**Footnotes:**

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.

\* Used year 3 predictions for Portage and year 3 for Goose presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516. Ver 0

\*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).

Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.

**2013 Comparison of predicted pit water quantity and quality to the measured water quantity and quality**

**LIFE OF MINE YEAR 4**

**Water Quantity<sup>A</sup>**

Pits**	Predicted (m <sup>3</sup> )	Measured (m <sup>3</sup> )	% Difference between predicted vs measured	Predicted Model Year
Portage	931 800	676 706	-27	3
Bay Goose	1 235 100	344 994	-72	3

<sup>A</sup>predicted volumes from Golder 2007 - Waste and Water Management Plan - Meadowbank Gold Project

\*\*There is no year 4 in the predicted model so take year 3 for Portage and Vault and year 3 for Goose.

**Third Portage Open Pit Sumps Water Quality**

**Footnotes:**

Only one water sample was taken in 2014 from Third Portage Pit Sump. There is not enough water quality samples taken to calculate the mean and lower 25th centile values. For this reason, no table was produced for Third Portage Pit.

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.

\* Used year 5 predictions for Vault and year 3 for Goose presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516. Ver 0

+ Some have no lower 25th percentile data as only 2 or 1 samples were monitored in 2014

\*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).

Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.

**2015 Comparison of predicted pit water quantity and quality to the measured water quantity and quality**  
**LIFE OF MINE YEAR 6**

**Water Quantity^**

Pits**	Predicted (m <sup>3</sup> )	Measured (m <sup>3</sup> )	% Difference between predicted vs measured	Predicted Model Year
Portage	715 200	136 627	-81	5
Bay Goose	1 086 400	383 800	-65	5
Vault Pit	46 100	111 336	142	5

^Predicted volumes from Golder 2007 - Waste and Water Management Plan - Meadowbank Gold Project, Table 12.1 and Figures 12.7

\*\*There is no year 6 in the predicted model so take year 5 for Portage and Vault. For Goose, pit reflooding started in 2015, use year 5 reflooding values minus evaporation for Goose.

**Footnotes:**

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.

\* Used year 7 predictions for Vault, year 3 for Goose and year 4 for Portage as presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516. Ver 0

+ Some have no lower 25th percentile data as only 1 or 2 samples were taken in 2016.

\*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).

Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.

**2017 Comparison of predicted pit water quantity and quality to the measured water quantity and quality**

**LIFE OF MINE YEAR 8**

**Water Quantity^**

Pits**	Predicted (m <sup>3</sup> )	Measured (m <sup>3</sup> )	% Difference between predicted vs measured	Predicted Model Year
Portage	715 200	341 192	-52	5
Bay Goose	635 200	464 019	-27	8
Vault Pit	53 900	249 513	363	8

^Predicted volumes from Golder 2007 - Waste and Water Management Plan - Meadowbank Gold Project, Table 12.1 and Figures 12.9

\*\*For year 8, in the predicted model, there is no value for the volume of water transferred from Portage Pit to the Reclaim Pond, so take year 5 values for Portage. For Goose, use year 8 reflooding values minus evaporation for Goose.

**Footnotes:**

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.

\* Used year 7 predictions for Vault, year 3 for Goose and year 4 for Portage as presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516. Ver 0

+ Some have no lower 25th percentile data as only 1 or 2 samples were taken in 2016.

\*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).

Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.

**2018 Comparison of predicted pit water quantity and quality to the measured water quantity and quality  
LIFE OF MINE YEAR 9**

**Water Quantity^**

Pits**	Predicted (m <sup>3</sup> )	Measured (m <sup>3</sup> )	% Difference between predicted vs measured	Predicted Model Year
Portage	715 200	117 803	-84	5
Bay Goose	635 200	327 114	-49	8
Vault Pit	53 900	88 469	64	8

^Predicted volumