non avere residui di prove precedenti.

L'OPERAZIONE DEVE ESSERE ESEGUITA ESCLUSIVAMENTE DA PERSONALE QUALIFICATO E CON ALIMENTAZIONE DISINSERITA.

- Togliere i coperchi laterali svitando le viti.
- Allentare il dado a brugola (foto 1), spostare la massa mobile (foto 2) nella posizione desiderata.
- Riserrare a fondo il dado a brugola (Foto 3)

Le masse devono essere regolate in modo perfettamente uguale e nello stesso senso in entrambi i lati.

La massima intensità si ottiene con le masse regolabili perfettamente allineate alle masse fisse.

Rimontare i coperchi, interponendo, senza danneggiarla, la guarnizione OR di tenuta.

Masses - Masse

Before starting up the plant, it is necessary to carry out a series of checks in order to prevent problems or risks.
Make sure that all the equipment components are positioned and fitted properly.
Carefully check all the electric and pneumatic connections.

Vor Inbetriebnahme des Systems muß eine Reihe von Prüfungen vorgenommen werden, um Probleme oder Risiken zu vermeiden.
Sicherstellen, daß alle Bestandteile der Vorrichtung korrekt aufgestellt und befestigt wurden.
Alle elektrischen und pneumatischen Anschlüsse sorgfältig prüfen.

Avant de mettre en marche l'installation il est important d'effectuer une série de contrôles afin de prévenir les problèmes ou les risques.
S'assurer que tous les composants de la machine sont placés de la bonne manière et fixés correctement.
Vérifier soigneusement tous les raccordements électriques et pneumatiques.

Prima di effettuare l' avviamento dell' impianto è importante che vengano eseguiti una serie di controlli al fine di prevenire problemi o rischi.
Accertarsi che tutti i componenti della macchina siano collocati in modo opportuno e correttamente fissati.
Verificare accuratamente tutti gli allacciamenti elettrici e pneumatici.

OPERATION
The work cycle can be:
- automatic
- manual.

The cylinders may operate:
- in pairs (the two pneumatic hammers move in parallel towards the FIBC).
- In single mode (the two pneumatic hammers move alternately).

FUNKTIONSWEISE
Der Betriebszyklus kann wie folgt ablaufen:
- automatisch
- von Hand.

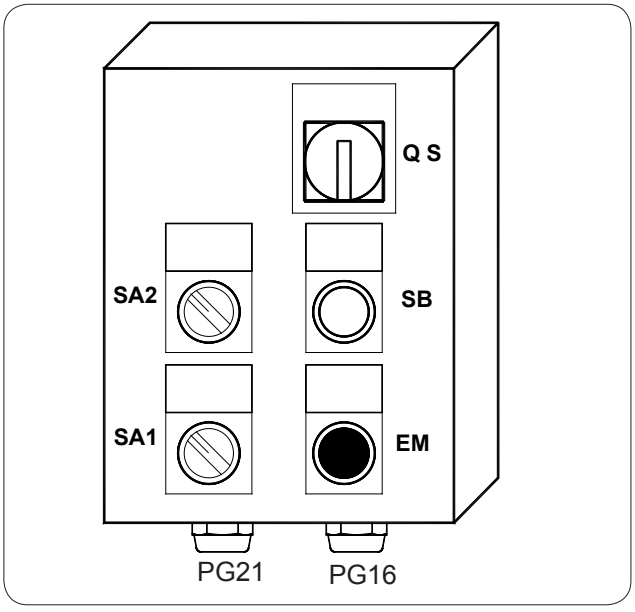
Der Betrieb der Zylinder erfolgt:
- gleichzeitig (die beiden Betätigungsstangen fahren parallel zum BIG-BAG vorwärts)
- abwechselnd (die beiden Betätigungsstangen fahren abwechselnd vorwärts).

FONCTIONNEMENT
Le cycle de fonctionnement peut être:
- automatique
- manuel

En outre il est prévu que les cylindres fonctionnement de manière:
- simultanée (les deux percuteurs avancent parallèles vers le BIG-BAF).
- alternée (les deux percuteurs avancent alternativement).

FUNZIONAMENTO
Il ciclo di funzionamento può essere:
- automatico
- manuale.

Inoltre è previsto un funzionamento dei cilindri:
- simultaneo (i due percussori avanzano in parallelo verso il BIG-BAG).
- alternato (i due percussori avanzano alternativamente)



A - AUTOMATIC - SINGLE operation

- Turn on the main switch QS to power the panels (electric and pneumatic).
- Open the compressed air on/off valve (to be provided by the Customer) to supply the electric panel.
- Turn selector SA2 to the "AUTOMATIC" position.
- Turn selector SA1 to the "SINGLE" position.
- Set the operating times on timers KT1-KT2-KT3.

A - Betrieb AUTOMATISCH - ABWECHSELND

- Den Hauptschalter QS drehen, um die Schalttafeln (elektrisch und pneumatisch) spannungsführend zu machen.
- Das Sperrventil der Druckluft (Installation auf Veranlassung des Kunden) zum Speisen der elektrischen Schalttafel öffnen.
- Den Wahlschalter SA2 auf die Stellung „AUTOMATIK" drehen.
- Den Wahlschalter SA1 auf die Stellung „SINGLE" drehen.
- Auf den Zeitschaltern KT1-KT2-KT3 die Betriebszeiten einstellen.

A - Fonctionnement AUTOMATIQUE - ALTERNÉ

- Tourner l'interrupteur général QS pour mettre les armoires sous tension (électrique et pneumatique).
- Ouvrir la vanne d'arrêt de l'air comprimé (installation à la charge du Client) pour alimenter l'armoire électrique.
- Tourner le sélecteur SA2 sur la position «AUTOMATIQUE».
- Tourner le sélecteur SA1 sur la position «SINGLE».
- Programmer les temps de fonctionnement sur les temporisateurs KT1-KT2-KT3

A - Funzionamento AUTOMATICO - ALTERNATO

- Ruotare interruttore generale QS per dare tensione ai quadri (elettrico e pneumatico).
- Aprire la valvola di intercettazione aria compressa (installazione a carico del Cliente) per alimentare il quadro elettrico.
- Ruotare il selettore SA2 in posizione "AUTOMATICO".
- Ruotare il selettore SA1 in posizione "SINGLE".
- Impostare i tempi di funzionamento sui timer KT1-KT2-KT3.

- Press the cycle start pushbutton SB (the automatic cycle relay KA0 is energized - solenoid valve YV1 is energized and it pushes activator 1 regulated by timer KT1 forward.
- At the end of the time set on timer KT1, solenoid valve YV2 is energized which pushes activator 2 regulated by timer KT2 forward and at the same time activator 1 is drawn back.
- At the end of the time set on timer KT2, activator 2 is drawn back and at the same time energizes relay KA1 which holds the two activators in pause in the retracted position.
  The pause time is regulated by timer KT3 which, at the end of the set time, allows the next cycle to be started up.
- When the FIBC is completely empty, select push-button EM to stop the working of the system.

- Die Starte Zyklus-Start SB drücken (das Relais Zyklus Automatik KA0 zieht an - das Magnetventil YV1 wird erregt, das den Trieb 1, der vom Timer KT1 aktiviert wird, vorwärts schiebt.
- Nach Ablauf der auf Zeitschalter KT1 eingestellten Zeit erregt sich das Magnetventil YV2, das den Trieb 2, der vom Timer KT2 aktiviert wird, vorwärts schiebt, wobei der Trieb 1 sich gleichzeitig rückwärts bewegt.
- Nach Ablauf der auf Zeitschalter KT2 eingestellten Zeit bewegt sich der Trieb 2 rückwärts und gleichzeitig zieht das Relais KA1 an, das die beiden Triebe in der zurückgefahrenen Position in der Pause hält.
  Die Pausenzeit wird vom Zeitschalter KT3 geregelt, der nach Ablauf der Zeit die Wiederaufnahme des anschließenden Zyklus gestattet.
- Nach dem Entleeren des Big-Bag die Taste EM wählen, um den Betrieb des Systems zu stoppen.

- Appuyer sur le bouton de marche cycle SB (excitation du relais de cycle automatique KA0 - excitation de l'électrovanne YV1 qui pousse vers l'avant l'activateur 1 réglé par le temporisateur KT1).
- Quand le temps programmé sur le temporisateur KT1 est terminé, l'électrovanne YV2 s'excite et pousse vers l'avant l'activateur 2 réglé par le temporisateur KT2 et simultanément l'activateur 1 recule.
- Quand le temps programmé sur le temporisateur KT2 est terminé, l'activateur 2 recule et simultanément s'excite le relais KA1 qui tient en pause les deux activateurs dans la position rentrée.
  Le temps d'arrêt est réglé par le temporisateur KT3 qui à la fin du temps permet la reprise du cycle successif.
- Quand le vidage du Big-Bag est terminé, appuyer sur le bouton EM pour arrêter le fonctionnement du système.

- Premere il pulsante di marcia ciclo SB (si eccita il relè di ciclo automatico KA0 - si eccita l'elettrovalvola YV1 che spinge in avanti l'attivatore 1 regolato dal timer KT1.
- Scaduto il tempo impostato sul timer KT1 si eccita l'elettrovalvola YV2 che spinge in avanti l'attivatore 2 regolato dal timer KT2 e contemporaneamente retrocede l'attivatore 1.
- Scaduto il tempo del timer KT2 l'attivatore 2 retrocede e contemporaneamente si eccita il relè KA1 che tiene in pausa i due attivatori in posizione retratta.
  Il tempo di sosta è regolato dal timer KT3 che a fine tempo consente la ripresa del ciclo successivo).
- Completato lo svuotamento del Big - Bag selezionare il pulsante EM per arrestare il funzionamento del sistema.

B - AUTOMATIC - IN PAIRS operation

- Turn on the main switch QS to power the panels (electric and pneumatic).
- Open the compressed air on/off valve (to be provided by the Customer) to supply the electric panel.
- Turn selector SA2 to the "AUTOMATIC" position.
- Turn selector SA1 to the "IN PAIRS" position.
- Set the operating times on timers KT1-KT2-KT3.
- Press the cycle start pushbutton SB (the automatic cycle relay KA0 is energized - solenoid valves YV1 and YV2 are energized and simultaneously push the two pneumatic hammers for the time set on timer KT1.
- At the end of the time set on timer KT1, both pneumatic hammers are retracted and remain in pause for the time set on timer KT3.
- When the FIBC is completely empty, select push-button EM to stop the operation of the system.

B - Betrieb AUTOMATISCH - SIMULTAN

- Den Hauptschalter QS drehen, um die (elektrische und pneumatische) Schalttafel spannungsführend zu machen.
- Das Sperrventil der Druckluft öffnen (Installation durch den Kunden), um die elektrische Schalttafel zu speisen.
- Den Wahlschalter SA2 auf die Stellung „AUTOMATIK" drehen.
- Den Wahlschalter SA1 auf die Stellung „IN PAIRS" drehen.
- Die Betriebszeiten auf den Zeitschaltern KT1-KT3 einstellen.
- Die Taste Zyklus Start SB drücken (das Relais Zyklus Automatik KA0 zieht an - die Magnetventile YV1 und YV2 erregen sich, welche die beiden Betätigungsstangen für die auf Zeitschalter KT1 eingestellte Zeit gleichzeitig nach vorn schieben.
- Nach Ablauf der auf dem Zeitschalter KT1 eingestellten Zeit fahren beide Betätigungsstangen zurück und bleiben die auf Zeitschalter KT3 eingestellte Zeit in der Pause).
- Nach Ablauf der Entleerung des Big-Bag die Taste EM wählen, um den Betrieb des Systems anzuhalten.

B - Fonctionnement AUTOMATIQUE - SIMULTANÉ

- Tourner l'interrupteur général QS pour mettre les armoires sous tension (électrique et pneumatique).
- Ouvrir la vanne d'arrêt de l'air comprimé (installation à la charge du Client) pour alimenter l'armoire électrique.
- Tourner le sélecteur SA2 sur la position «AUTOMATIQUE».
- Tourner le sélecteur SA1 sur la position «IN PAIRS».
- Programmer les temps de fonctionnement sur les temporisateurs KT1-KT2-KT3.
- Appuyer sur le bouton de marche cycle SB (excitation du relais de cycle automatique KA0 - excitation des électrovannes YV1 et YV2 qui poussent vers l'avant simultanément les deux percuteurs pour la durée programmée sur le temporisateur KT1).
- Quand le temps programmé sur le temporisateur KT1 est terminé, les deux percuteurs reculent et restent en pause pendant le temps programmé sur le temporisateur KT3.
- Quand le vidage du Big-Bag est terminé, appuyer sur le bouton EM pour arrêter le fonctionnement du système.

B - Funzionamento AUTOMATICO - SIMULTANEO

- Ruotare interruttore generale QS per dare tensione ai quadri (elettrico e pneumatico).
- Aprire la valvola di intercettazione aria compressa (installazione a carico del Cliente) per alimentare il quadro elettrico.
- Ruotare il selettore SA2 in posizione "AUTOMATICO".
- Ruotare il selettore SA1 in posizione "IN PAIRS".
- Impostare i tempi di funzionamento sui timer KT1-KT3.
- Premere il pulsante di marcia ciclo SB (si eccita il relè di ciclo automatico KA0 - si eccitano le elettrovalvola YV1 e YV2 che spingeranno in avanti contemporaneamente i due percussori per il tempo impostato sul timer KT1.
- Scaduto il tempo impostato sul timer KT1 retrocedono ambedue i percussori restando in pausa per il tempo impostato sul timer KT3).
- Completato lo svuotamento del Big - Bag selezionare il pulsante EM per arrestare il funzionamento del sistema.

C - MANUAL - IN PAIRS operation

- Turn on the main switch QS to power the panels (electric and pneumatic).
- Open the compressed air on/off valve (to be provided by the Customer) to supply the electric panel.
- Turn selector SA2 to the “MANUAL” position.
- Turn selector SA1 to the “IN PAIRS” position.
- Press the cycle start pushbutton SB. The system works as long as the start pushbutton is kept pressed.

C - Betrieb VON HAND - SIMULTAN

- Den Hauptschalter QS drehen, um den (elektrischen und pneumatischen) Schaltkasten spannungsführend zu machen.
- Das Sperrventil der Druckluft öffnen (Installation durch den Kunden), um die elektrische Schalttafel zu speisen.
- Den Wahlschalter SA2 auf die Stellung „VON HAND“ drehen.
- Den Wahlschalter SA1 auf die Stellung „SIMULTAN“ drehen.
- Die Start-Taste SB drücken. Das System funktioniert, solange man die Start-Taste gedrückt hält.

C - Fonctionnement MANUEL - SIMULTANÉ

- Tourner l’interrupteur général QS pour mettre les armoires sous tension (électrique et pneumatique).
- Ouvrir la vanne d’arrêt de l’air comprimé (installation à la charge du Client) pour alimenter l’armoire électrique.
- Tourner le sélecteur SA2 sur la position «MANUEL».
- Tourner le sélecteur SA1 sur la position «SIMULTANÉ».
- Appuyer sur le bouton de marche SB. Le système fonctionne tant que le bouton de marche est maintenu enfoncé.

C - Funzionamento MANUALE - SIMULTANEO

- Ruotare interruttore generale QS per dare tensione ai quadri (elettrico e pneumatico).
- Aprire la valvola di intercettazione aria compressa (installazione a carico del Cliente) per alimentare il quadro elettrico.
- Ruotare il selettore SA2 in posizione “MANUALE”.
- Ruotare il selettore SA1 in posizione “SIMULTANEO”.
- Premere il pulsante di marcia SB. Il sistema funziona finché si tiene premuto il pulsante di marcia.

D - MANUAL - SINGLE operation

- Turn on the main switch QS to power the panels (electric and pneumatic).
- Open the compressed air on/off valve (to be provided by the Customer) to supply the electric panel.
- Turn selector SA2 to the “MANUAL” position.
- Turn selector SA1 to the “SINGLE” position.
- Press the start pushbutton SB. The system works as long as the start pushbutton is kept pressed.

D - Betrieb VON HAND - ABWECHSELND

- Den Hauptschalter QS drehen, um den (elektrischen und pneumatischen) Schaltkasten spannungsführend zu machen.
- Das Sperrventil der Druckluft öffnen (Installation durch den Kunden), um die elektrische Schalttafel zu speisen.
- Den Wahlschalter SA2 auf die Stellung „VON HAND“ drehen.
- Den Wahlschalter SA1 auf die Stellung „ABWECHSELND“ drehen.
- Die Start-Taste SB drücken. Das System funktioniert, solange man die Start-Taste gedrückt hält.

D - Fonctionnement MANUEL - ALTERNÉ

- Tourner l’interrupteur général QS pour mettre les armoires sous tension (électrique et pneumatique).
- Ouvrir la vanne d’arrêt de l’air comprimé (installation à la charge du Client) pour alimenter l’armoire électrique.
- Tourner le sélecteur SA2 sur la position «MANUEL».
- Tourner le sélecteur SA1 sur la position «ALTERNÉ».
- Appuyer sur le bouton de marche SB. Le système fonctionne tant que le bouton de marche est maintenu enfoncé.

D - Funzionamento MANUALE - ALTERNATO

- Ruotare interruttore generale QS per dare tensione ai quadri (elettrico e pneumatico).
- Aprire la valvola di intercettazione aria compressa (installazione a carico del Cliente) per alimentare il quadro elettrico.
- Ruotare il selettore SA2 in posizione “MANUALE”.
- Ruotare il selettore SA1 in posizione “ALTERNATO”.
- Premere il pulsante di marcia SB. Il sistema funziona finché si tiene premuto il pulsante di marcia.

CHECKS MADE AT THE FACTORY

The equipment has been subjected to actual operating tests load-free for about 15 minutes at the factory, so as to guarantee correct start-up.

VOM HERSTELLER DURCHGEFÜHRTE KONTROLLEN

Die Vorrichtung wurde im Herstellerwerk einer abschließenden Funktionskontrolle unterzogen der leeren Vorrichtung auf die Dauer von ca. 15 Minuten., um eine korrekte Inbetriebnahme zu garantieren.

CONTRÔLES EFFECTUÉS DANS NOS ETABLISSEMENTS

Cette machine a été soumise, dans l’ établissement du constructeur un fonctionnement à vide pendant environ 15 minutes, à un essai fonctionnel de réception afin de garantir une mise en service correcte.

CONTROLLI EFFETTUATI NEI NOSTRI STABILIMENTI

La macchina ha subito, presso gli stabilimenti del costruttore, un reale collaudo funzionale a vuoto per circa 15 minuti così da garantire la corretta messa in esercizio.

MAINTENANCE

Before carrying out any operation, make sure the machine is in safety condition

In this manual, from here onwards "setting the machine in safety conditions" will indicate the following operations:

- Make sure the machine is disconnected from all electric power supply sources.
- Make sure the machine is completely stopped.
- Wait for the internal and external machine temperatures to reach values not dangerous to the touch.
- Provide sufficient lighting around the machine operating area (the operators may be provided with electric lamps with protection degree IP65, if necessary).
- Make sure the machine is disconnected from the compressed air supply.
- Wait for the powder mass inside the silo to settle down completely.

Before carrying out any operation on the machine (maintenance or cleaning), the operators must use suitable personal protection equipment:

- antistatic safety footwear (certified)
- antistatic protective clothing (certified)
- helmet
- antistatic, cut-proof gloves
- safety masks

In addition to these, use the safety devices specified in the safety chart of the product handled.

Machine operations must be carried out with the machine in safety conditions disconnected from all energy sources and in the absence of airborne dust; follow the machine stop procedure for maintenance.

All maintenance operations, whether ordinary or extraordinary, must be carried out by adopting the suitable personal protection equipment required and by following the instructions in this manual strictly.

To reach the parts at the top of the machine, use a work platform, which must be chosen in such a way as to prevent risk of slipping, tripping or falling of operators.

WARTUNG

Vor Eingriffen jeder Art am Gerät überprüfen, ob dieses in einen sicheren Zustand versetzt wurde.

In diesem Handbuch verstehen wir unter dem Begriff „das Gerät in einen sicheren Zustand bringen" die folgenden Maßnahmen:

- Sicherstellen, dass die Maschine von allen elektrischen Versorgungsquellen getrennt ist.
- Sicherstellen, dass alle beweglichen Geräteteile still stehen.
- Sicherstellen, dass die Innen- und Außentemperatur des Gerä-tes einen Wert erreicht hat, der bei Berührung ungefährlich ist.
- Dafür sorgen, dass der Bereich rings um das Gerät gut be-leuchtet ist (eventuell indem man das Personal mit elektrischen Lampen mit Schutzart IP65 ausstattet).
- Sicherstellen, dass das Gerät vom Versorgungsnetz für Druckluft abgetrennt ist.
- Abwarten, bis der Staub, der sich innerhalb des Gerätes befindet, sich vollkommen abgesetzt hat.

Für jede Arbeit, die am Gerät auszuführen ist, (Wartung und Reinigung) muss das Personal mit den entsprechenden persönlichen Schutzausrüstungen (PSA) ausgestattet sein:

- Antistatische Sicherheitsschuhe (zertifiziert)
- Antistatische Schutzkleidung (zertifiziert)
- Schutzhelme
- Antistatische Schnittschutz-handschuhe
- Atemschutzmasken.

Außerdem auch die Schutzvorrichtungen, die auf dem Sicherheitsdatenblatt zu filternden Produkts stehen.

Die Wartungsarbeiten müssen bei in den sicheren Zustand gebrachter Maschine ausgeführt werden, wenn diese von allen Energiequellen getrennt ist, und in Abwesenheit von durch die Luft verteiltem Staub: Die ganze Prozedur zum Anhalten der Maschine durchführen, bevor man mit der Wartung beginnt.

Alle Wartungsarbeiten, sowohl regelmäßige als auch außerordentliche, müssen unter Anwendung aller erforderlichen persönlichen Schutzeinrichtu ngen und unter Beachtung aller Angaben dieses Handbuchs ausgeführt werden.

Wenn Teile der Maschine erreicht werden müssen, die sich in größerer Höhe befinden, benutzen Sie eine Arbeitsbühne, die so zu wählen ist, dass Ausrutsch-, Stolper- und Abstürzgefahren für das Personal vermieden werden.

ENTRETIEN

Avant d'effectuer une quelconque intervention sur la machine s'assurer que celle-ci a été placée en condition de sécurité.

Dans le présent manuel la consigne "mettre la machine en sécurité" indique les opérations suivantes :

- S'assurer que la machine est débranchée de toutes les alimentations électriques;
- S'assurer que la machine est complètement arrêtée;
- Attendre que la température intérieure et extérieure de la machine a atteint une valeur qui n'est pas dangereuse au toucher;
- Eclairer correctement la zone qui entoure la machine (en dotant éventuellement les opérateur de lampes électriques avec degré de protection IP65);
- S'assurer que la machine est débranchée du réseau de distribution de l'air comprimé;
- Attendre que la poussière contenue à l'intérieur de la machine se soit entièrement déposée.

Pour toute opération à effectuer sur la machine (entretien et nettoyage), les opérateurs devront être munis des équipements de protection individuelle (EPI) :

- Chaussures de sécurité antistatiques (certifiées)
- Vêtements de protection antistatiques (certifiés)
- Casque
- Gants anticoupure antistatiques
- Maques de protection respiratoire

En outre les équipements de protection prévus par la fiche de sécurité du produit filtré.

Les opérations d'entretien doivent être effectuées avec la machine en condition de sécurité, débranché de toute source d'énergie et en absence de poussières dispersée dans l'air : effectuer toute la procédure d'arrêt de la machine avant de commencer l'entretien.

Toutes les opérations d'entretien, aussi bien ordinaire qu'extraordinaire, doivent être exécutées en adoptant tous les dispositifs de protection individuelle requis et en suivant attentivement les indications de cette notice.

Si l'on doit atteindre des parties de la machine, utiliser une plate-forme aérienne de travail qui devra être choisie de manière à éviter les dangers de glissement, heurt ou chute des opérateurs.

MANUTENZIONE

Prima di effettuare un qualsiasi intervento sulla macchina assicurarsi che questa sia messa in sicurezza.

In seguito nel presente manuale indicheremo con la dicitura "mettere in sicurezza la macchina" le seguenti operazioni:

- accertarsi che la macchina sia scollegata da tutte le alimentazioni elettriche;
- accertarsi che la macchina sia completamente ferma;
- attendere che la temperatura interna ed esterna della macchina abbia raggiunto un valore non pericoloso al tatto;
- provvedere ad illuminare correttamente la zona circostante alla macchina (eventualmente dotando gli operatori di lampade elettriche con grado di protezione IP65);
- accertarsi che la macchina sia scollegata dalla rete di distribuzione d'aria compressa;
- attendere che la polvere contenuta all'interno della macchina sia completamente depositata.

Per qualsiasi operazione da effettuarsi sulla macchina (manutenzioni e pulizia), gli operatori dovranno essere muniti degli appositi dispositivi di protezione individuale (DPI):

- scarpe antinfortunistiche antistatiche (certificate)
- indumenti protettivi antistatici (certificati)
- casco
- guanti antitaglio antistatici
- mascherine protettive

Inoltre occorre utilizzare tutti i dispositivi di protezione previsti dalla scheda di sicurezza del prodotto filtrato.

Le operazioni di manutenzione devono essere effettuate a macchina in sicurezza, scollegata da ogni fonte di energia e in assenza di polvere aerodispersa: seguire tutta la procedura di arresto della macchina prima di iniziare la manutenzione.

Tutte le operazioni di manutenzione, sia ordinaria che straordinaria, devono essere eseguite adottando tutti i dispositivi di protezione personale richiesti e seguendo attentamente le indicazioni di questo manuale.

Laddove si debbano raggiungere parti della macchina in quota, utilizzare una piattaforma aerea di lavoro che dovrà essere scelta in modo da evitare pericoli di scivolamento, inciampo o caduta per gli operatori.

The machine can be used with a very large range of products; this involves different degrees of wear on some components.

The recommended maintenance schedules are therefore subject to modifications.

It is always preferable to program maintenance operations periodically instead of having to act in emergency conditions so as to eliminate potential stops during periods of peak production.

Failure to follow the instruc-tions given below can lead to risks for the operators and lead to invalidation of the warranty on the equipment supplied.

CAUTION
All maintenance, lubrication and cleaning operations must be performed with the machine in safety conditions.

For hazardous materials, suitable PPD (personal protection devices) must be used in accordance with the safety chart of the powder handled.

Maintenance must be done only by qualified technicians.
Lift and handle all heavy parts using suitable lifting equipment.
Make sure that the parts or components are supported by suitable harnesses or hooks.
Ensure that there is no one standing in the area where the load is being lifted.

Remember that careful periodic maintenance and correct use are essential requirements for guaranteeing high machine performance.
To ensure that the machine functions constantly and normally and to prevent the guarantee's replacement clauses being invalidated, we recommend that you always use original spare parts.

Maintenance of the vibrator motor must be carried out in accordance with the instructions given in the relevant manual.

Das Gerät kann für unter-schiedliche Medien eingesetzt werden, was einen unterschiedlich schnellen Verschleiß einiger Komponenten zur Folge haben kann.

Die empfohlenen Wartungsabstände können daher Änderungen unterliegen.

Es ist immer besser, regelmäßige Wartungseingriffe zu planen, statt erst im Notfall eingreifen zu müssen, weil dann die Gefahr etwaiger Ausfallzeiten nicht besteht, wenn max. Produktionsauslastung vorgesehen ist.

Die Nichtbeachtung der folgenden Anweisungen kann zur Gefährdung des Personals und zum Ungültigwerden der Garantie auf die gelieferten Maschinen führen.

ACHTUNG
Vor der Ausführung von Wartung, Schmierung oder Reinigungsarbeiten ist die Maschine in den sicheren Zustand zu bringen.

Für gefährliches Schüttgut sind die persönlichen Schutzausrüstungen zu benutzen, die auf den Sicherheitsdatenblättern des behandelten Schüttguts beschrie-ben sind.

Die Wartungsarbeiten sind von spezialisierten Technikern auszuführen.
Alle schweren Einzelteile mit einer angemessenen Hubeinrichtung heben und transportieren.
Sicherstellen, daß Gruppen oder Einzelteile von passenden Anschlagelementen und Haken gehalten werden.
Sicherstellen, daß sich in der Nähe der zu hebenden Maschine keine Personen aufhalten.
Eine genaue und regelmäßige Wartung wie auch eine korrekte Benutzung sind in der Regel die Voraussetzungen für eine hohe Leistung der Maschine.
Um einen konstanten und ordnungsgemäßen Betrieb zu garantieren und zu vermeiden, die Voraussetzungen für die Garantiegewähr zu verlieren, sollte man immer nur Originalersatzteile verwenden.

Die Wartung des Unwuchtmotors ist gemäß der Angaben im Handbuch desselben vorzunehmen.

Il est rappelé que la machine peut travailler avec une très vaste gamme de produits et ceci comporte une rapidité différente dans l'usure de certains composants.

Le calendrier des intervention d'entretien est donc susceptible de variations.

Il convient de programmer régulièrement les interventions au lieu d'intervenir en conditions d'émergence, afin d'éliminer les arrêts potentiels pendant les périodes de production maximale.

L' inobservation des consignes suivantes peut provoquer des risques pour les opérateurs et invalider la garantie des machines fournies.

ATTENTION
Toute intervention d'entretien, lubrification et nettoyage doit être exécutée la machine en condition de sécurité.

Pour les matières dangereuses il faut utiliser les EPI appropriés conformément à la fiche de sécurité de la poudre traitée.

Les opérations d' entretien doivent être effectuées par des techniciens spécialisés.
Soulever et manipuler les pièces lourdes avec un moyen de levage approprié.
S' assurer que les groupes ou les pièces sont soutenues par des élingues et des crochets appropriés.
S' assurer qu' il n' y a personne à proximité de la charge à soulever.
Il est rappelé qu' un entretien régulier et précis ainsi qu'une utilisation correcte sont les conditions indispensables pour garantir un rendement élevé de la machine.
Pour assurer un fonctionnement constant, régulier et ne pas risquer de ne plus bénéficier du remplacement sous garantie, il est recommandé d'utiliser uniquement des pièces détachées d'origine.

L'entretien du motovibrateur doit être réalisé en suivant les indications contenues dans le manuel. tuellement branché à la RSM).

Si ricorda che la macchina può lavorare con una vastissima gamma di prodotti, e ciò comporta una diversa rapidità nell' usura di alcuni componenti.

I tempi di intervento di manutenzione consigliati sono quindi suscettibili di modifiche.

E' sempre preferibile programmare periodicamente gli interventi anziché dover intervenire in condizioni di emergenza così da eliminare potenziali arresti durante i periodi di massima produzione.

Il non attenersi strettamente alle seguenti istruzioni può causare rischi sugli operatori ed invalidare la garanzia sulle macchine fornite.

ATTENZIONE
Ogni intervento di manutenzione, lubrificazione e pulizia deve essere eseguito a macchina in sicurezza.

Per materiali pericolosi si devono usare i DPI idonei in accordo con la scheda di sicurezza della polvere trattata.

Le operazioni di manutenzione devono essere effettuate da tecnici specializzati.
Sollevare e maneggiare tutti i particolari pesanti con un mezzo di sollevamento adatto.
Assicurarsi che i gruppi od i particolari siano sostenuti da imbragature e ganci appropriati.
Accertarsi che non ci siano persone in prossimità del carico da sollevare.
Si ricorda che una precisa e periodica manutenzione ed un uso corretto sono la premessa indispensabile per garantire un elevato rendimento della macchina.
Per assicurare il suo costante e regolare funzionamento ed evitare che vengano a mancare i presupposti per la sostituzione in garanzia, si raccomanda di utilizzare sempre ricambi originali.

La manutenzione del motovibratore deve essere eseguita secondo le indicazioni contenute nel manuale dello stesso.

PERIODIC CHECKS	REGELMÄSSIGE KONTROLLEN	CONTRÔLES PÉRIODIQUES	CONTROLLI PERIODICI
Before every work shift Check the safety devices to ensure they are present and intact.	**Vor jeder Schicht** Sicherstellen, daß die Schutzvorrichtungen vorhanden und unversehrt sind.	**Avant chaque poste de travail** Vérifier la présence et l'intégrité des protections.	**Prima di ogni turno di lavoro** Verificare la presenza e l'integrità delle protezioni.
After every work shift Make sure that the passage of the material is free of residue; if this is not the case, clean carefully.	**Nach jeder Schicht** Sicherstellen, daß der Produktdurchlaufbereich keine Produktreste aufweist; an-dernfalls ist dieser Bereich sorgfältig zu reinigen.	**Après chaque poste de travail** Vérifier que la zone de passage du produit est libre de tous résidus; dans le cas contraire nettoyer soigneusement	**Dopo ogni turno di lavoro** Verificare che la zona di passaggio del materiale sia libera da residui dello stesso ; se non lo è pulire accuratamente
Every 100 hours of operation (every 2 weeks) Check the condition of the FIBC support seal.	**Alle 100 Betriebsstunden (alle 2 Wochen)** Den Zustand der Dichtungen prüfen, auf denen der Sack aufliegt.	**Toutes les 100 heures de travail (tous les 15 jours)** Contrôler l'état du joint d'appui du Big Bag.	**Ogni 100 ore di lavoro (ogni 15 giorni)** Controllare lo stato di efficienza della guarnizione di appoggio Big Bag.
Every 200 hours of operation (monthly) **1** - Check the appearance of the structure, paying particular attention to the state of: - welds in general; - motovibrator fixing plate; - damper support plates.	**Alle 200 Betriebsstunden (monatlich)** **1** - Das Aussehen der Struktur prüfen, wobei besonders auf folgendes zu achten ist: - Schweißstellen im allgemeinen; - Befestigungsplatte des Vibrationsmotors; - Trageplatten der Schwingungsdämpfer.	**Toutes les 200 heures de travail (tous les mois)** **1** - Vérifier l' aspect de la structure du fond en faisant attention à: - points de soudures; - plaque de fixation du motovibrateur; - plaques de soutien des dispositifs anti-vibration.	**Ogni 200 ore di lavoro (ogni mese)** **1** - Verificare l' aspetto della struttura prestando attenzione a: - saldature in genere; - piastra di fissaggio del motovibratore; - piastre di sostegno degli antivibranti.
2 - Check that all bolts are correctly tightened, in par-ticular the motovibrator fixing bolts.	**2** - Kontrolle der Schrauben auf festen Sitz, insbesondere der Schrauben zur Befestigung des Vibrations-motors.	**2**- Contrôler si les boulons ont été serrés correctement en faisant particulièrement attention à ceux qui fixent le motovibrateur.	**2** - Controllare il corretto serraggio dei bulloni prestando particolare attenzione a quelli di fissaggio del motovibratore.
3 - Check the seal for cracks or splits.	**3** - Sicherstellen, daß die Dichtungen keine Risse oder Bruchstellen aufweisen.	**3** - Contrôler que les joint ne présent aucune fissure ou lacération.	**3** - Controllare che non ci siano screpolature o fessurazioni nella guarnizione.
4 - Check the dampers for signs of collapse (load deformation must not exceed 10% of nominal height).	**4**- Sicherstellen, daß die Schwingungsdämpfer nicht verformt sind (die Verformung unter Lasteinwirkung darf nicht mehr als 10% über der Nennhöhe liegen).	**4**- Contrôler que les dispositifs anti-vibration ne sont pas défoncés (la déformation ne doit pas dépasser 10% de la hauteur nominale).	**4** - Controllare che gli antivibranti non presentino segni di sfondamento (la deformazione sotto carico non deve superare il 10% dell' altezza nominale).
5 - Check that the motovi-brator is as clean as pos-sible.	**5** - Sicherstellen, daß der Vibrationsmotor so sauber wie möglich ist.	**5**- Contrôler que le moto-vibrateur est toujours très propre.	**5** - Controllare che il motovibratore sia il più pulito possibile.
6 - Check the seals of the compressed air connections.	**6** - Die pneumatischen Anschlüsse auf dichten Sitz prüfen.	**6**- Contrôler la tenue des raccordements pneumatiques.	**6** - Controllare la tenuta dei collegamenti pneumatici.
7 - Check to make sure the pneumatic cylinders of the pneumatic actuators kit (if present) are in perfect working order.	**7**- Die Funktionstüchtigkeit der pneumatischen Zylinder des Bausatzes pneumatische Austraghilfen prüfen (falls vorhanden).	**7**- Contrôler l'efficacité des cylindres pneumatiques du kit des actionneurs pneumatiques (si prévu)	**7**- Controllare l' efficienza dei cilindri pneumatici del kit attivatori pneumatici (se presente)

The detergents to be used for cleaning the various equipment must have a flash point indicated in the respective safety chart, higher than the temperature reached in normal operating conditions and reasonably expected; therefore, there should be no risk of fire.

Die für die Reinigung der verschiedenen Geräte zu benutzenden Reinigungsmittel müssen einen Flammpunkt aufweisen (siehe entsprechendes Sicherheitsdatenblatt), der über der Temperatur liegt, die unter normalen und vorhersehbaren Einsatzbedingungen erreicht wird. Daher können sie keine Brandgefahr darstellen.

Les détergents à utiliser pour le nettoyage des différents appareillages doivent présenter un point d'inflammabilité, reporté sur les fiches de sécurité correspondantes, supérieur à la température pouvant être atteinte dans les conditions d'utilisation normales et raisonnablement prévisibles; par conséquent ils ne doivent pas déterminer un risque d'incendie.

I detergenti da impiegare per la pulizia delle varie apparecchiature devono presentare un punto di infiammabilità, riportato nelle rispettive schede di sicurezza, superiore alla temperatura raggiungibile nelle condizioni di utilizzo normali e ragionevolmente prevedibili; pertanto non possono determinare pericoli di incendio.

Before starting cleaning operations, set the machine in safety conditions.

Bevor man mit der Reinigung beginnt, ist das Gerät in den sicheren Zustand zu versetzen.

Avant de commencer les opérations de nettoyage, mettre la machine en condition de sécurité.

Prima di iniziare le operazioni di pulizia mettere in sicurezza la macchina.

When removing dust that may be present on the machine, take care to avoid spreading it in the surrounding area.

Beim Entfernen des Staubs, der eventuell im Gerät vorhanden ist, ist darauf zu achten, dass dieser nicht aufgewirbelt wird.

Lors du nettoyage de la poussière présente dans la machine, faire attention à ne pas la disperser dans le milieu ambiant.

Nella rimozione della polvere eventualmente presente nella macchina aver cura di non disperdere la polvere stessa nell'ambiente circostante.

The user must provide for the choice of suitable products for cleaning, depending on the type of plant and the product handled.

Der Benutzer muss Produkte auswählen, die für den jeweiligen Typ der Anlage und das behan-delte Schüttgut geeignet sind.

L'utilisateur devra choisir des produits appropriés pour le nettoyage en fonction de la typologie d'installation et de la matière transportée.

L'utilizzatore dovrà provvedere alla scelta dei prodotti idonei alle fasi di pulizia in base alla tipologia di impianto ed al prodotto trasportato.

the FIBC UNLOADERS meant for use with food products, provision must be made for cleaning at intervals depending on the type or product and plant.

Für die BIG-BAG Entleerstationen, die für Nahrungsmittel eingesetzt werden soll, ist die Häufigkeit der Reinigung abhängig von der Beschaffenheit des behandelten Produkts und vom Anlagentyp.

Pour les vide BIG-BAG destinés à être utilisés avec des produits alimentaires, il faut prévoir une phase de nettoyage à une fréquence qui dépend de la nature du produit et de l'installation.

Per gli svuota BIG-BAG destinati ad essere utilizzati con prodotti alimentari occorre prevedere una fase di pulizia con frequenza che dipende dalla natura del prodotto e dell'impianto.

In case of harmful products, the cleaning wastes must be conveyed to a tank and disposed off according to relevant regulations.

Bei schädlichen oder giftigen Produkten muss das Spülwasser in geeigneten Wannen aufgefangen und in Übereinstimmung mit den einschlägigen geltenden Bestimmungen entsorgt werden.

Dans le cas de produits nocifs, toxiques, les effluents de la phase de nettoyage doivent être convoyés dans une cuve appropriée et éliminés conformément à la norme en vigueur en la matière.

Nel caso di prodotti nocivi, tossici, i reflui della fase di pulizia dovranno essere convogliati in idonea vasca e smaltiti in accordo alle normative vigenti in materia.

OPERATION NOISE

The noise level values, expressed in dB(A) are obtained from readings made in an open field, at maximum performance, on 4 cardinal points at a distance of 1.5 metres from the equipment.

The values obtained are:

max. 75 dB(A)

The user may obtain values different from those indicated depending on the environment in which the equipment is installed.
It is therefore advisable to avoid installing the equipment near corners, walls and boxed metal structures.

The noise values refer to the machine complete with accessories, if any.

BETRIEBSGERÄUSCHE

Die Werte des Lärmpegels, ausgedrückt in dB(A), resultieren aus Freifeldmessungen bei maximaler Leistungsstufe, in den 4 Himmelsrichtungen, in 1,5 Meter Abstand von der Vorrichtung.

Meßwerte:

max. 75 dB(A)

Der Betreiber kann je nach der-Positionierung der Vorrichtung im Raum auf andere Werte treffen.
Daher die Vorrichtung nicht in Ecken, nahe an Wänden oder Metallstrukturen aufstellen.

Der Wert des Lärmpegels bezieht sich auf die Maschine mit eventuellen angebauten Zubehörteilen.

NIVEAU SONORE

Les valeurs du niveau sonore, exprimées en dB(A) sont obtenues à travers des lectures en champ libre, au rendement maximum, sur les 4 points cardinaux à 1,5 mètres de la machine.

Valeurs mesurées:

max. 75 dB(A)

L' utilisateur pourrait relever des valeurs différentes de celles indiquées en fonction de l' emplacement de la machine.
Il est préférable d' éviter de placer la machine à proximité des angles, murs, structures métalliques en caisson.

La valeur de bruit se réfère à la machine complète avec tout accessoire éventuel.

RUMOROSITÀ

I valori di rumorosità, espressi in dB (A) sono ottenuti attraverso letture eseguite in campo libero, al massimo rendimento, sui 4 punti cardinali a 1,5 metri dalla macchina.

I **valori rilevati sono:**

dB(A) max. 75

L' utilizzatore potrebbe rilevare valori diversi da quelli indicati in funzione della collocazione ambientale.
Pertanto è preferibile evitare di collocare la macchina in prossimità di angoli, pareti, strutture metalliche cassonate.

Il valore di rumorosità si riferisce alla macchina completa di eventuali accessori.

During operations and/or maintenance, the operators ARE NOT exposed to any residual risks.

In any case, it shall be the installer's responsibility to provide further indications and/or warning notices which may be necessary depending on the machine installation site and the material handled.

When servicing, inspecting or cleaning, the operator, after setting the machine to safety conditions, must use some of the individual protection devices indicated on the additional special plates to be affixed to the various machine sections.

Given below are examples of some warning notices which may be necessary, depending on the type of powder handled.

Während des Betriebs und der Wartung ist das Personal KEINEN Restgefahren ausgesetzt.

Es ist daher auf jeden Fall Aufgabe des Monteurs, weitere Angaben und /oder Schilder anzubringen, die in bezug auf den Einbauort und das behandelte Schüttgut erforderlich werden könnten.

Während der Wartungsarbeiten, der Inspektion und Reinigung und, nachdem man die Maschine in den sicheren Zustand gebracht hat, ist es auf jeden Fall erforderlich, dass das Bedienungspersonal einige persönliche Schutzausrüstungen benutzt, so wie durch Warnschilder, die in den einzelnen Bereichen des Geräts hinzuzufügen sind.

Untenstehend folgen Beispiele einiger Schilder, die je nach Art der verarbeiteten Pulver erforderlich sein könnten.

Pendant le travail et/ou l'entretien, les opérateurs ne sont PAS exposés à certains risques résiduels.

Dans tous le cas, l'installateur devra se charger d'apposer les indications ou les panneaux de signalisation qui peuvent s'avérer nécessaires en fonction du lieu d'installation de la machine et de la matière traitée.

Pendant les activités de maintenance, inspection et nettoyage et après avoir mis la machine en sécurité il est obligatoire que l'opérateur utilise des équipements de protection individuelle comme indiqué sur les plaques signalétiques à ajouter dans les différentes sections de la machine.

Voir ci-après, à titre d'exemple, quelques plaques qui pourraient se rendre nécessaires en fonction du type de poudre traitée.

Durante la lavorazione e/o la manutenzione, gli operatori NON sono esposti ad alcuni rischi residui.

In ogni caso sarà cura dell'installatore apporre ulteriori indicazioni e/o cartellonistiche che si potrebbero rendere necessarie in funzione del luogo di installazione della macchina e del materiale trattato.

Durante le attività di manutenzione, ispezione, pulizia, dopo aver messo in sicurezza la macchina, è obbligatorio che l'operatore utilizzi alcuni dispositivi di protezione individuale come indicato da apposite targhe monitorie da aggiungere nelle singole sezioni della macchina.

Di seguito si riportano a titolo esemplificativo alcune targhe che potrebbero rendersi necessarie in funzione del tipo di polvere.

Before carrying out any operation, set the machine in safety status and use suitable personal protection devices.

Vor Arbeiten jeglicher Aret an dem Gerät muss dieses in einen sicheren Zustand versetzt werden und geeignete PSA angelegt werden.

Avant toute intervention mettre la machine en condition de sécurité et utiliser les EPI appropriés.

Prima di qualsiasi intervento mettere in sicurezza la macchina e far uso degli idonei DPI.

SCRAPPING

For scrapping the machine at the end of its life, make sure the plastic parts (seals and components) are collected separately and sent to special centres for disposal.

The other parts meant for recycling must be sent to iron scrap yards.

When dismantling the machine make sure the lifting procedures indicated in the HANDLING section (page M.14) are followed.

For disposal of materials contained in the machine, refer to the existing legislation concerning disposal and the product safety chart.

VERSCHROTTUNG

Bei Verschrottung des Gerätes sind die Teile aus Kunststoff (Dichtungen und Komponenten) auszubauen und vorschriftsmäßig zu entsorgen.

Die restlichen Teile sind beim Scrotthändler abzugeben.

Während des Zerlegens des Gerätes die Anleitungen zum Anheben beachten, die im Teil HANDLING DES GERÄTES auf Seite M.14 nachzulesen sind.

Für die Entsorgung des im Gerät vorhandenen Produkts ist Bezug auf die geltenden Bestimmungen zur Materialentsorgung und die Sicherheitsdatenblätter der Produkte zu nehmen.

DEMANTELEMENT

En cas de démantèlement de la machine, démonter les parties en matières plastique (joints et composants) et les mettre à la décharge dans les déchetteries spécialisées.

Les parties restantes sont destinées à la récupération des matériaux ferreux.

Pendant les phases de démantèlement de la machine respecter les procédures de levage comme indiqué dans la section MANUTENTION (page M.14)

Pour l'élimination de la matière contenue dans la machine, se conformer aux normes en vigueur en matière d'élimination et à la fiche de sécurité du produit.

ROTTAMAZIONE

In caso di rottamazione a fine vita della macchina, aver cura di smontare le parti in materiale plastico (guarnizioni e componenti) e destinarle agli appositi centri di raccolta.

Le restanti parti sono da destinare al recupero dei materiali ferrosi.

Durante le fasi di smantellamento della macchina osservare le procedure di sollevamento come indicato nella sezione MOVIMENTAZIONE (pag. M.14)

Per lo smaltimento del materiale contenuto nella macchina, fare riferimento all norme vigenti in materia di smaltimento ed alla scheda di sicurezza del prodotto.

RETURNING THE MACHINE

To return the machine, fasten to a pallet and cover it with.heat-shrink nylon to protect it from knocks during transport

In any event, make sure the machine does not contain any material residue.

MASCHINENRÜCKGABE

Bei der etwaigen Rückgabe des Geräts ist dieses auf einer Palette zu befestigen und mit Schrumpffolie zu schützen. Auf jeden Fall versuchen, es so weit wie möglich vor etwaigen Stößen beim Transport zu schützen.

Sicherstellen, daß sich keine Materialrückstände im Gerät befinden.

RESTITUTION MACHINE

En cas de restitution de la machine, la fixer sur une palette et la protéger au moyen de Nylon thermorétractable, en essayant de la protéger au mieux contre les chocs éventuels du transport.

Vérifier dans tous les cas qu'il n'y a pas de résidus de matériel dans la machine.

RESO MACCHINA

In caso di reso della macchina fissarla su di un pallet e proteggerla con del nylon termoretraibile , cercando di proteggerla al meglio da eventuali urti derivanti dal trasporto.

In ogni caso assicurarsi che la macchina non abbia residui di materiale.

Minor problems may often be solved without calling a technician.
The most common faults with relevant solutions are given in the Table below.

Kleinere Probleme können oft ohne die Einschaltung eines Fachmanns behoben werden. Hier folgt eine Aufstellung der häufigsten Probleme und deren Abhilfe.

Les problèmes mineurs peuvent être résolus sans consulter un spécialiste. Vous trouverez ci-dessous une liste des inconvénients les plus communs avec les solutions éventuelles.

I problemi minori possono essere risolti senza consultare uno specialista.
Diamo di seguito un elenco degli inconvenienti più comuni con le eventuali soluzioni.

N.	Problem	Cause	Solution
1	Vibrator does not work.	Connection not made.	Check fuses.
		Incorrect voltage.	Correct voltage.
		Vibrator.	Replace faulty parts.
2	Product does not flow down.	Insufficient vibration.	Adjust vibrator size value.
		Outlet is obstructed.	Check extraction system below outlet.
		Valve closed..	Open.
		Vibrator burnt out.	Check; replace the vibrator if necessary.
3	Product under the hopper..	Hatchway seal damaged.t.	Locate cause, then replace if necessary.
		Welded joints are cracked.	Repair welds immediately.
4	Hopper vibrates irregularly.s.	Damper(s) damaged.	Locate, then replace.

N.	Problem	Ursache	Abhilfe
1	Vibrationsmotor funktioniert nicht.	Kein Anschluß..	Sicherungen prüfen..
		Falsche Spannung.	Spannung anpassen.
		Vibrationsmotor defekt.	Defektes Teil ersetzen.
2	Produkt wird nicht gefördert.	Schlechte Vibration.	Unwuchtmassen im Motor ersetzen.
		Verstopfung des Auslaufs.	Austragesystem stromab vom Trichter prüfen.
		Klappe oder Schieber geschlossen.	Klappe oder Schieber öffnen.
		Vibrationsmotor durchgebrannt.	Ursache suchen und Vibrationsmotor ersetzen.
3	Unter Trichter tritt Produkt aus.	Dichtung der Klappe beschädigt.	Ursache suchen und dann ersetzen.
		Risse in der Schweißnaht.	Sofort reparieren.
4	Unregelmäßige Vibrationen des Trichters.	Bruch der Schwingungsdämpfer.	Ursache suchen und ersetzen.

N.	Problème	Cause	Remède
1	Le motovibrateur ne fonctionne pas	Absence de courant..	Contrôler les fusibles.
		Tension erronée.	Adapter la tension.
		Motovibrateur défectueux..	Changer le composant défectueux.
2	Le produit ne descend pas.	Vibration faible.	Régler les masses du motovibrateur.
		Obstruction de la bouche de sortie.	Contrôler le système d'extraction en aval du fond.
		Vanne fermée.	Ouvrir la vanne. .
		Motovibrateur brûlé.	Rechercher la cause puis remplacer le motovibrateur.e.
3	Présence de produit sous la trémie	Joint de trappe endommagé.	Rechercher la cause puis le remplacer.
		Présence de criques dans les soudurese	Réparer immédiatement.
4	Vibration décomposée de la trémie.	Rupture d'un anti-vibrant..	Rechercher la cause et le remplacer.

N.	Problema	Causa	Soluzione
1	Il motovibratore non funziona.	Manca il collegamento.	Controllare fusibili.
		Tensione errata.	Adeguare la tensione.
		Motovibratore difettoso.	Sostituire il componente difettoso.
2	Il prodotto non scende.	Vibrazione scarsa.	Regolare masse motovibratore.
		Ostruzione della bocca di scarico.	Controllare sistema di estrazione a valle del fondo
		Valvola o serranda chiusa.	Aprire la valvola o serranda.
		Motovibratore bruciato.	Indagare il motivo poi sostituire il motovibratore.
3	Presenza prodotto sotto la tramoggia.	Guarnizione boccaporto danneggiata.	Scoprire il motivo e poi sostituirla.
		Presenza di cricche nelle saldature	Riparare immediatamente.
4	Vibrazione scomposta della tramoggia.	Rottura di un antivibrante/i.	Scoprire il motivo e sostituirlo/i.

WAMGROUP

The manufacturer:

WAMGROUP S.p.A.

located in

Strada degli Schiocchi, 12 - I-41100 Modena (Mo) - Italy

under its own responsibility declares that:

SBB

Declaration Of Incorporation Of Partly Completed Machinery Annex II B 2006/42/CE Directive

comply with the RES Directive 2006/42/EC
of the European Parliament and the Council of 17 May 2006 on machinery

1.1.1. - Definitions
1.1.2. - Principles of safety integration
1.1.3. - Materials and products
1.1.5. - Design of machinery to facilitate its handling
1.3.1. - Risk of loss of stability
1.3.2. - Risk of break-up during operation
1.3.3. - Risks due to falling or ejected objects
1.3.4. - Risks due to surfaces, edges or angles
1.3.7. - Risks related to moving parts
1.3.8. - Choice of protection against risks arising from moving parts
1.3.9. - Risks of uncontrolled movements
1.5.4. - Errors of fitting
1.5.5. - Extreme temperatures
1.5.6. - Fire
1.5.7. - Explosion
1.5.8. - Noise
1.5.9. - Vibrations
1.5.13. - Emissions of hazardous materials and substances
1.5.15. - Risk of slipping, tripping or falling
1.6.1. - Machinery maintenance
1.6.2. - Access to operating positions and servicing points
1.6.4. - Operator intervention
1.6.5. - Cleaning of internal parts
1.7.1. - Information and warnings on the machinery
1.7.2. - Warning of residual risks
1.7.4. - Instructions

and, where applicable, the requirements imposed by the following EC Directives
Directive 2004/108/EC of the European Parliament and the Council of 15 December 2004 on the approximation of the laws of the Member States relating to electromagnetic compatibility.
Directive 2006/95/EC of the European Parliament and the Council of 12 December 2006 on the approximation of the laws of the Member States relating to electrical equipment designed for use within certain voltage limits.

The relevant technical documentation is compiled in accordance with Annex VII B of the Machinery Directive 2006/42/EC
Harmonized standards, national standards and technical regulations in question:
EN ISO 12100-1: 2005 EN ISO 12100-2: 2005

The signing company is committed to provide, in response to a reasoned request by national authorities, relevant information on products covered by this declaration, without prejudice to the rights of intellectual property of the manufacturer. The information will be transmitted directly to the national authorities having requested.

It's forbidden to operate all these products before the machine, in which they will be installed, is declared in conformity with 2006/42/EEC AND SUBSEQUENT AMENDMENTS

erklärt unter eigener Verantwortung wie folgt:

SBB

EINBAUERKLÄRUNG für unvollständige Maschinen gem. Anhang II B der MRL 2006/42/EG

Diese Produkte entsprechen den Anforderungen der Maschinenrichtlinie 2006/42/EG
des europäischen Parlamentes und des Rates vom 17. Mai 2006

1.1.1. - Begriffsbestimmungen
1.1.2. - Grundsätze für die Integration der Sicherheit
1.1.3. - Materialien und Produkte
1.1.5. - Konstruktion der Maschine im Hinblick auf die Hanhabung
1.3.1. - Risiko des Verlustes der Standsicherheit
1.3.2. - Bruchrisiko beim Betrieb
1.3.3. - Risiken durch herabfallende oder herausgeschleuderte Gegenstände
1.3.4. - Risiken durch Oberflächen, Kanten und Ecken
1.3.7. - Risiken durch bewegliche Teile
1.3.8. - Wahl der Schutzeinrichtungen gegen Risiken durch bewegliche Teile
1.3.9. - Risiko unkontrollierter Bewegungen
1.5.4. - Montagefehler
1.5.5. - Extreme Temperaturen
1.5.6. - Brand
1.5.7. - Explosion
1.5.8. - Lärm
1.5.9. - Vibrationen
1.5.13. - Emission gefährlicher Werkstoffe und Substanzen
1.5.15. - Ausrutsch-, Stolper- und Sturzrisiko
1.6.1. - Wartung der Maschine
1.6.2. - Zugang zu den Bedienungsständen und den Eingriffspunkten für die Instandhaltung
1.6.4. - Eingriffe des Bedienungspersonals
1.6.5. - Reinigen innen liegender Maschinenteile
1.7.1. - Informationen und Warnhinweise an der Maschine
1.7.2. - Warnung vor Restrisiken
1.7.4. - Betriebsanleitung

Wo anwendbar wurden die Anforderungen folgender EG Richtlinien erfüllt
Richtlinie 2004/108/EG des Europäischen Parlaments und des Rates vom 15. Dezember 2004 zur Angleichung der Rechtsvorschriften der Mitgliedstaaten über die elektromagnetische Verträglichkeit.
Richtlinie 2006/95/EG des Europäischen Parlaments und des Rates vom 12. Dezember 2006 zur Angleichung der Rechtsvorschriften der Mitgliedstaaten betreffend elektrische Betriebsmittel zur Verwendung innerhalb bestimmter Spannungsgrenzen.

Die speziellen technischen Unterlagen gem. Anhang VII B der MRL 2006/42/EG wurden erstellt.
Folgende harmonisierte Normen, nationale Normen und technische Vorschriften fanden Anwendung:
EN ISO 12100-1: 2005 EN ISO 12100-2: 2005

Das ausstellende Unternehmen ist verpflichtet, die technischen Unterlagen für diese Produkte auf begründetes Verlangen den Marktaufsichtsbehörden, unbeschadet der Rechte am geistigen Eigentum des Herstellers, zur Verfügung zu stellen. Die Unterlagen werden direkt an die anfordernde Behörde gesandt.

Es ist verboten diese Produkte in Betrieb zu nehmen, bevor die Maschine, in welche diese eingebaut werden, den Anforderungen der MRL entspricht und die EG Konformitätserklärung gem. MRL 2006/42/EG und nachfolgenden Änderungen vorliegt.

dichiara sotto la propria responsabilità che:

le quasi macchine serie SBB

ai sensi dell'Allegato II B della Direttiva Macchine 2006/42/CE (DICHIARAZIONE DI INCORPORAZIONE)

risultano conformi ai RES della Direttiva 2006/42/CE
del Parlamento Europeo e del Consiglio del 17 maggio 2006 relativa alle macchine

1.1.1. - Definizioni
1.1.2. - Principi di integrazione della sicurezza
1.1.3. - Materiali e prodotti
1.1.5. - Progettazione della macchina ai fini della movimentazione
1.3.1. - Rischio di perdita di stabilità
1.3.2. - Rischio di rottura durante il funzionamento
1.3.3. - Rischi dovuti alla caduta o alla proiezione di oggetti
1.3.4. - Rischi dovuti a superfici, spigoli ed angoli
1.3.7. - Rischi dovuti agli elementi mobili
1.3.8. - Scelta di una protezione contro i rischi dovuti agli elementi mobili
1.3.9. - Rischi di movimenti incontrollati
1.5.4. - Errori di montaggio
1.5.5. - Temperature estreme
1.5.6. - Incendio
1.5.7. - Esplosione
1.5.8. - Rumore
1.5.9. - Vibrazioni
1.5.13. - Emissioni di materie e sostanze pericolose
1.5.15. - Rischio di scivolamento, inciampo o caduta
1.6.1. - Manutenzione della macchina
1.6.2. - Accesso ai posti di lavoro e ai punti d'intervento utilizzati per la manutenzione
1.6.4. - Intervento dell'operatore
1.6.5. - Pulitura delle parti interne
1.7.1. - Informazioni e avvertenze sulla macchina
1.7.2. - Avvertenze in merito ai rischi residui
1.7.4. - Istruzioni

e, qualora applicabili, alle esigenze imposte dalle seguenti Direttive Comunitarie
Direttiva 2004/108/CE del Parlamento Europeo e del Consiglio del 15 dicembre 2004 concernente il riavvicinamento delle legislazioni degli Stati membri relative alla compatibilità elettromagnetica.
Direttiva 2006/95/CE del Parlamento Europeo e del Consiglio del 12 dicembre 2006 concernente il riavvicinamento delle legislazioni degli Stati membri relative al materiale elettrico destinato ad essere adoperato entro taluni limiti di tensione.

La documentazione tecnica pertinente è stata compilata in conformità dell'Allegato VII B della Direttiva Macchine 2006/42/CE
Norme armonizzate, norme nazionali e regole tecniche considerate:
UNI EN ISO 12100-1: 2005 UNI EN ISO 12100-2: 2005

L'azienda firmataria della presente si impegna a trasmettere, in risposta a una richiesta adeguatamente motivata delle autorità nazionali, informazioni pertinenti sui prodotti oggetto della presente dichiarazione, fatti salvi i diritti di proprietà intellettuale del fabbricante. Le informazioni verranno trasmesse direttamente all'autorità nazionale che le ha richieste.

AVVERTENZA IMPORTANTE. E' vietato mettere in servizio la quasi macchina oggetto della presente dichiarazione finché la macchina finale in cui deve essere incorporata non è stata dichiarata conforme, se del caso, alle disposizioni della Direttiva Macchine 2006/42/CE.

WAM®

All the products described in this catalogue are manufactured according to **WAMGROUP S.p.A. Quality System procedures**. The Company's Quality System, certified in July 1994 according to International Standards **UNI EN ISO 9002** and extended to the latest release of **UNI EN ISO 9001**, ensures that the entire production process, starting from the processing of the order to the technical service after delivery, is carried out in a controlled manner that guarantees the quality standard of the product.

*Alle in diesem Katalog beschriebenen Produkte werden gemäß dem **Qualitätssystem der WAMGROUP S.p.A.** hergestellt. Das im Juli 1994 gemäß der internationalen Norm **UNI EN ISO 9002** und auf die neueste Version der **UNI EN ISO 9001** erweiterte, zertifizierte Qualitätssystem der Firma gewährleistet, dass der gesamte Produktionsprozess von der Auftragsbearbeitung bis zum technischen Kundendienst nach Lieferung in kontrollierter Art und Weise erfolgt, so dass der Qualitätsstandard des Produkts gewährleistet ist.*

Tous les produits décrits dans ce catalogue sont fabriqués selon les procédures du **Système de Qualité de WAMGROUP S.p.A.**, certifié en Juillet 1994 selon les normes internationales **UNI EN ISO 9002** et étendu à la dernière version de la norme **UNI EN ISO 9001**. Cela garantit que le processus de production, à partir de la gestion de la commande au service technique après-vente, est effectué de manière contrôlée garantissant la norme de qualité du produit.

*Tutti i prodotti descritti nel catalogo sono stati realizzati secondo le **procedure del Sistema Qualità di WAMGROUP S.p.A.** Il Sistema Qualità aziendale, certificato dal luglio 1994 in conformità alle normative internazionali **UNI EN ISO 9002** e successivamente esteso all' ultima versione delle normative **UNI EN ISO 9001**, garantisce che l'intero processo produttivo, dalla formulazione dell'ordine fino all'assistenza tecnica dopo la consegna, si svolga secondo modalità controllate che garantiscono lo standard qualitativo del prodotto.*

PROCEDURE FOR PARTS REPLACEMENT	AUSTAUSCH VON ERSATZ-TEILEN	PROCÉDURES POUR LE REMPLACEMENT DES PIÈCES DETACHEES	PROCEDURA PER LA SOSTITUZIONE DELLE PARTI DI RI-CAMBIO
ITEM 6 **REPLACING SEAL** - Disconnect power supply to the panel and terminal board. - Unscrew the screws blocking the seal to the underlying hopper. - Remove the seal and replace it. - Restore the power supply connections.	**POS. 6** **AUSTAUSCH DER DICHTUNG** - Den elektrischen Anschluß am Schaltkasten und der Klemmenleiste abtrennen. - Die Schrauben lösen, welche die Dichtung am unteren Trichter befestigen. - Die Dichtung entfernen und ersetzen. - Die elektrischen Anschlüsse wieder herstellen.	**POS. 6** **REMPLACEMENT DU JOINT** - Débrancher le raccordement électrique au tableau et au bornier. - Dévisser les vis de serrage qui bloquent le joint à la trémie inférieure. - Enlever et changer le joint. - Rétablir les raccordements électriques.	**POS. 6** **SOSTITUZIONE GUARNIZIONE** - Disconnettere l' allacciamento elettrico al quadro e alla morsettiera. - Svitare le viti di serraggio che bloccano la guarnizione alla tramoggia inferiore. - Rimuovere e sostituire la guarnizione. - Ripristinare i collegamenti elettrici.
ITEM 3 **REPLACING DAMPERS** - Disconnect power supply to the motor and panel. - Harness the hopper and support it using suitable lifting equipment that will keep it balanced. - Unscrew the four fixing screws which fix the dampers to the supporting frame. - Remove the dampers and replace them. - Repeat the operations in reverse order. - Restore the electrical connections.	**POS. 3** **ERSETZEN DER SCHWINGUNGSDÄMPFER** - Den elektrischen Anschluß am Motor und am Schaltkasten unterbrechen. - Den Trichter anschlagen und mit einem geeigneten Hebezeug im Gleichgewicht halten. - Die vier Schrauben lösen, mit denen die Schwingungsdämpfer an den Gestellträgern befestigt sind. - Die Schwingungsdämpfer entfernen und ersetzen. - Zusammenbau in umgekehrter Reihenfolge vornehmen. - Die elektrischen Anschlüsse wieder herstellen.	**POS. 3** **REMPLACEMENT DES SILENTBLOCS** - Débrancher le raccordement électrique au moteur et au tableau. - Elinguer la trémie et la soutenir avec un moyen de levage approprié pour la maintenir en équilibre. - Dévisser les quatre vis de serrage qui bloquent les silentblocs aux supports du châssis. - Enlever et changer les silentblocs. - Exécuter les opérations dans l'ordre inverse. - Rétablir les raccordements électriques.	**POS. 3** **SOSTITUZIONE ANTIVIBRANTI** - Disconnettere l' allacciamento elettrico al motore e al quadro. - Imbragare la tramoggia e sostenerla con mezzo di sollevamento idoneo in modo da tenerla in equilibrio. - Svitare le quattro viti di serraggio che bloccano gli antivibranti ai sostegni del telaio. - Rimuovere e sostituire gli antivibranti. - Eseguire le operazioni in senso inverso. - Ripristinare i collegamenti elettrici.
ITEM 4 **REPLACING FILTER BAG** - Slacken the locking clamp - Remove the filter bag and replace it. - Refit the clamp.	**POS. 4** **AUSTAUSCH DES FILTERSCHLAUCHS** - Die Befestigungsschelle lösen. - Den Filterschlauch entfernen und ersetzen. - Die Befestigungsschelle wieder anschrauben.	**POS. 4** **REMPLACEMENT DU MANCHON FILTRANT** - Dévisser le collier de blocage. - Enlever et remplacer le manchon filtrant. - Revisser le collier.	**POS. 4** **SOSTITUZIONE MANICA FILTRANTE** - Svitare la fascetta di bloccag-gio. - Rimuovere e sostituire la manica filtrante. - Riavvitare la fascetta.
ITEM 5 **REPLACING VIBRATOR** - Disconnect power supply to the terminal board and panel - Remove the fixing bolts. - Remove the vibrator safety cable. - Install the new vibrator. - Refit the safety cable. - Restore the electrical connections.	**POS. 5** **AUSTAUSCH DES SCHWINGUNGSDÄMPFERS** - Den elektrischen Anschluß an der Klemmenleiste und dem Schaltkasten unterbrechen. - Die Befestigungsschrauben entfernen. - Das Sicherheitskabel des Schwingungsdämpfers entfernen. - Den neuen Schwingungsdämpfer einbauen. - Das Sicherheitskabel wieder befestigen. - Elektrische Anschlüsse vornehmen.	**POS. 5** **REMPLACEMENT DU VIBRATEUR** - Débrancher le raccordement électrique du bornier et du tableau. - Enlever les boulons de fixation. - Enlever le câble de sécurité du vibrateur. - Installer le nouveau vibrateur. - Remettre le câble de sécurité. - Rétablir les raccordements électriques.	**POS. 5** **SOSTITUZIONE VIBRATORE** - Disconnettere l' allacciamento elettrico alla morsettiera e al quadro - Togliere i bulloni di fissaggio. - Togliere il cavo di sicurezza del vibratore. - Installare il nuovo vibratore. - Reinserire il cavo di sicurezza. - Ripristinare i collegamenti elettrici.

WAMGROUP®

WAM®

All the products described in this catalogue are manufactured according to **WAMGROUP S.p.A. Quality System procedures**. The Company's Quality System, certified in July 1994 according to International Standards **UNI EN ISO 9002** and extended to the latest release of **UNI EN ISO 9001**, ensures that the entire production process, starting from the processing of the order to the technical service after delivery, is carried out in a controlled manner that guarantees the quality standard of the product.

This publication cancels and replaces any previous edition and revision.
We reserve the right to implement modifications without notice.
This catalogue cannot be reproduced, even partially, without prior written consent by the Manufacturer.

1.1 Scope of the Manual

This Manual has been prepared by the Manufacturer to provide the operating technical information for installation, operation and maintenance of the valve concerned.

The Manual, which is an integral part of the valve concerned, must be preserved throughout the life of the valve in a known easily accessible place, available for consultation whenever required.

If the Manual is lost, damaged or becomes illegible, contact the Manufacturer for a copy specifying the serial number of the valve.

If the valve concerned changes ownership, the Manual has to be handed over to the new owner as part of the valve supply.

The Manual is meant for specialist technical personnel appointed and authorized by the Manufacturer, owner and installer to act on the valve concerned for which specific technical skills in the sector concerned are necessary (electrical, mechanical, etc.).

The illustrations may differ from the actual structure of the valve concerned but do not interfere with the explanation of the operations.
In case of doubt, contact the Manufacturer for explanations.

The Manufacturer reserves the right to make changes to the Manual without the obligation to provide prior notification, except in case of modifications concerning the safety level.

The technical information included in this Instruction Manual is the property of the Manufacturer and therefore has to be considered as confidential.

It is forbidden to use the Manual for purposes other than those strictly linked to the operation and maintenance of the valve concerned.

This information is provided by the Manufacturer in the original language (English) and can be translated into other languages to satisfy legislative and/or commercial requirements.

1.2 Symbols

To highlight certain parts of the text, for purposes of safety, or to indicate important information, certain symbols are used, the meaning of which is described below.

It is important to comply with and scrupulously follow the information highlighted by the symbols.

Danger - Warning

Indicates situations of serious danger which, if ignored, can be risky for the health and safety of persons.

Caution

Indicates that appropriate behaviour must be adopted to avoid posing risk for the health and safety of persons and avoid causing economic damage.

Important

Indicates particularly important technical information which must not be ignored.

List of safety and information symbols

Symbol representation	Symbol description
	Danger sign: indicates danger of electric shock caused by the presence of powered components inside the junction box or control panel.
	Obligation: read this Manual before carrying out any action on the valve concerned.
	Forbidden: indicates that it is forbidden to lubricate or adjust moving parts.
	Danger: indicates danger of serious injury to limbs if the internal moving parts of the valve are exposed. Before carrying out inspection operations, isolate the valve concerned from the electrical energy sources.
	Information: indicates the direction of rotation of the electric motor.
	Obligation: indicates the hooking points for lifting of the valve concerned.
	Forbidden: indicates it is forbidden to introduce hands into the valve.

1.3 Glossary and terminology

Operator: person appropriately trained and authorized by the Production Manager for setting up the valve concerned and carrying out routine maintenance.

Installer: organization with specialized technicians and appropriate equipment for carrying out risk-free installation and extraordinary maintenance.

Specialist technician: person responsible for and authorized by the Manufacturer, owner or installer to act on the valve; must have specific technical skills depending on the sector concerned (electrical, mechanical etc.). The specialist technician, in addition to being familiar with the working of the valve concerned, must be familiar with the working of the plant or equipment on which the valve concerned is installed.

Routine maintenance: includes all the actions necessary to keep the valve in good working conditions, to ensure greater operating durability and to keep the safety requisites constant.

Extraordinary maintenance: all the actions meant to keep the valve in perfect working order.

Setting in safety conditions: all the precautions the authorized personnel must adopt before acting on the valve concerned.

The precautions are listed below.

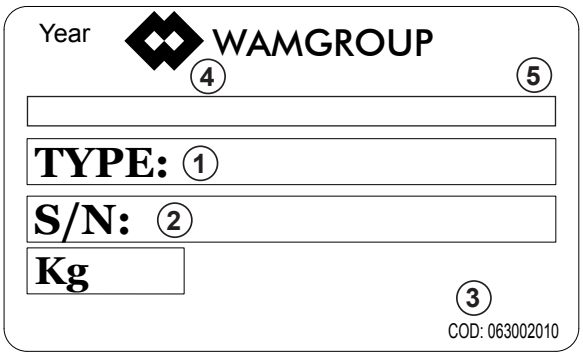
- **Ensure that the valve concerned is disconnected from all the mains and appropriate devices are used to prevent these from being reconnected accidentally.**
- **Ensure that all the moving parts of the valve have come to a complete stop.**
- **Ensure the temperature of the valve concerned is such that it does not burn.**
- **Provide appropriate lighting in the area around the operations.**
- **Wait for the material to be handled inside the valve concerned to settle down completely.**

1.4 Manufacturer's data and identification of the valve

Important

Do not change the data on the identification plate.
Keep the ID plates clean, intact and legible as regards the data they contain.
If the ID plate is damaged or is no longer legible (even just one informative element on it) contact the Manufacturer for a new ID plate and replace it.

The ID plates shown identify the valve concerned and its main components.
The plates show the reference necessary for operating safety.



1) Type of valve
2) Serial No.
3) Label code
4) Manufacturer's logo
5) Manufacturer's name and address

1.5 Request for assistance

For all technical assistance, contact the Manufacturer's service network.
For all requests, provide the valve identification data, the type of problem encountered and all other information which could be useful for identifying the problem.

1.6 Warranty

The conditions for validity and applicability of the warranty are specified in the sales contract.

1.7 Exclusion of responsibility

The valve is delivered according to the specifications indicated by the Buyer in the order and the conditions valid at the time of purchase.

The Manufacturer shall not accept responsibility for safety of persons or objects and operation failure of the valve if the loading/unloading operations from trucks, transport, positioning at the site, use, repairs, maintenance etc. have not been carried out in compliance with the warnings described in this Manual, and in accordance with the national legislation in force.

Likewise, the Manufacturer shall not accept any responsibility if the valve concerned is used:
- improperly;
- by unauthorized persons and/or persons not sufficiently trained for installation, operation and maintenance;
- with modifications made to the original configuration without the Manufacturer's permission;
- with spare parts that are not original or are not specific for the model;
- without maintenance;
- non-pursuant to the regulatory standards and national or local legislation on the matter of occupational safety;
- non-pursuant to the recommendations in this Manual or on the warning and danger plates applied on the valve.

2.1 General safety prescriptions

Read the Instruction Manual carefully and strictly follow the instructions it includes, especially those regarding safety.

Most accidents at the workplace are caused by negligence, failure to follow the most elementary safety regulations and incorrect or improper use of tools and equipment.

Accidents can be prevented and avoided by taking due care, using suitable equipment and adopting adequate preventive measures.

Apply and comply with the standards in force regarding workplace hygiene and safety.

The personnel trained for and authorized for the operations has to have the psychological/physical requisites, experience in the sector concerned and the necessary technical skills for carrying out the operations assigned to them.

All workers involved in any kind of operation must be prepared, trained and informed as regards the risks and the behaviour to be adopted.

Pay attention to the meaning of the notices applied on the valve, keep these legible and respect the information indicated.

Use instruments, equipment and tools that have been approved and are intrinsically safe, and cannot alter the safety level of the operations or damage the valve during installation, use and maintenance.

Modifications to the valve components should not be made for any reason whatsoever, without the Manufacturer's permission.

2.2 Safety prescriptions for transport and handling

Carry out all the handling and transport operations in accordance with the procedures and instructions shown on the packaging and in the Manual supplied.

All the operations must be performed by qualified authorized personnel.

Those authorized to carry out the handling operations must have the capabilities and experience required to adopt all the necessary measures to guarantee one's safety and the safety of persons directly involved in the operations.

The chosen features of the lifting and handling means (crane, bridge crane, forklift truck etc.) must take into account the weight to be handled, the dimensions and the gripping points.

During lifting use only accessories such as eyebolts, hooks, shackles, spring hooks, belts, slings, chains, ropes etc., that have been certified and are suitable for the weight to be lifted.

During handling respect the prescriptions applicable for handling loads.

Keep the position of the valve concerned and the loose components horizontal, keep the load low and make all the necessary movements gently.

Avoid sudden manoeuvres, dangerous oscillations and rotations, accompanying the movements manually and place the load gently on the ground.

2.3 Safety prescriptions for installation

Before starting with installation, a "Safety Plan" must be implemented to safeguard the personnel directly involved and those who carry out operations in the surrounding area.

All the laws must be strictly applied, especially those concerning workplace safety.

Before proceeding with installation operations, mark off the work area to prevent access by unauthorized persons.

The electrical connections must be made in compliance with the standards and laws in force.

The person in charge of making the electrical connections has to ensure that the required standards and laws are respected before testing.

2.4 Safety prescriptions for use and operation

Do not tamper with the valve concerned by using any kind of device to obtain performances different from those designed.
All unauthorized changes can affect the health of people and the integrity of the valve.

The operators have to exclusively wear protective clothing and have to be equipped with appropriate individual protection devices for carrying out the operations and as required by the safety and work accident prevention standards.

Before use, ensure that all the safety devices are installed and that they are working properly.

During operations, prevent access to the work area by unauthorized persons.

Remove all obstacles or sources of danger from the work area.

It is strictly forbidden placing any improper load on the valve.

2.5 Safety prescriptions for maintenance and replacement of components

Danger - Warning

Before carrying out any operation on the valve concerned, ensure it is switched off and disconnected from all mains and use suitable devices to prevent the possibility of the power sources being activated accidentally.

Maintain the valve concerned in the conditions of utmost efficiency compliant with the maintenance plan provided by the Manufacturer.

Good maintenance apart from preserving the functional features and essential safety features over time, will also allow extending the working life of the valve concerned and achieving the best possible performance.

Strictly follow the procedures indicated in the Manual, especially those concerning safety.

Ensure that all the safety devices are active and working properly.
Mark off the work area in such a manner as to prevent the access of unauthorized persons.

Replace the worn and damaged components exclusively with original spare parts, whose safety, reliability and interchangeability have been undoubtedly established.

Apart from invalidation of the warranty, the Manufacturer declines all responsibility for damage to objects and harm to persons deriving from the use of non-original spare parts or due to modifications made during repairs without express written authorization.

Use the oil and lubricants recommended by the Manufacturer.

Do not dump polluting material (oil, grease, paint, plastic etc.) in the environment, but carry out waste separation disposal depending on the chemical composition of the various products in compliance with the legislation in force.

On completion of maintenance or replacement operations, before resuming production, check that no foreign bodies (rags, tools etc.) have been left inside the valve concerned.

3.1 General description of the valve

VIB Slides Valves are used in all types of bulk solids processing plants where interception of gravity-fed or conveyed dry powders or granules is required. **VIB** Slide Valves may be fitted beneath hoppers, bins, silos, outlet, on inlets and outlets of mechanical conveyors, as well as on the inlet of telescopic loading spouts. Due to their special design and to the engineering materials used, they represent a particularly economic yet most efficient solution.

VIB Slide Valves consist of two high-pressure die-cast semi-bodies manufactured from aluminium alloy, a sliding blade in carbon or stainless steel, a carbon or stainless steel frame and a pre-stressed elastomeric seal in WAM's **SINT**® engineering polymer composite.

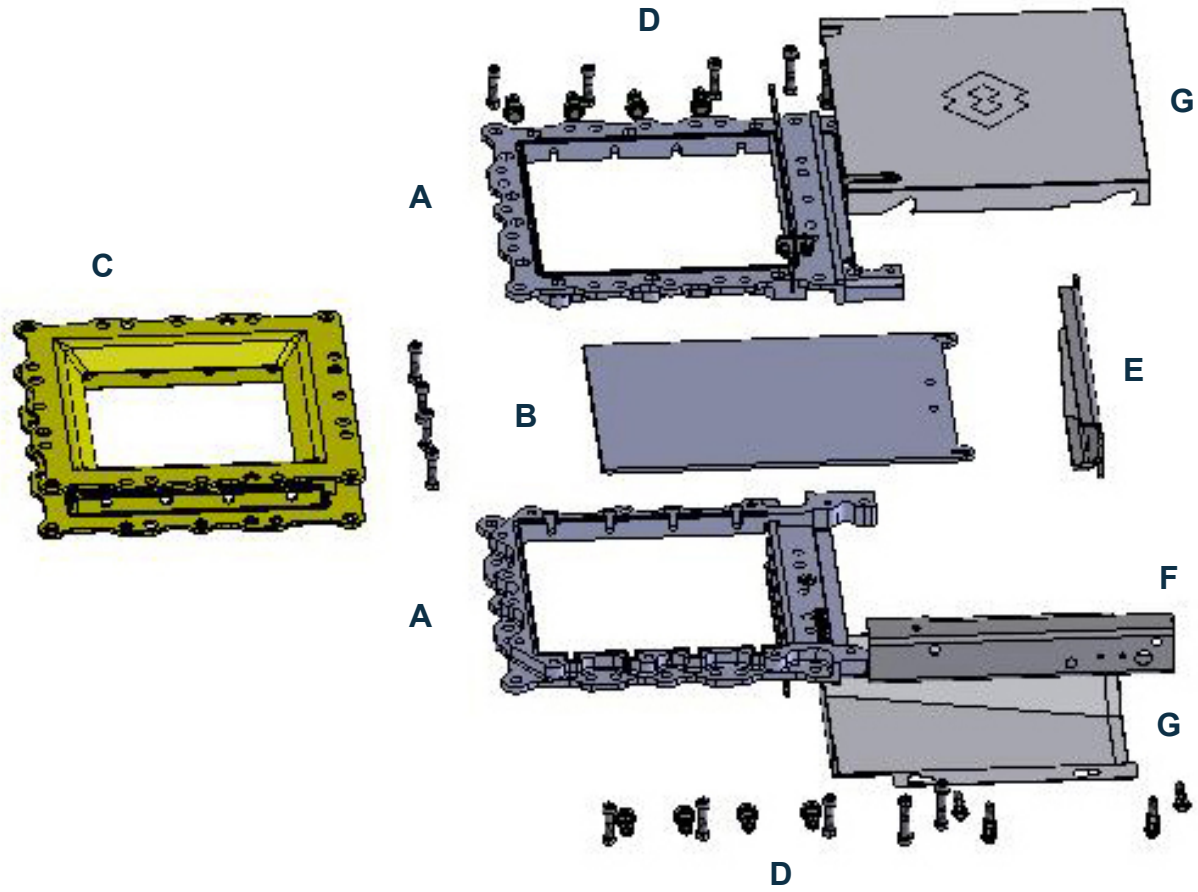
The special geometry of new "Slim" **VIB** Slide Valves and the various options in blade design enable their application in virtually all industries including Food processing. For the food industry it is available a version with stainless steel blade and frame and FOOD approved seal is available.

VIB Slide Valves are available in a variety of configurations: **VIBQ** version comes with a square inlet, in the **VIBC** version with a circular open cross section**. VIB** valves can be fitted with a manual, pneumatic or geared motor actuator. All actuator systems are interchangeable (see ACTUATOR catalogue).

Important

The terms "equipment" and "valve" used in this manual refer to the same machine.
As components meant for installation in a plant, the valves - not fully provided with safety means - have to be considered "partly completed machinery". Therefore, they do not bear an EC marking.
It is forbidden to start the valve unless the machine/plant in which it is to be installed has been declared compliant with the Directive 2006/42/EC and further modifications.

3.2 Main components



A) Die cast aluminium semi-bodies
B) Blade
C) SINT® liner
D) Roller bearing
E) Actuator fixing plate
F) Back lateral frame
G) Protection plate

3.3 Operating principle

The VIB is a valve that opens by lifting a round or polygonal gate/wedge out of the material flow path from the equipment upstream.

3.4 Permitted use

The **VIB** valves can be used in discontinuous operation for interception of handling powders flakes, pellet or granular material.

The **VIB** slide valve is designed for applications in which interception of gravity-fed or pneumatically conveyed dry powders or granules is required.

The **VIB** slide valves can only be used with maximum internal pressure or negative pressure according to the technical specification.

The **VIB** slide valves made from aluminium alloy are not designed to bear the weight of equipment installed below (e.g. screw feeders, belt conveyors, vibratory feeders etc.)

The **VIB** slide valves must be closed only by the moving product column.

Every other use must be considered as improper and therefore not permitted.

The **VIB** slide valves food version (model F), compliant to EU 1935/2004, are suitable for application with E-simulant, max. temperature of 80 °C and 3 days constant in-contact time.

3.5 Improper use not permitted

It is forbidden to start operating the slide valve until the plant or equipment in which it is to be incorporated has been declared as compliant to the relevant national and local legislative provisions in force.

It is forbidden to use the slide valve in potentially inflammable or explosive atmospheres (ATEX) unless they are indicated on the certification enclosed.

It is forbidden to use the slide valve for granular materials (stones, sand, gravel, etc.) grater than 20mm in the bigger dimension.

It is forbidden to use the slide valve unless the seals are intact.

It is forbidden to use the slide valve as a support even if it is not running. Apart from falling, there is risk of damaging to the valve.

It is forbidden to operate the valve in the absence of material.

It is forbidden to wet the valve with water or grease it.

It is forbidden to insert any type of gasket between the silo flange and the upper flange of the slide valve!

Do not use the valve in the absence of the safety guards.

It is forbidden to use the slide valve for materials which can cause radioactive contamination.

It is forbidden to close the slide valve when material flow is stopped.

The **VIB** valves are not suitable for applications with liquids or with pressure values different from atmospheric pressure.

It is forbidden using the seal adjustment in the absence of wear or leakage problems.

It is forbidden washing / cleaning the valve using high pressure devices.

It is forbidden to use the slide valve for hot materials with temperatures exceeding 60°C and cold materials with temperatures below - 20°C.

It is forbidden to disassemble the valve or its components if material is present upstream the valve.

It is forbidden using the hammer on the aluminium valve body.

VIB - type Slide Valves are dust proof but they are NOT pressure proof.

NOTE: Depending on the type of plant, the valve can be operated either manually, electropneumatically or by a gear motor. In the two latter versions the valve is controlled by a remote control panel or by a local starter.

The weight of the material column must not exceed the resistance of the mobile valve parts.

Materials with bulk density < 1.3 t/m³ normally do not create any problem. When dealing with materials with higher bulk density check with WAMGROUP customer service.

3.6 Noise level

The noise level of the **VIB** valve operating on empty does not exceed 50 dB(A), the value measured at a distance of 1m, in the most unfavourable position.

This may vary according to the type of material handled and the type of actuator applied.

Danger - Warning

Depending on the installation site, the installer must adopt suitable systems (barriers, etc.), if necessary, to maintain the noise levels within the legally permitted limits.

3.7 Environmental operating limits

Unless otherwise specified, the valve concerned may be used only within the limits indicated.

- Altitude: less than 1,000 m at sea level
- Environmental temperature: between - 20 °C and + 40 °C

Maximum temperature of dusts: +80 °C continuous, +90 °C for short time intervals (maximum of 1 minute).

These temperature limits are linked to the features of the gaskets and plastic coatings; if their efficiency is affected by extremely high temperatures, it leads to loss of material and formation of potentially explosive hazardous mixtures.

- Cold climates: with temperature less than 5 °C use oil and lubricants suitable to the operating temperature.

3.8 Overall dimensions and technical features

For the exact identification of the valve concerned, see the identification plate.

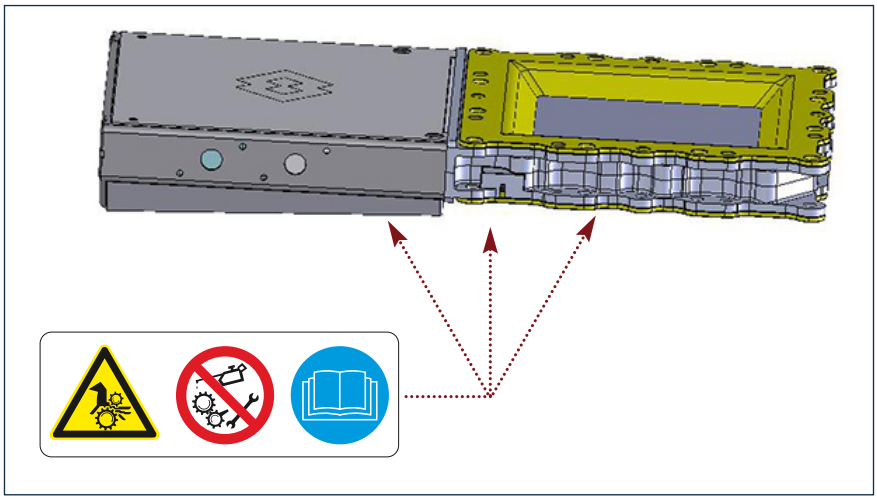
The shipping document shows the dimension of the slide valve in addition to the serial number and identification codes.

Information regarding the technical features of the **VIB** slide valves, such as dimension, seal and blade characteristics is given in Chapter 10.

3.9 Safety and information signs

Danger - Warning

Follow the signs on the plates.
The plates have to be readable; if they are not, clean them, replace the damaged ones and place them in their original position.



NB: See page 2, **1.2 Symbols**

3.10 Safety devices

The access to the internal parts of the valve is not necessary during operation.

Extraordinary access is necessary for removing foreign bodies and material residues inside the valve or for extraordinary maintenance.

For accident prevention it is essential to keep the valve out of personnel reach during operation. To this purpose, the customer has to provide suitable safety devices such as grids, as well as protective inlet and outlet joints (either robust flexible sleeves or rigid pipe unions). However, the installer has to avoid that, even accidentally, a person remains harmed (by employing suitable hopper, safety grilles,...).

When using movable safety devices, provide protection limit switches, which stop the valve instantaneously if the protection is opened or removed. Re-starting of the valve operation must only be possible when the protection is effective again (according to EN 1088 or regulation in force).

4.1 Type of packaging

The type of packaging is selected according to the type of valve supplied, the transport means used, the quantity of goods shipped and the destination.

To facilitate shipment, the valves may be divided into separate packages that are suitably protected. Nuts and bolts and gaskets necessary for the correct assembly are not included and supplied together with the valves.

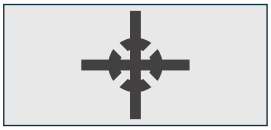
The packages can be loaded separately on the vehicle or fixed to a pallet, protected properly, or inside a container for shipment to a far destination or for sea or air transportation.

The signs for safe lifting and handling are shown on all the packages.

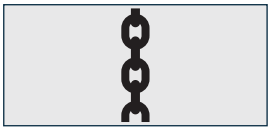
The list bellow provides the description and symbols envisaged on the packaging.

A) Fragile: indicates that the package must be handled and lifted carefully to avoid damage.

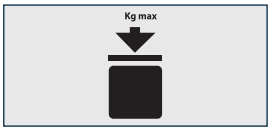
B) Centre of gravity: indicates the position of the centre of gravity of the package.



C) Harness: indicates the correct position of the harness for lifting the package.



D) Stacking limit: indicates the maximum stacking load of the packages.



E) Weight: indicates the maximum weight of the package.

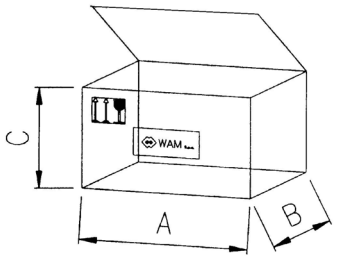
The packaging material has to be disposed off or recycled in compliance with the standards in force.

The data given below do not include any additional packaging (such as pallets or similar).

Valve	Weight (kg)					
	Nominal width					
	150	200	250	300	350	400
VIB	10	14	17	24	34	41

Single packing included

The illustration shows the type and dimensions of mostly used packaging for truck, sea or air shipping.



Valve	Nominal width																	
	150			200			250			300			350			400		
	A	B	C	A	B	C	A	B	C	A	B	C	A	B	C	A	B	C
VIB	515	305	140	615	350	135	715	390	135	845	465	135	965	525	160	1060	565	160

The valves for food applications (model F and P) with the related instructions for cleaning and sanitization, shall be provided individually packed in plastic bags inside the cardboard box.

4.2 Reception of goods

On receiving the goods, ensure that the type and quantity correspond to the data present on the acknowledgement of order.

Possible damage has to be immediately communicated in writing in the space provided to this purpose in the waybill.

The carrier is obliged to accept the complaint and leave the Customer a copy of the waybill.

If the supply is “free destination” a copy of the waybill and of the complaint shall be sent to the Manufacturer or to the forwarder.

If the damages are not claimed immediately on receipt of the goods, your request for compensation may not be accepted.

4.3 Lifting and unloading methods

Danger - Warning

Carry out the lifting and handling operations according to the information indicated on the valve and in the Manufacturer's Operation Manual.
The person authorized for unloading operations has to make sure all the necessary measures are adopted to ensure his or her safety and the safety of other persons directly involved.
Use means and accessories (ropes, hooks, shackles etc.) suitable for the load to be lifted.
Pay attention in the lifting phase to balance the load to avoid uncontrolled movements which could cause work injuries to persons.
Do not stack the packages as they are not sized for that purpose.
Do not drag or push the equipment as this will damage it.
Before lifting and handling the load, read the relevant information indicated in the "Information regarding safety" Chapter.

Harness the packages according to the indications and symbols applied on them.

Unload the packages from the means of transport and place them on a flat surface which can ensure the stability.

Avoid any kind of damage to the goods during unloading and handling. Always handle them with care.

5.1 Recommendations for installation

Danger - Warning

The installation operations have to be carried out by a technician specialised in such activities
Provide appropriate safety measures and use suitable equipment to prevent risk of work accident to the persons involved in the operations and to those nearby.
Harness and handle the valve concerned as described and shown in the "Unloading and lifting method" paragraph.

Before starting installation, define a safety plan which complies with the laws in force regarding workplace safety.

The specialist technician, authorized by the installer or owner, has to evaluate whether the area has been prepared properly and whether the necessary installation equipment is available (crane, etc.).

Define, on the basis of the configuration of the valve concerned, the assembly method, if the gear reducer and electric motor require preassembly.

Clean the coupling surfaces thoroughly.

5.2 Storage or shutdowns

Prior to installation

Avoid damp and salty atmospheres if possible. Place the valve on wooden platforms or protected from unfavourable weather conditions. The valves in the food configuration (model F and P) must only be stored indoor.

Long valve shutdowns after assembly

Set the valve in safety condition before starting operation.

Before starting the valve, check the electrical and pneumatic system along with all parts whose operation may be affected by long shutdowns.

Possible reuse after long shutdowns

Avoid damp, salty atmospheres during valve shutdowns.

Place the valve on wooden platforms, or protected from unfavourable weather conditions.

Set the valve in safety condition before starting operation.

Before starting the valve, check the electrical and pneumatic system along with all parts whose operation may be affected by long shutdowns.

Before starting up the valve, clean it thoroughly according to the instructions given on the product safety chart.

If the valve operates in different conditions, or it uses materials different from the previous application, ensure that the use complies to the INDICATIONS FOR USE section.

5.3 Supply

All valves have been preassembled and tested at the factory.

The actuators and accessories are supplied unfitted and separately from the valve.

5.4 Preparation

Remove the packaging.

Fit the actuator (manual lever, hand wheel, manual chain actuator, electro-pneumatic, geared motor, hydraulic or others).

WAMGROUP® supplies some of the above mentioned actuators which have to be bolted on by the customer.

The customer is liable for the installation of any other type of actuator different than those mentioned above. The customer will perform the mechanical analysis necessary to ensure an effective use.

Do not hang any heavy devices directly on the valves (screw feeder, belt conveyor, air slide, vibrating feeder, bin activator or similar).

Prior to installation the valves for food applications (model F and P), shall be subjected to cleaning and sanitation by means of a woven/non-woven cloth and sanitizer spray.

5.5 Installation and fixing of the valve

- Lifting the valve

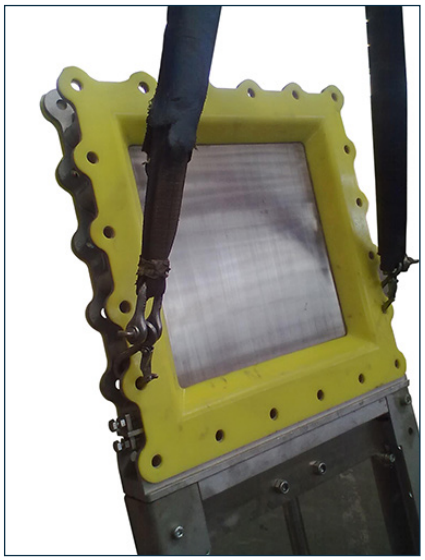
Danger - Warning

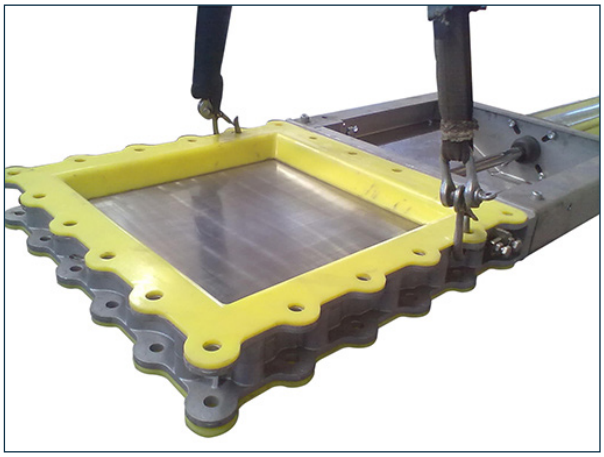
Carry out the lifting and handling operations according to the information shown on the valve and in the Manufacturer's Operation Manual.
The specialist technician authorized for carrying out the installation must make sure all the necessary measures are adopted to ensure his own safety and that of other persons directly involved.
The laws regarding workplace safety must be strictly followed.
Use means and accessories (ropes, hooks, shackles, etc.) suitable for the load to be lifted.
Pay attention in the lifting phase to balance the load so as to avoid uncontrolled movements, which could cause an accident.

Use lifting systems suitable to the weight and dimensions of the load to be lifted and the lifting distances concerned.

Use the lifting bores of the flange according to the stickers on the valve and the photo below.

- Valve lifting





- Fixing the valve

Place the valve in position and bolt it on carefully using nuts, bolts and stud bolts respectively. Use a specific tool with a torque of 30 Nm.

Ensure the valve is fitten on the right way (see assembly with actuator section).

For food valves versions (model F and P) assemble according to the instructions given on the technical sheet inside the package.

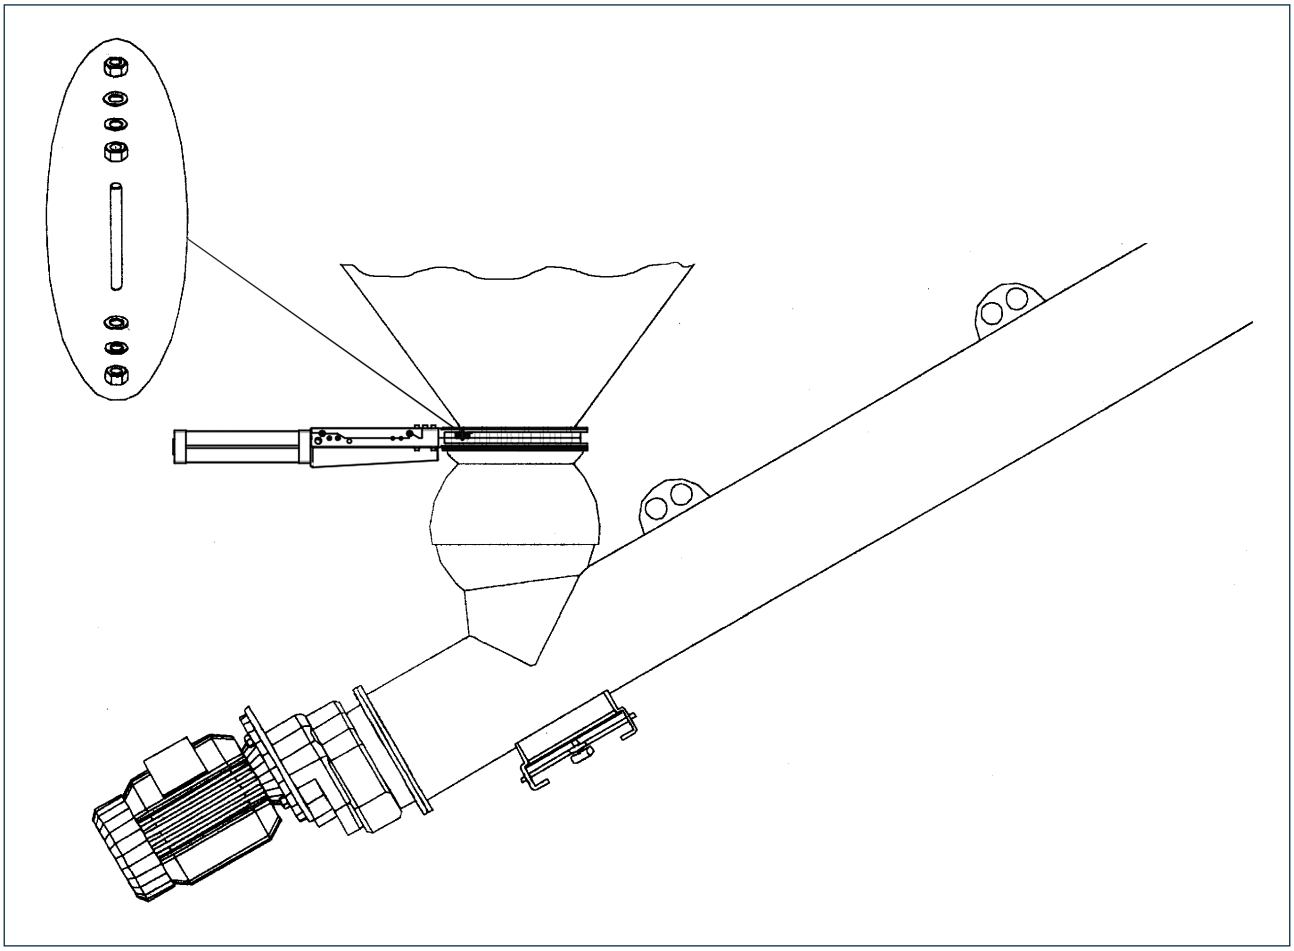
Carry out the pneumatic and electrical connections in compliance with the standards in force.

Important

For accident prevention it is essential keeping the valve out of personnel reach during operation. To this purpose the customer has to provide suitable safety devices such as grids, as well as protective inlet and outlet joints (either robust flexible sleeves or rigid pipe unions). However, the installer has to avoid that, even inadvertently, a person remains harmed (by using suitable hopper, safety grilles, etc.)

When employing mobile safety devices, provide protection limit switches that stop the valve instantaneously if the protection is opened or removed. Re-starting of the valve operation must only be possible when the protection is effective again (according to EN 1088).

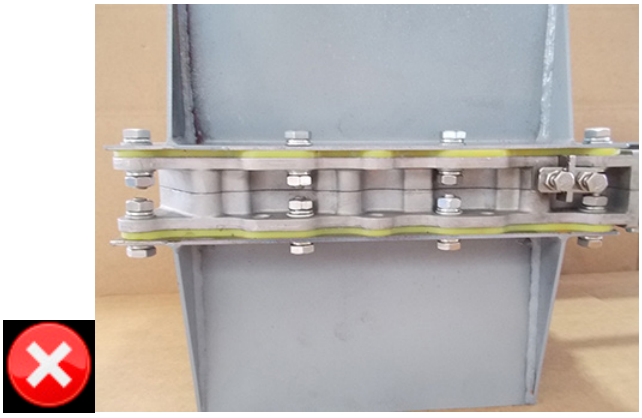
To fix such devices to the valve, use only stud bolts long enough to pass through the upper connecting flange, the valve and the lower connecting flange, obtaining though a “sandwich”. Otherwise the weight below would tend to pull apart the semi-bodies of the valve. Screw the nuts on according to the instructions below.

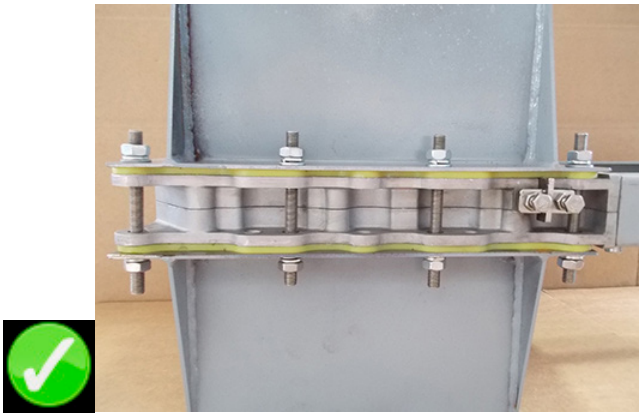


The inner nuts have no weight bearing function. They only serve to secure the valve when the downstream device is removed.

Ensure parallel tolerance of the connecting hopper flange is within 2 mm.

Check and remove any possible vibrations of the plant, which could affect the safe and correct working of the valve.





Ensure the valve is perfectly parallel after installation.

Avoid connection of square valve with round silo flange or round valve with square silo flange.

Ensure there is no pressurized air present in the valve inlet zone. Fluidification system has to be at list 30 cm far from the inlet.

Follow strictly the assembly instruction given for actuators.

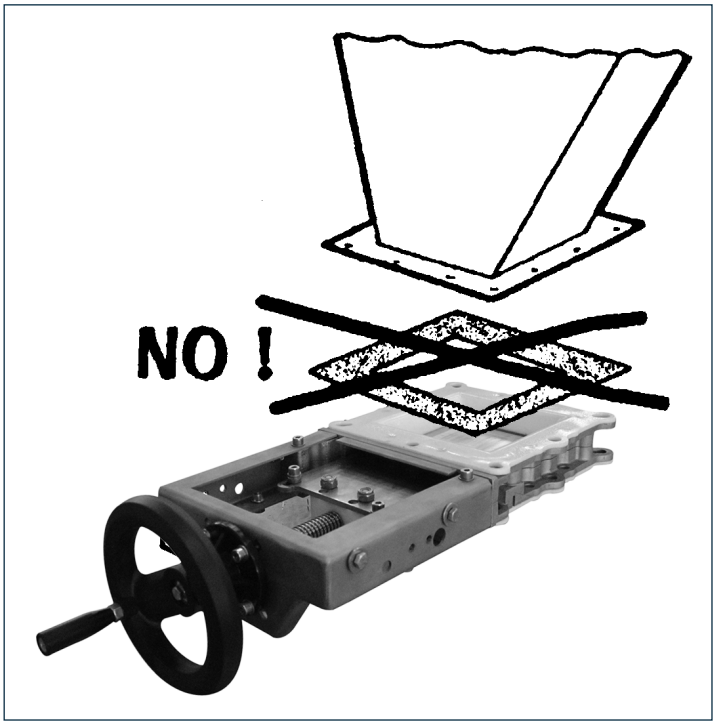
With lumpy, granular and fibrous materials use a steel blade.

With raised product columns it is recommended to insert a safety cup in the silo, above the valve.

Close the valve only when material is flowing. Valves must NOT operate in absence of material!

Clean the valve regularly with either air or water. This is particularly important if the material handled tends to compact or to solidify due to long shut-down periods.

Do not insert any type of gasket between the silo flange and the upper flange of the side valve!



Before enabling the specific actuator, ensure there are no signs of rust on the actuator shafts and remove any rust traces.

Grease the shaft and splined bush with conductive lubricating pastes such as adhesive lithium grease containing micronized copper powder. They are used specifically for lubricating dynamic contacts to facilitate passage of electric current:
- NLGI Consistency: 2;
- Temperature: -35°C/+220°C.

With higher material columns it is recommended to insert a baffle plate inside the silo, above the valve.

Check for and remove any possible vibrations of the plant, which may affect the proper working of the valve.

It is the responsibility of the installer, and of any person using the valve:
- not to start it unless it has been fixed to the parts of the plant provided for the purpose;
- not to start it if the system in which is fitted has not been certified in accordance with the laws in force;
- to install a system that prevents harm to persons or damages to property.

Important

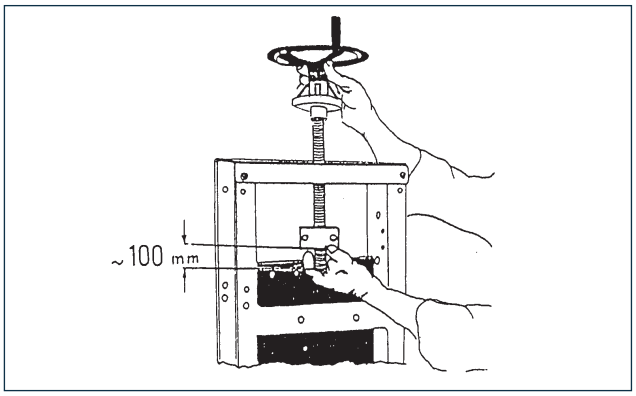
After carrying out the installation, check for misalignments and deviations to be corrected.

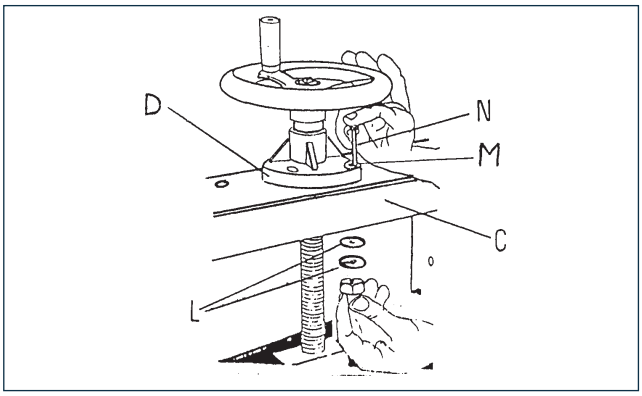
5.6 Assembly instruction

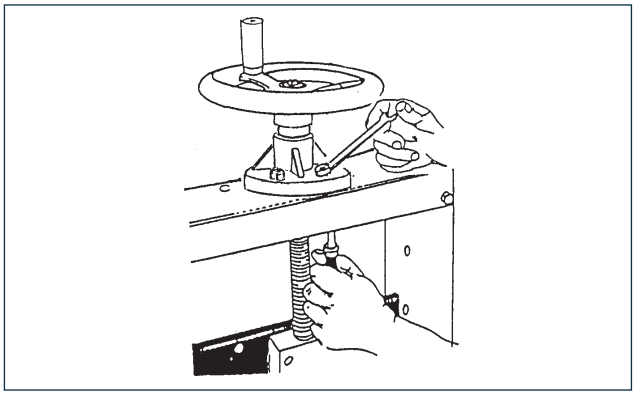
SUPPLY:

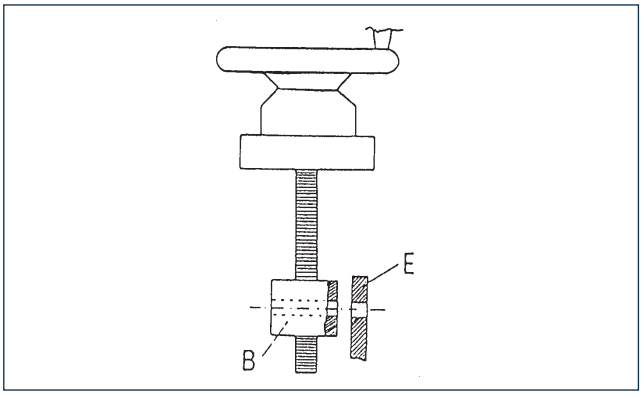
Manual Actuator assembly

A) 1 hand wheel cpl. with spindle
B) 1 nut screw
• Bolts, nuts, washers
• Cardboard box









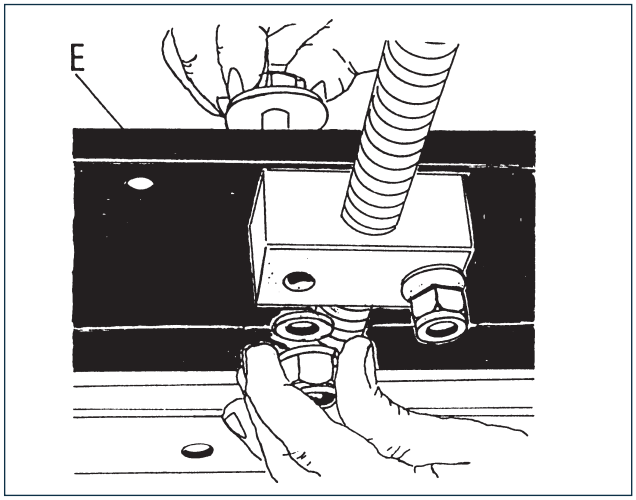
NOTE: During assembly the blade must rest on all bearings. Only after, lay the valve on the lower side for actuator assembly.

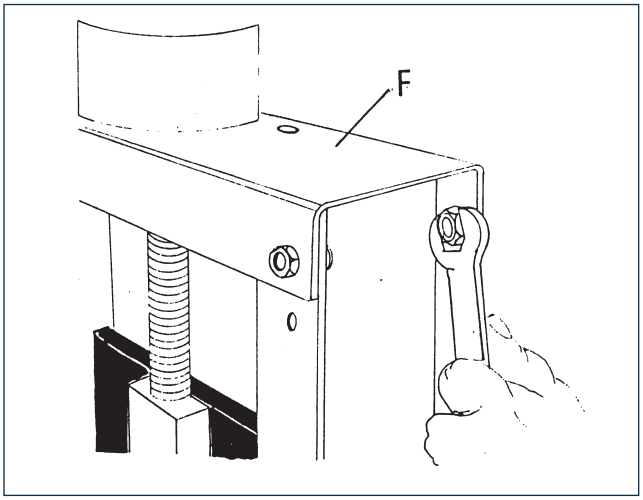
1) Insert spindle (**A**) into the central bore on the upper crosspiece of valve body. Screw the nut screw (**B**) onto the pindle (**A**) by approx. 100 mm.

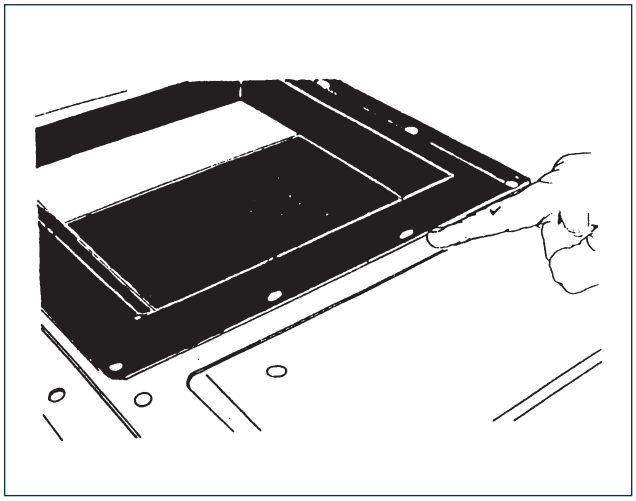
2) Insert the larger washers (**L**) on the inside of the valve frame (**C**) from below and the smaller washers (**M**) on the hand wheel support (**D**). Insert the bolts and nuts (**N**).

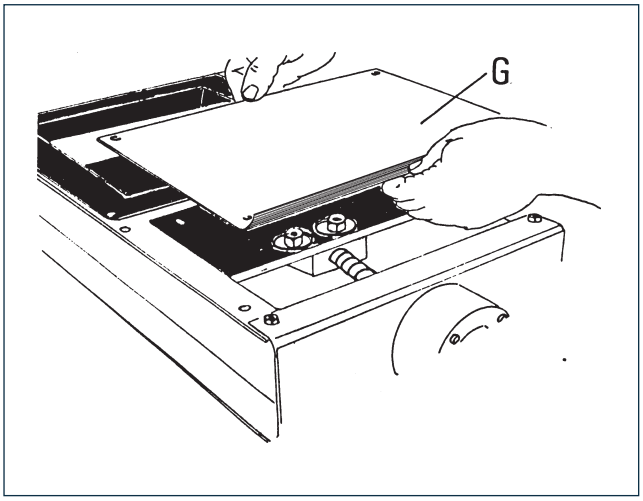
3) Tighten the bolts and nuts.

4) Rotate the hand wheel to match the bores on nut screw (**B**) and on blade (**E**).









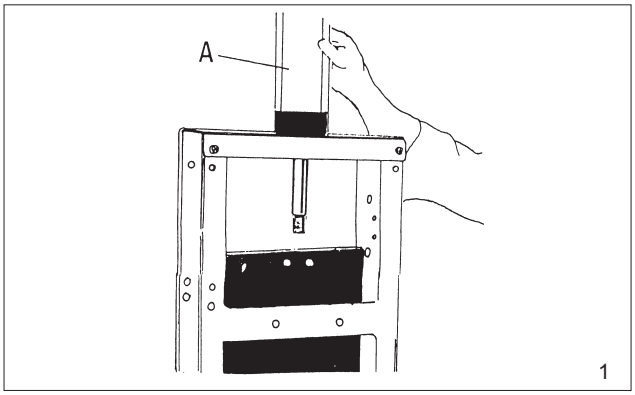
5) Insert the M12 bolts and the larger washers on the upper side of the blade (**E**). Position the smaller washers and the self-locking nuts. Do not tighten completely.

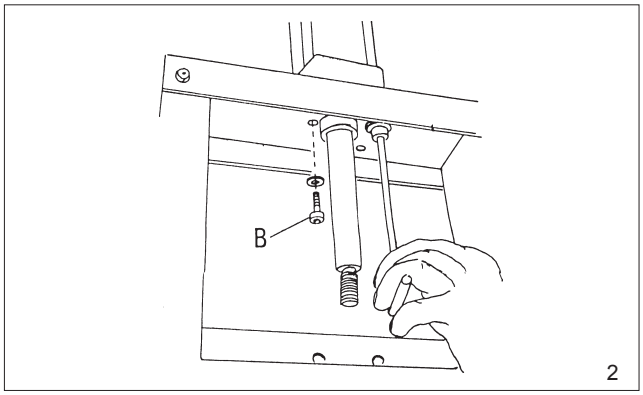
6) Tighten 4 connecting nuts between the cross bar (**F**) and the body. Check if the valve operation is correct by turning the hand wheel.

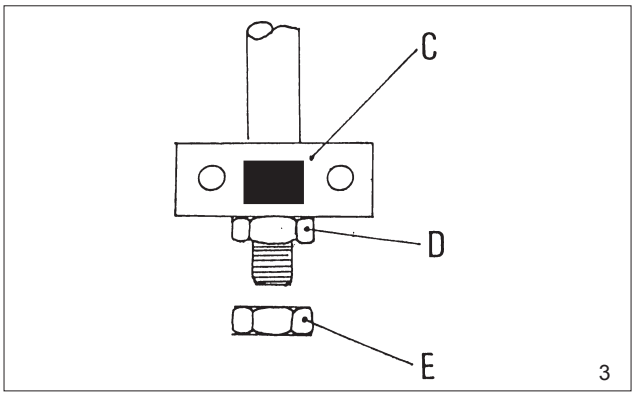
7) For valve installation use bolts which are short enough not to interfere with the blade.

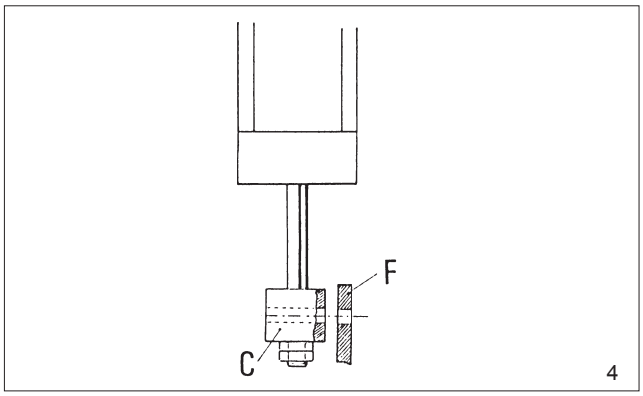
8) When assembly is completed, fit the top and bottom guard (**G**) ensuring they perfectly adhere to the frame. Check the positioning of the self-adhesive gasket.

SUPPLY:
C) 1 bush
H) 1 solenoid valve support bracket
B) Bolts, nuts, spring washers and flat washers
• Cardboard box









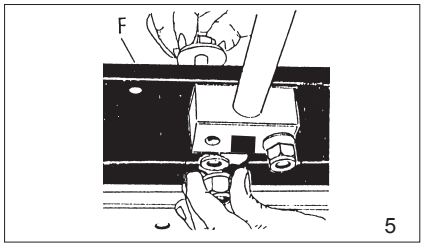
NOTE: During assembly the blade must rest on all bearings. Only after having checked this up - end valve for actuator assembly.

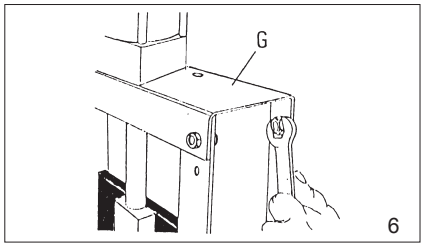
1) Insert the pneumatic cylinder (**A**) in central bore on the upper crosspiece of the valve body.

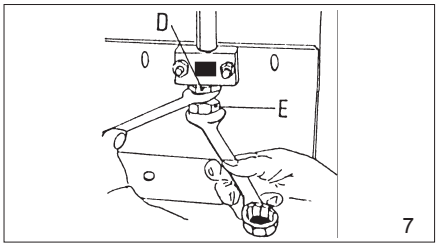
2) Fix the cylinder by inserting the 4 bolts M8x25, the spring washers, the flat washers and the nuts (**B**) from below and tighten crossways.

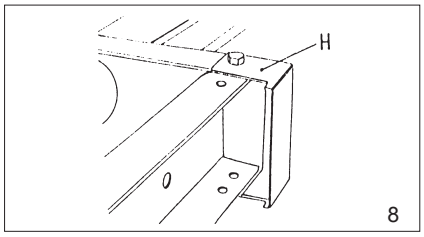
3) Fit the bush on the rod so that the sticker on the bush remains visible. Fix the bush by screwing on the nut (**D**) and the self-locking nut (**E**).Tighten bolts and nuts.

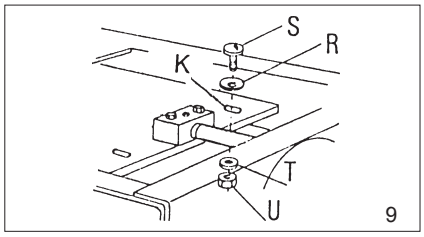
4) Slide down the rod to match the bores on bush (**C**) and on blade (**F**).

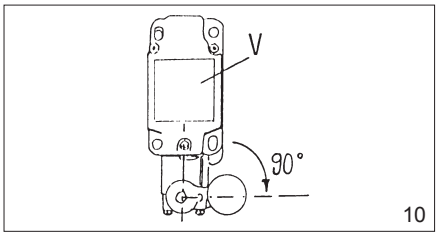


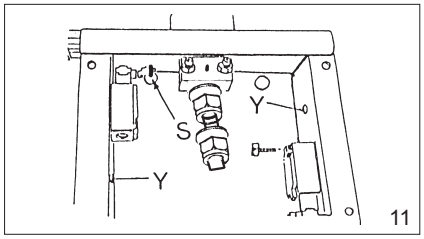


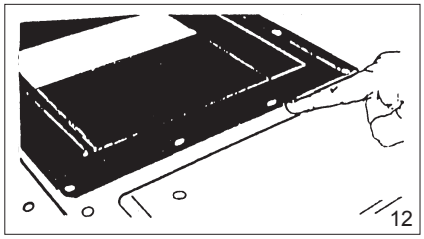


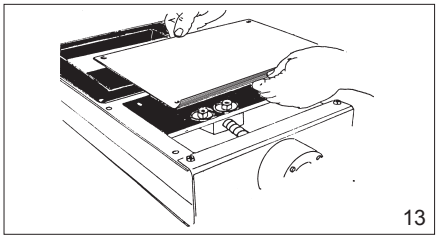












5) Place the M12 bolts and the large washers on top side of the blade (**F**). Insert the small washers and self-locking nuts without tightening completely.

6) Tighten the 4 bolts that fix upper crosspiece (**G**) to valve frame.

7) Loosen by a quarter turn the bush fixing nuts (**D**) and (**E**). Tighten the bottom nut (**E**) to the top one (**D**).

8) If required, now, fit the solenoid valve for pneumatic actuator to the support bracket (H) supplied separately by using 2 crosspiece connecting bolts.

9) Position the washers Ø 12 (**R**) on the bottom side of the blade. Insert the round head bolt M8x25 (S) and fix from the top side using washers Ø 8 (**T**) and nuts (**U**).

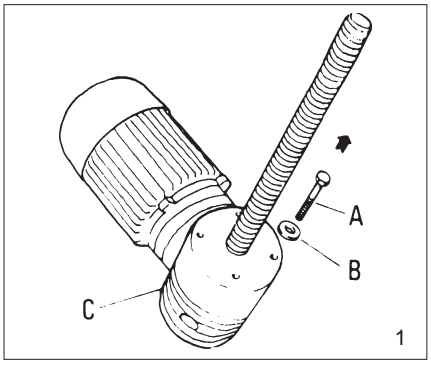
10) Position the arms of limit switches (**V**) to 90°so that, after having fitted the rollers, they face the blade slots.

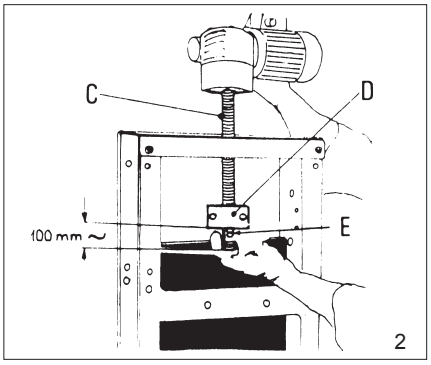
11) Fix the limit switches on the inside using nuts and bolts. Open the valve to 0 position, the head of the bolt (**S**) must rest on the limit switch roller. The bores (**Y**) are cable passages. Check the switch operation before starting regular operation. Refer to specific procedure for limit switch assembly reported in the next section.

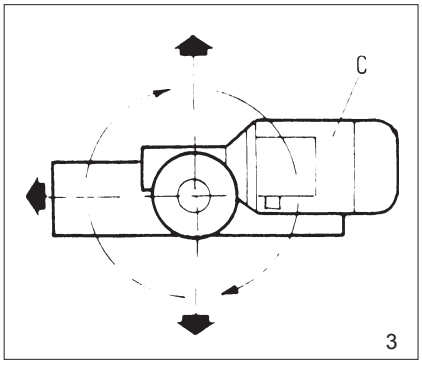
12) For valve installation use bolts which are short enough not to interfere with blade.

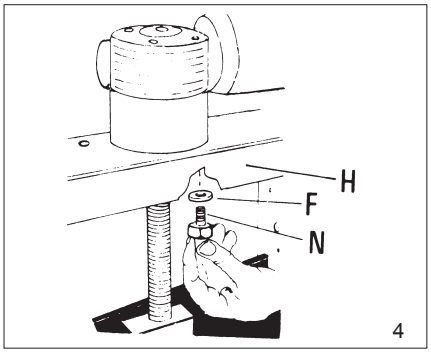
13) When assembly is complete, fit the top and bottom guard ensuring they perfectly adhere to the frame, and check the positioning of the self-adhesive gasket.

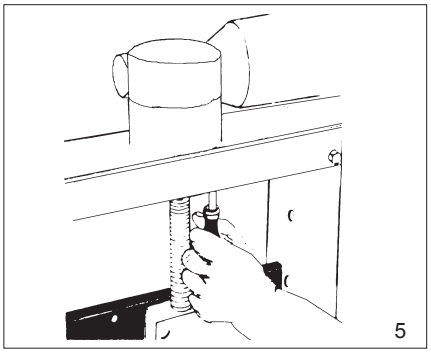
SUPPLY:
C) 1 gear motor actuator
D) 1 nut screw
V) 2 solenoid valves
• Bolts, nuts and washers
• Cardboard box

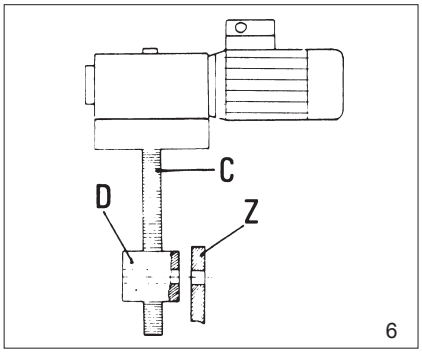












NOTE: During installation the blade has to be supported on all bearings. Only after having checked this, up-end valve for actuator assembly.

1) Remove the 4 bolts (**A**) and washers (**B**) from the actuator.

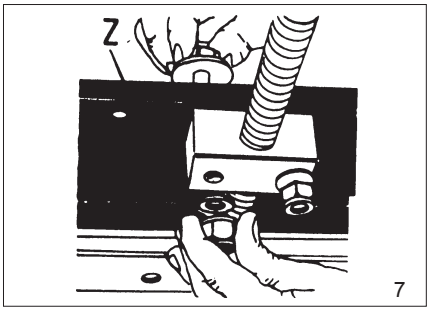
2) Insert the actuator spindle (**C**) in the central bore on the upper crosspiece of the valve body. Screw the nut screw (**D**) on the spindle by approx. 100 mm with the greasing nipple (**E**) pointing outside.

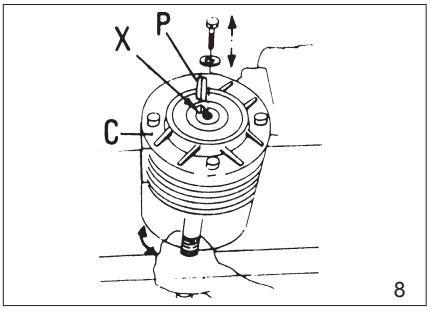
3) Choose the position of actuator (**C**).

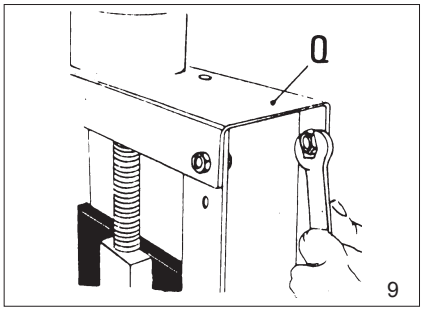
4) Insert the 4 washers (**F**) and bolts (**N**) from below through the upper crosspiece (**H**) in threaded bores of the actuator.

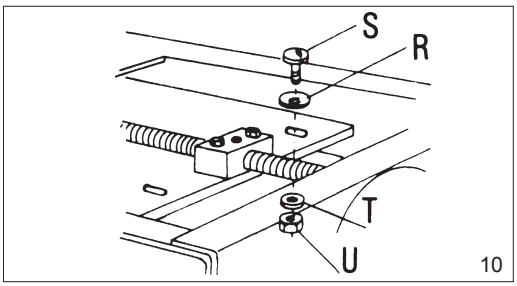
5) Tighten the bolts.

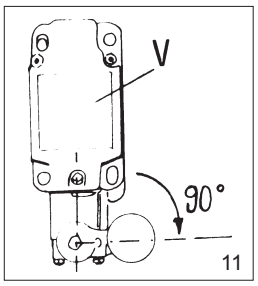
6) Turn the spindle (**C**) by hand until the bores on nut screw (**D**) and those on blade (**Z**) match.

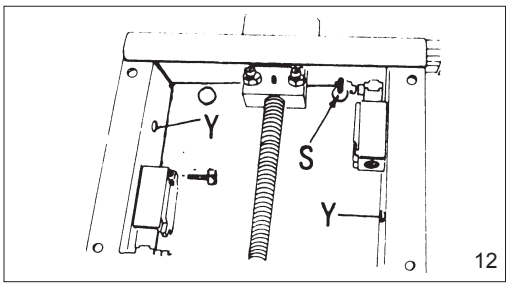


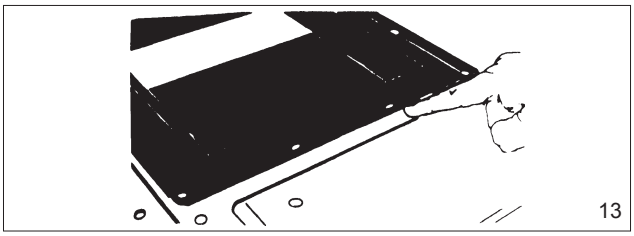


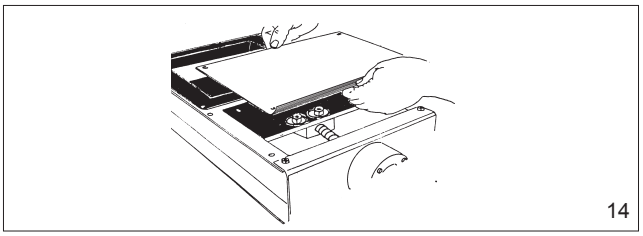












7) Insert from above into the blade (**Z**) the two M12 bolts along with the large washers. Insert the small washers and screw on the self-locking nuts from below without tightening them up.

8) Remove the central bolt and washer from the actuator top side. Turn the spindle by hand until the key slots in the reducer housing (**X**) are aligned. Insert the parallel key (**P**) and refit the central bolt and washer. Tighten the bolt.

9) Tighten the 4 bolts that fix the upper crosspiece (**Q**) to valve frame.

10) Position the washers D.12 (**R**) on the rear side in the centre of the slots. Insert the round head screws M8x25 (**S**). Insert the washers D.8 (**T**) and nuts (**U**) from the opposite side.

11) Position arms of limit switches (**V**) to 90° so that, after being fitted, the rollers face the blade slots.

12) Fix the limit switches to the inside using nuts and bolts. Open the valve on 0 position, the head of the bolt (**S**) must rest on limit switch roller. Bores (**Y**) are cable passages. Check the switch operation before starting regular operation. Refer to specific procedure for limit switch assembly reported in the next section.

13) For valve installation use bolts which are short enough not to interfere with blade.

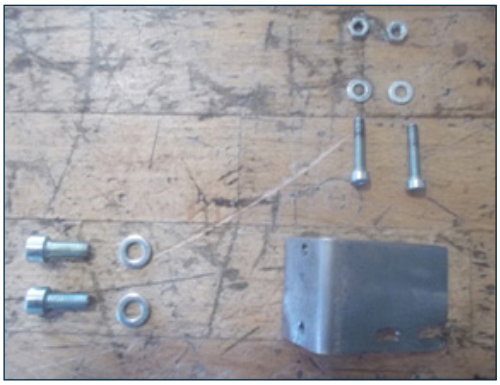
14) Carry out greasing (see Lubrication chapter).

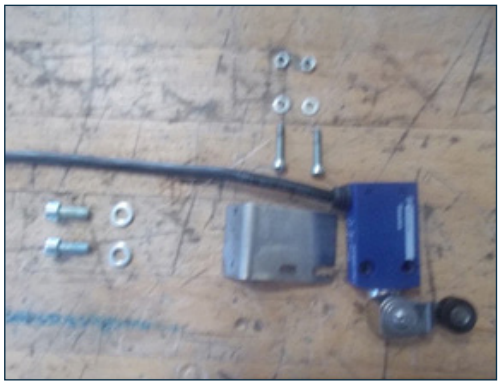
15) Fit the top and bottom guard ensuring they perfectly adhere to the frame. Check the positioning of the self-adhesive gasket.

MECHANICAL LIMIT SWITCH

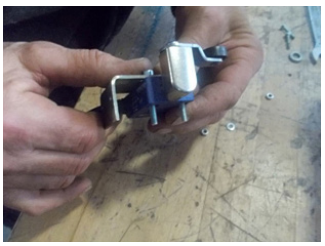
1) Position the arms of the limit switches (**V**) to 90° so that, after having fitted, the rollers they face the blade slots.

2) Remove from the box the fixing flange and four screws with their washers.

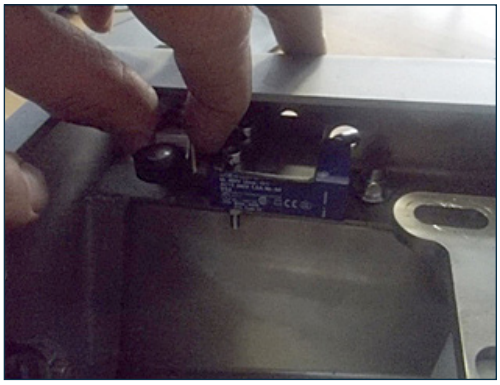




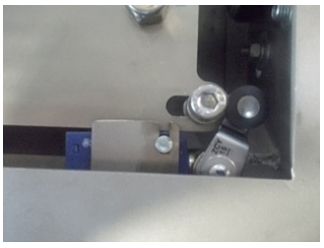
3) Fix the limit switch on the plate with the two screws M4x25.



4) Fix the plate on the outside of the valve body by means of the two screws M6x16 and washers.



5) Fit the drive system on the blade of the limit switch (cam) with the screw M8x25, screw, washer and spacer as shown in the figure. Check the operation the prior to starting regular operation.

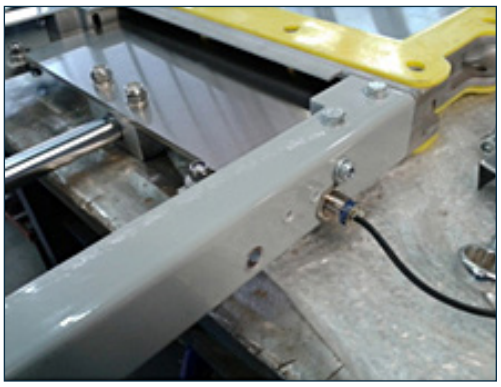


6) Repeat the operation for the second limit switch, if required.

INDUCTIVE LIMIT SWITCH

1) Remove from the box the detection system consists of plate and the related fixing screws. Then assembly according to the indications.

2) Fit the inductive sensor D.18 to the valve by using the appropriate bores.



3) Adjust the sensor on the basis of its reading / operation features.

4) Tighten the nut of the inductive sensor.

5) Check the operation the prior to starting regular operation.

6) Repeat the operation for the second limit switch, if required.

ADJUSTABLE SEAL SYSTEM

The valve is equipped with a seal adjusting system meant to vary the blade - gasket gap; this allows restoring / increasing the dust sealing in case of particularly thin dust or partial wear of the sealing gasket.

5.7 Electrical connection

Danger - Warning

The valve is not provided with an electrical system. Connection to the mains must be carried out by an electrician.
Provide a connection line for powering the valve in accordance with the provisions of the laws on the matter and taking into consideration the environmental safety requisites for installation and the envisaged operating conditions.

None of the basic utilities require electrical connection.

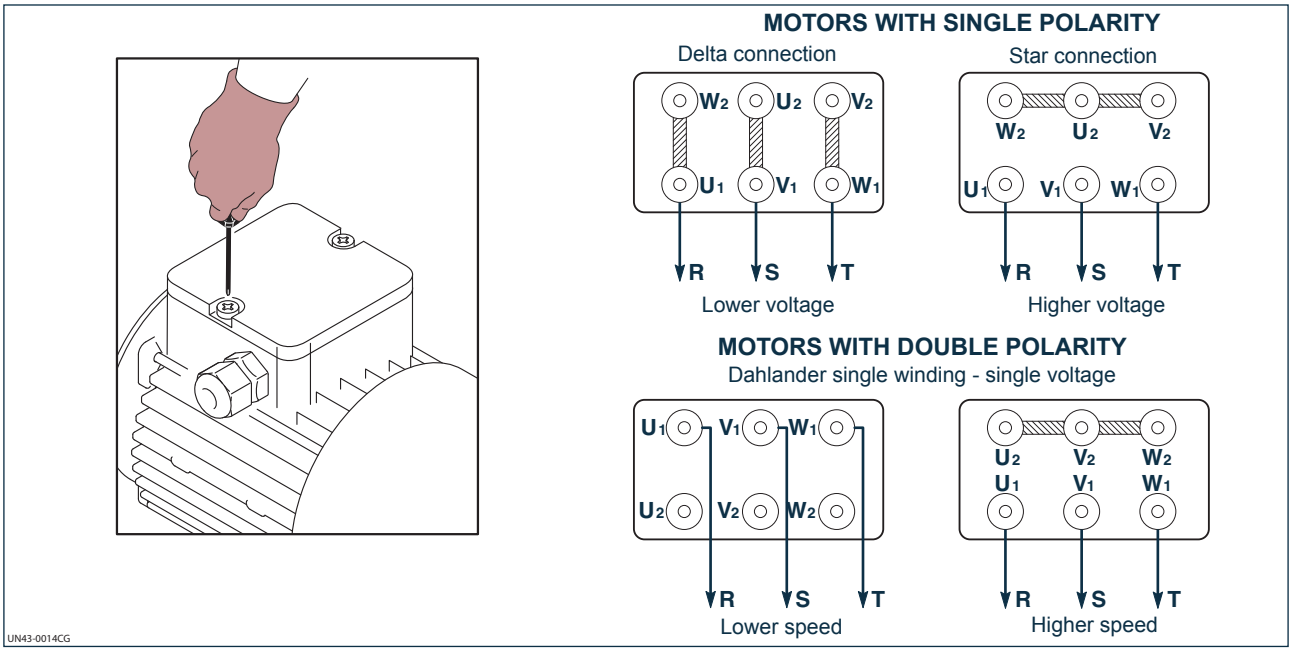
The installer must interface the valve with the necessary start/stop controls, emergency stops, reset after emergency stop, and micro-switches for inspection hatches, in compliance with existing regulations.

Before making the connection, ensure that the mains voltage and frequency correspond to those indicated on the electric component rating plate. Disconnect the power supply before carrying out any work and use suitable devices so that it cannot be accidentally reconnected.

Use electric cables having suitable cross-section for the power absorption of the motor of the valve.

The type of motor connection depends on the voltage value available to be applied; refer to the wiring diagram provided for each motor.

The illustration shows the wiring diagrams if the motor is supplied by **WAM**®. Refer to the manual on the website www.wamgroup.com



The installer will have to provide for interfacing the equipment with the necessary controls for: start/stop, emergency stop, reset after an emergency stop, in compliance with the regulatory standards in force.

In the testing phase, ensure that the motor rotation corresponds to the direction of rotation shown by the arrow applied on the motor.

If the rotation is inverse, invert the cable connections in the terminal board.

Disconnect the power supply before every intervention and use suitable devices to prevent accidental reconnection of the valve.

Before operating the valve 's actuator each time, ensure the protection devices are present and working properly.

During these checks make sure the sliding of the valve blade cannot harm any person or damage the valve.

The installer must connect the valve to the grounding system of the plant.

5.8 Compressed air connection

None of the basic utilities require the use of compressed air.

If pneumatic actuators are used, it is installer's responsibility to make sure the compressed air pipes are fixed properly and provide the required protection for sudden detachment of the piping.

COMPRESSED AIR FEATURES

The connection of the compressed air could cause the opening or closing of the valve; it is therefore necessary to make sure, prior to connecting it, the valve is in suitable safety conditions.

The compressed air supplied to the pneumatic components must have special features:

1) Filtered: free of scum which may damage the components internally.
2) De-moist: use of a condensate tap is advisable.

ATTENTION

Before connecting the compressed air to the utilities:

- drain the piping;
- check the pneumatic components to see if they require lubrication;
- if pneumatic actuators are used, it is the installer's responsibility to make sure the compressed air pipes are fixed properly and provide the required protection for sudden detachment of the piping section;
- check the pneumatic pipes to make sure they are tightened properly.

The related actuator operation manuals are available on the website www.wamgroup.com.

5.9 Inspection

Important

When installation is complete, authorized personnel must carry out a general test to make sure the safety conditions have been completely satisfied.

The authorized personnel must also check:
- That the linearity error of the valve is within the values indicated (see specific paragraph);
- That no tools or other material have been left inside the valve;
- That the fixing screws have been tightened using the prescribed torque;
- The level of oil in the actuator gear reducer is correct.

Before starting to operate the valve:
- Ensure that the plant in which the valve is installed complies to the Directive 2006/42/EC and the relevant directives, the safety standards in force and those specifically applicable.
- Make sure the inlet and outlet spouts of the valve are connected to the final equipment or plant in order to prevent access to hazardous areas.
- Ensure the operating conditions are complied with.
- Make sure the food versions (model F and P) were properly cleaned and sanitized.

Start up the valve without load to ensure the sliding of the blade is correct and easy;

Operate the valve for about 1 to 3 minutes to ensure it is working correctly.

In the presence of:
- Unusual noise;
- Overheating of the motor and/or gear box;
- High friction of the disc against the inner seal;
- Not enough torque to open and close the valve.

Stop the valve and remove the cause of the malfunctioning.

Danger - Warning

When sizing the valve, check for any chemical incompatibility between the material and the components of the valve.

6.1 Production Start-up

Before starting up the valve, the operator in charge and authorized for the production must ensure the safety devices installed are present, in working order and that the operating conditions are followed (inlet and outlet spouts connected correctly or protected, etc.).

Especially with materials which tend to harden or become sticky through longer periods of storage ensure no material or liquid is deposited on the shaft passages. In such a case clean the area thoroughly.

Start valve operation on empty. If valve works correctly, add material and proceed with regular operation.

Important

In case of excessive noise, strong vibrations, etc. stop the valve and report the problem to the person in charge authorized to intervene to restore correct working.
Do not use the valve if damaged.

Operation

Depending on the type of plant, the valve can be operated either manually, electropneumatically or by a geared motor. In the last two cases the valve is controlled by a remote control panel or by a local starter.

The weight of the material column must not exceed the resistance of the mobile valve parts.

Regular cleaning increases the life of the valve. This applies in particular to those application in which the materials handled either tend to harden or become sticky when stored for a longer period.

Important

The material weight on the sliding of the blade must never be greater than its maximum static torque. As it is difficult to calculate this weight exactly due to varying of material proprieties, as rule of thumb, one may consider there are no problems with bulk density < 1.13 kg/dm^3 in standard hoppers or silos. When dealing with materials with higher bulk density check with the customer service.

Important

Operate the valve always when material is flowing.
These valves are specifically provided for work with powdery or granular materials and not with liquid ones.

6.2 Cleaning the valve after clogging

If, during normal operation, the valve actuator is found to be moving gradually under stress and then comes to a complete stop, it is highly probable that the problem is caused by a blockage.

Danger - Warning

The authorized operator must strictly apply all laws regarding workplace safety and adopt appropriate protective measures against work accidents.
Specifically, do not insert the hands into the inlet/outlet next to the valve if the blade has not been blocked safely using external means.

Danger - Warning

Disconnect the valve from all mains and use the appropriate means to prevent it from being reconnected accidentally.

Proceed as described.

- Cut off the actuator power supply to the valve or block the hand lever in a fixed and safe position.
- Remove the outlet sleeve and ensure that the outlet spout is not obstructed by material or deposits and clean it using a tool, if necessary.

Danger - Warning

Never insert the hands inside the valve.

Before disconnecting the valve, ensure the pneumatic actuator contains no compressed air.

6.3 Shutdown of the valve at the end of the work cycle

There is no special switch-off procedure.

The stop of the valve is made with the shutdown of its actuator. It is advisable to drain the valve at the end of each working day. This is particularly important when the material transported handled tend to harden or become sticky when stored for a longer period.

6.4 Long shutdowns of the valve

When the valve remains unused for long periods, proceed as described below.

1) Empty the valve of the product it contains to prevent it from hardening.
2) Clean the valve (see “Cleaning the valve”).
3) Grease the coupling between valve and actuator.
4) Grease actuator components if necessary.
5) Repair the damaged or worn mechanical parts, if necessary.
6) Cut the power supply.

6.5 Reuse

Important

If the equipment is to be used in different conditions and with materials other than the previous application, ensure the “Permitted use” indications are complied with.

Before reusing the valve after a prolonged shutdown, proceed as described below.

1) Check the main nuts and bolts to make sure they are tightened properly.

2) Set the valve in safety conditions before starting operation making sure the valve is completely empty.

3) Check the supply system and all parts the working of which may be affected by long shutdowns.

4) Clean the valve thoroughly according to the instructions given on the product safety chart.

5) If the valve operates in different conditions, or using materials different from the previous application, ensure this use complies the INDICATIONS FOR USE section.

6) Start up the valve (see “Production Start-up”).

Danger - Warning

Before carrying out any maintenance operation, activate all the safety devices for the safety of the persons involved in the operations and those nearby.
Set the valve concerned in safety condition.
Wear suitable personal protection devices; in this regard, consult the person in charge of safety of production activities.

Important

Failure to strictly follow the instructions can cause problems and invalidate the warranty on the valves supplied.

- Scheduled maintenance Table

Component	Operation to be carried out	Daily	Weekly	Every month	Every six months	Every two years	Manual reference
Safety device	Performance check	•					
Valve	Remove dust residue from the outer surface	•					
Valve outlet	Check if the outlet is free of material residues. Otherwise, clean it thoroughly to remove all obstructions that block the material flow		•				
Earthing connection	Integrity of electrical connection			•			
Seal	Check the wear			•			
Bushes	Check the wear				•		
Flanges	Verify fixing				•		
Actuator coupling	Check and remove any rust						
Seal	Replace					•	
Actuator bracket	Check condition				•	•	
Safety and information signs	Check the condition and legibility				•		

Important

Part replacement depends on the use of the valve and type of material handled.

7.1 Cleaning the valve

Clean the outside part of the valve using a vacuum cleaner to prevent dispersal of dust in the environment and in the surrounding area, or use a moist cloth.

Do not use compressed air under ATEX condition.

Wash the valve, after vacuuming the dust, with a low-pressure water jet.

Before start-up the valves for food applications (model F and P), has to be subjected to cleaning and sanitation by means of a woven/non-woven cloth and sanitizer spray.

7.2 Lubrication

Lubrication operations have to be carried out (see periodic check maintenance), using conductive type grease pastes on the following parts:

- Connecting shaft;
- Earth wiring contact screw.

N.B.: A routine lubrication cycle is only recommended for the CRGX electromechanical control, with grease suitable for ATEX applications applied on the bronze block approx. every 300 opening/closing cycles.

8.1 Safety recommendations for replacement

Danger - Warning

The replacement operations must be carried out by a specialist authorized technician with specific skills in the sector concerned (mechanical, electrical etc).
Before carrying out any operation, provide suitable safety measures and use the appropriate equipment to prevent risk of work injuries to persons involved in the operations and those nearby.
Activate all the safety devices envisaged and prevent access to controls which, if activated, could cause work injuries to the persons involved in the operations.

8.2 Replacement of worn parts

The seal and roller bearings (blade supports), which are the only wear parts in the **VIB** type valves, must be replaced after a certain period, depending on the material and application.

We suggest replacing the seals and roller bearings every 2 years, as you can see in the Maintenance Schedule table.

For spare part codes refer to Spare Parts section.

Proceed as described.

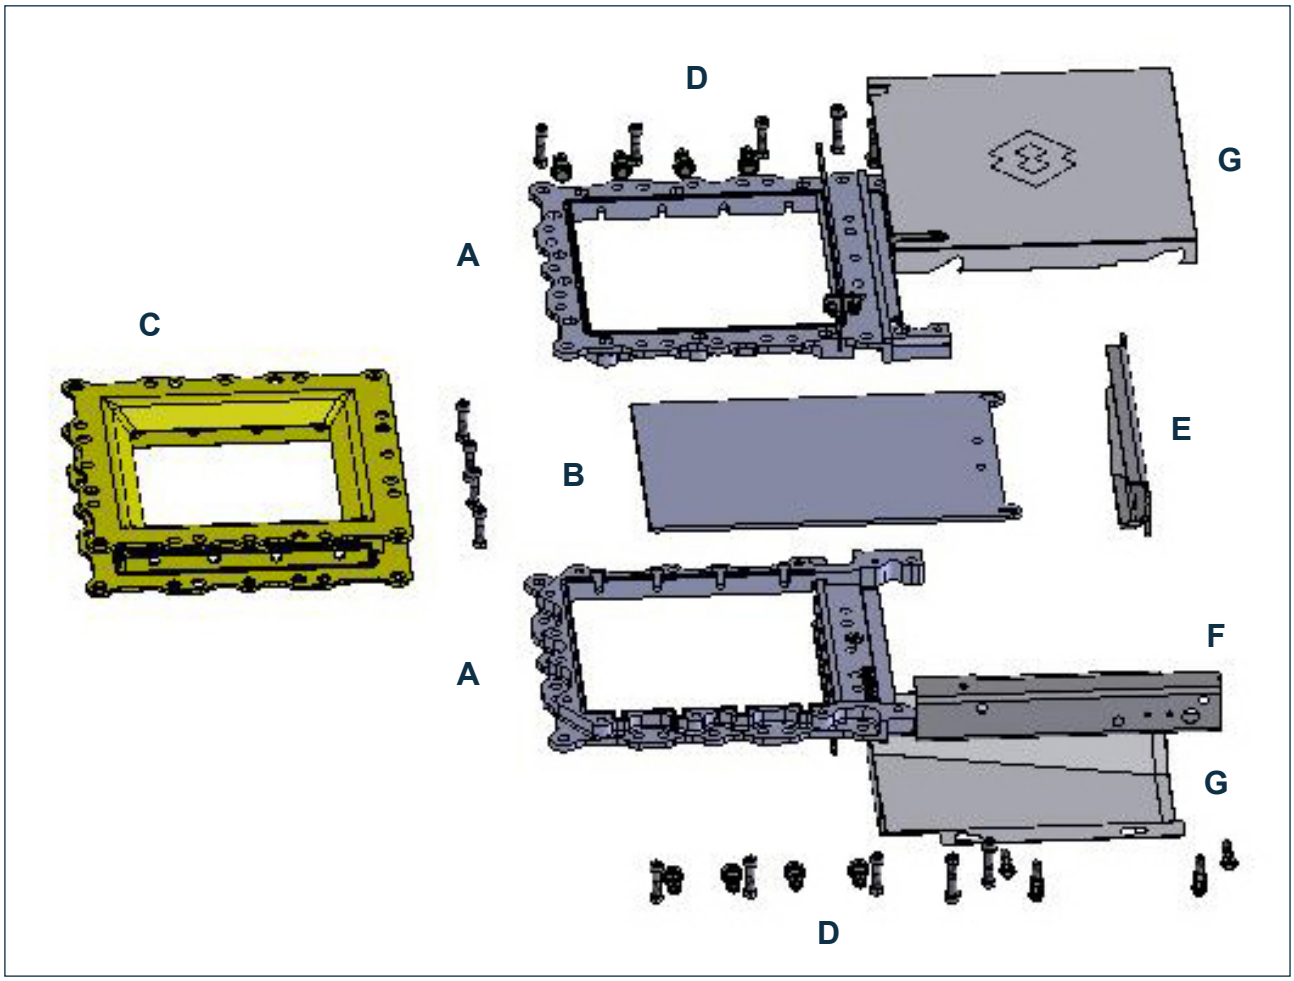
1) Ensure the container below which the valve is fitted is empty;

2) Disconnect from the mains and the compressed air supply from the actuator;

3) Remove the actuator;

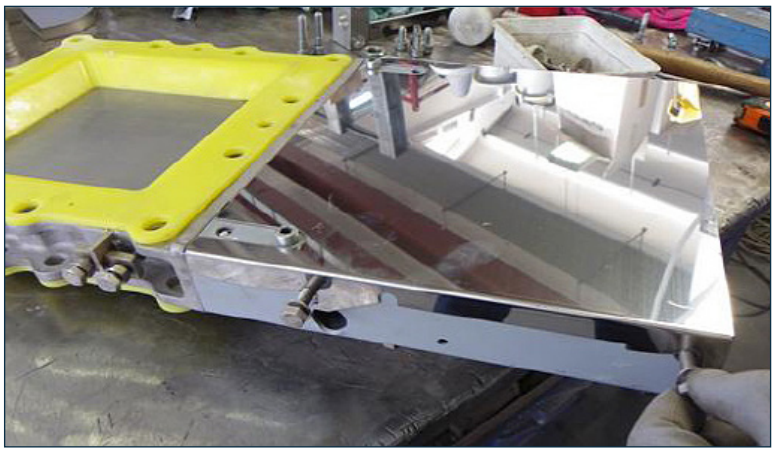
4) Remove the valve.

VIB

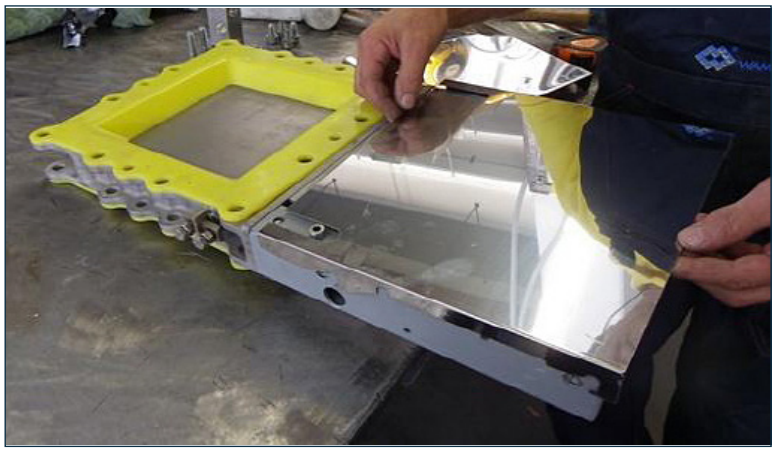


A) Die cast aluminium semi-bodies
B) Blade
C) SINT® liner
D) Roller bearing
E) Actuator fixing plate
F) Back lateral frame
G) Protection plate

5) Loosen the bolts (**8**) and (**10**) and remove them. Do not lose the nuts (**9**);

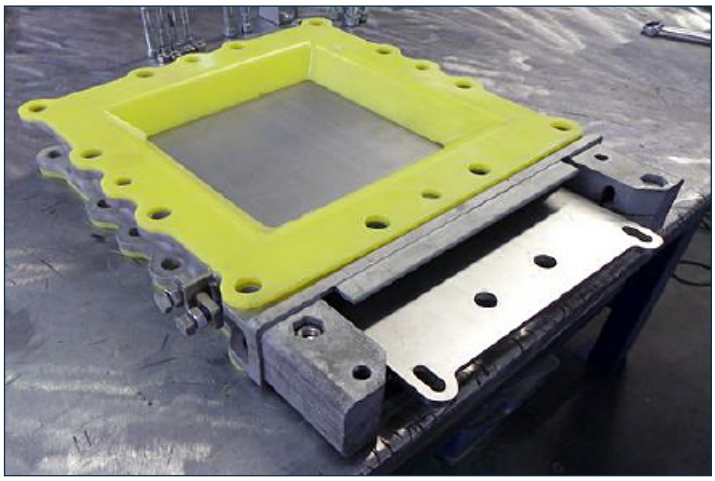


6) Remove the rear cover;

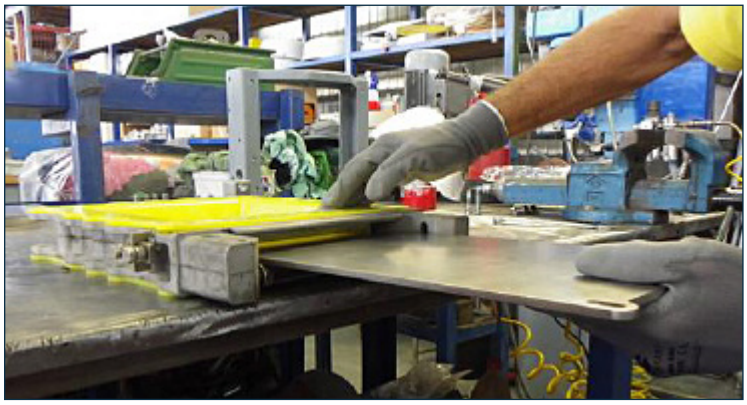


7) Remove the fixing screws on the rear of the metal body.

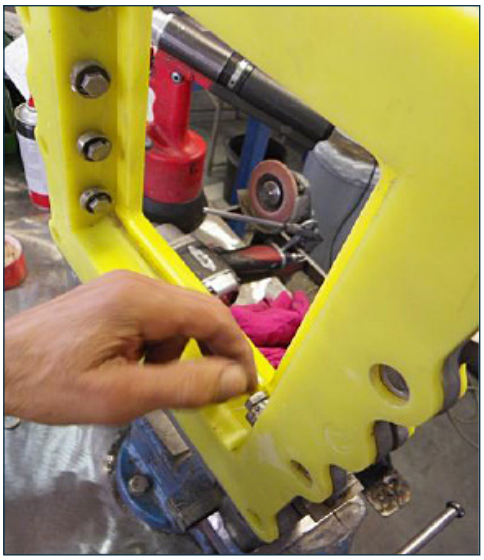
8) Remove the metal body from the back;



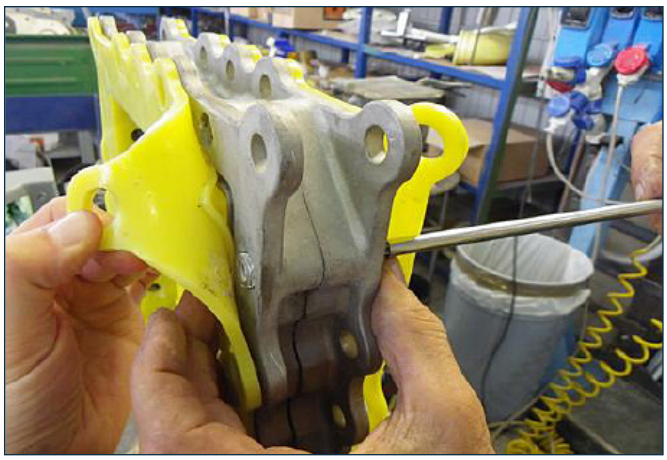
9) Separate the blade along with the seal from the valve body; verify the position of the blade beveled side for its correct repositioning.



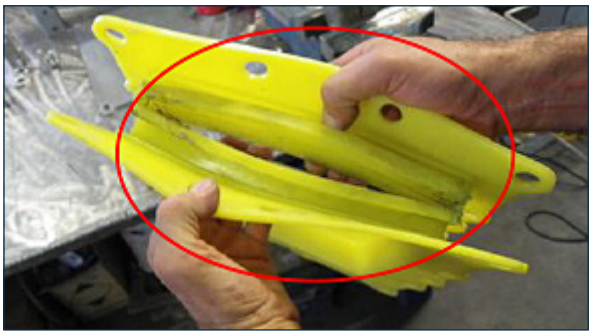
10) Remove the roller bearings from the body (**6**) from the disc shaft;



11) Remove the fixing screws (**6**) the aluminium body, located under the gasket;

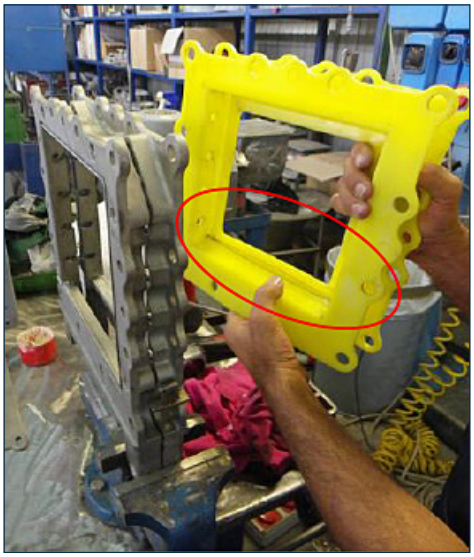


12) Separate the two aluminium half-bodies and remove the seal.

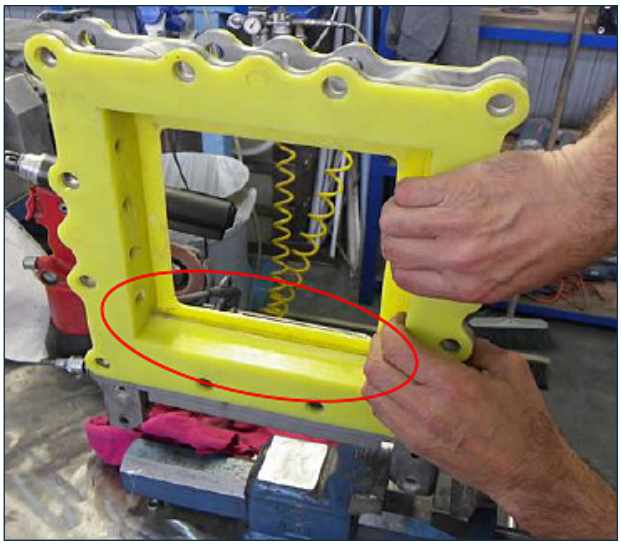


ASSEMBLING PROCEDURE

13) Ensure the seal does not get damaged. Fit the new seal by positioning vertically the valve body to facilitate the operation. Keep the seal body with the gap down. Make sure the food versions (model F and P) were properly cleaned and sanitized.



14) Fit the seal to the half-bodies made from aluminium by matching the bores and positioning the gap of the blade down.



15) Insert the nuts and the screw and tighten.

16) Assemble the bearings with screw and bush in the seats of the valve body. (Fig. 10)

17) Remove the blade and insert it into the valve body through the gap at the bottom, by sliding them on the bearings. Abut the blade to close the valve. (Fig. 9)

NOTE: The blade must be assembled by keeping the beveled side to 20 ° on the front, facing the opposite side of the bearings.

18) Fit the steel body on the aluminium valve body by centring the bores and abutting it. Use a rubber hammer if necessary. (Fig. 8)

19) Insert the fixing screws and tighten. (Fig. 7)

20) Fit the cover on the steel part of the valve body, match the slots to the screws and bores on the side. (Fig.6)

21) Assemble the screws and washers on the fixing surface of the cover and tighten. (Fig.5)

22) Reinstall the valve according to “Installation and fixing of the valve” section.

The seals, fitted on food configurations (**D**), shall be provided individually packed in plastic bags inside a paperboard box.

The client has to keeps trace of the seal lot reference number for an easier future traceability. The lot number of the seal is present in the Instruction for cleaning and sanitizing provide inside the package.

For the replacement of bearings the valve doesn’t need to be completely disassembled.

8.3 Returning the valve

When returning the valve use the original packaging if it has been preserved, otherwise fix the it on a pallet and cover it with nylon shrink-wrap, to protect it as best as possible from impact during transport. In any event, make sure there is no residue material inside the valve.

8.4 Dismantling and disposal

Dismantling of the valve must be entrusted to personnel specialized in these activities and equipped with adequate skills.

Dismantle the components of the valve concerned; if necessary contact the Manufacturer for further information.

The components dismantled have to be separated on the basis of the nature of the materials of which they consist, in compliance with the laws on the matter of “differential collection and disposal of wastes”.

With reference to the WEEE Directives, electrical and electronic components, marked with a special symbol, have to be disposed off in authorized collection centres meant for the purpose.

Unauthorized disposal of “Waste Electrical and Electronic Equipment” (WEEE) is punishable with fines governed by the laws concerning the matter.

9.1 Trouble-shooting

Minor problems can be solved without consulting a specialist.

The following Table contains a list of the most common problems, the possible causes and possible remedies.

For particularly difficult actions which are not mentioned in the Table, contact the Manufacturer's Customer Service Department.

Danger - Warning

Before carrying out any operation "set the valve concerned in safety" (see "Glossary and terminology"), operate according to the indications on the "Operation and Maintenance Manual" and in accordance with and in compliance with the standards in force as regards health and safety.

FAULT	POSSIBLE REASON	SOLUTION
A) The valve does not open or it remains opened.	1) Lumps inside the material.	1) Remove the valve, clean it thoroughly and reinstall it.
	2) Bulk density too high.	2) Provide weight relief inside the bin cone.
	3) Actuator air pressure too low.	3) Check for leakages in compressed air mains and repair.
	4) Drive power too low.	4) Check the electric motor and the mains. Then remove the fault.
B) The valve leaks.	1) Valve does not close completely.	1) See item A.
	2) Seal worn out	2) Replace the disc seal.
C) Valve opens and closes with difficulty	1) See item A.1-A.2-A.3-A.4	1) Ensure valve works in axis
D) Excessive presence of dust	1) Fluidization nozzles too close to the valve	1.1) Substitute nozzles with vibrator o knocker or move nozzles from present position
		1.2) Provide breather hole in the bottom system
	2) Material column always too high	2) Provide weight relief above valve
E) Infiltration of powder or water in the rear part of the valve	1) Guard incorrectly positioned	1) Fit the guard tightly onto the valve frame

9.2 Check-list in case of fault

If you have been unable to solve the problem on the valve even after having carried out the operations suggested in paragraph “Trouble-shooting” please contact the plant technician/installer/or the Manufacturer.

If technical assistance is required, in addition to the valve data, the plant technician/installer or Manufacturer will also need information concerning the plant in which the valve is installed, its installation and its working, for better identification of the problem that has occurred.

Obviously many of the checking operations which are requested have already been performed in the various steps during installation, testing and start-up of the valve concerned.

Danger - Warning

Before carrying out any operation “set the valve concerned in safety” (see “Glossary and terminology”), operate according to the indications on the “Operation and Maintenance Manual” and in accordance with and in compliance with the standards in force as regards health and safety.

1) Information necessary

a) Description of problem;

b) Material handled;

c) Photo showing the entire valve and how it is installed;

d) Valve type;

e) Does the valve start up without any problem after long shutdowns?

f) Is the outlet spout free of encrustations which reduce the cross-section?

g) Is the vent of the weigh hopper into which the valve discharges the material sized correctly; is it clean and does it work properly?

2) Checking the silo

a) What is the inclination of the cone?

b) How much material does the silo contain?

c) Is the silo equipped with a bridge-breaker baffle plate?

d) Is the silo provided with fluidization/aeration?

How many nozzles or aeration pads are preset on the cone, how are they arranged and what is their distance from the outlet flange of the silo?

What is the operating pressure and the operating cycle?

e) Is the silo provided with a vibrator or a hammering device?

What is the operating cycle?

NOTE: If the valve got clogged with product in a silo which cannot be emptied, cut the bottom of the scraper and make sure the adjustable seal system is in 0 position.

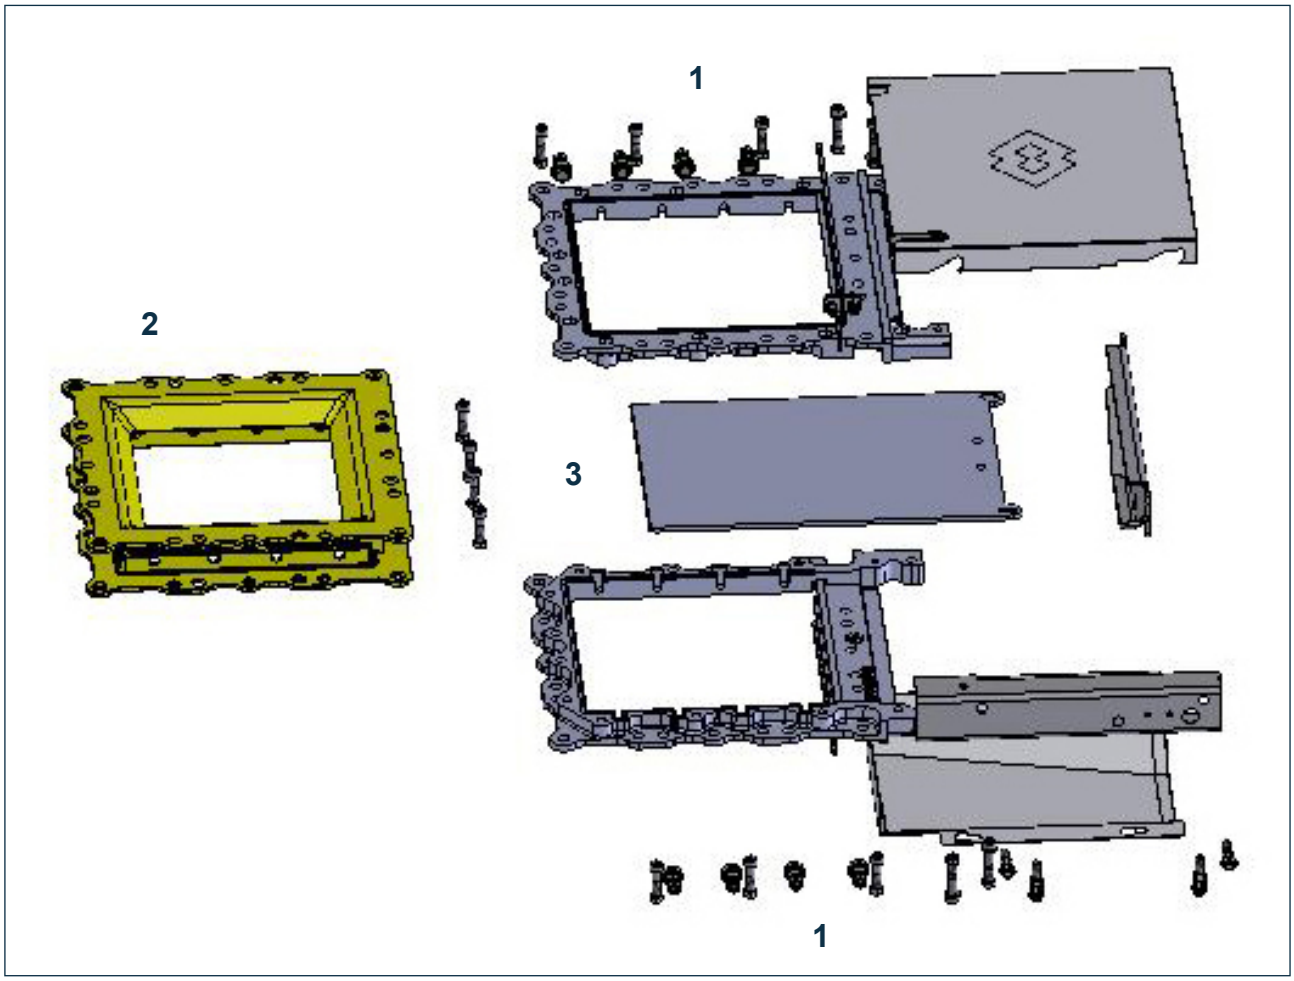
Use original spare parts only.

For the identification of spare parts and wear components codes, refer to the drawings in the dedicated catalogue.

Please find below a list of components to which reference can be made.



1) Roller bearings

2) Seal

3) Blade

NOTE: All other elements in the drawing do not represent spare parts.

A1 Nuts and bolts tightening torque Table

WAM®

All the products described in this catalogue are manufactured according to **WAMGROUP S.p.A. Quality System procedures**. The Company's Quality System, certified in July 1994 according to International Standards **UNI EN ISO 9002** and extended to the latest release of **UNI EN ISO 9001**, ensures that the entire production process, starting from the processing of the order to the technical service after delivery, is carried out in a controlled manner that guarantees the quality standard of the product.

*Alle in diesem Katalog beschriebenen Produkte werden gemäß dem **Qualitätssystem der WAMGROUP S.p.A.** hergestellt. Das im Juli 1994 gemäß der internationalen Norm **UNI EN ISO 9002** und auf die neueste Version der **UNI EN ISO 9001** erweiterte, zertifizierte Qualitätssystem der Firma gewährleistet, dass der gesamte Produktionsprozess von der Auftragsbearbeitung bis zum technischen Kundendienst nach Lieferung in kontrollierter Art und Weise erfolgt, so dass der Qualitätsstandard des Produkts gewährleistet ist.*

Tous les produits décrits dans ce catalogue sont fabriqués selon les procédures du **Système de Qualité de WAMGROUP S.p.A.**, certifié en Juillet 1994 selon les normes internationales **UNI EN ISO 9002** et étendu à la dernière version de la norme **UNI EN ISO 9001**. Cela garantit que le processus de production, à partir de la gestion de la commande au service technique après-vente, est effectué de manière contrôlée garantissant la norme de qualité du produit.

*Tutti i prodotti descritti nel catalogo sono stati realizzati secondo le **procedure del Sistema Qualità di WAMGROUP S.p.A.** Il Sistema Qualità aziendale, certificato dal luglio 1994 in conformità alle normative internazionali **UNI EN ISO 9002** e successivamente esteso all' ultima versione delle normative **UNI EN ISO 9001**, garantisce che l'intero processo produttivo, dalla formulazione dell'ordine fino all'assistenza tecnica dopo la consegna, si svolga secondo modalità controllate che garantiscono lo standard qualitativo del prodotto.*
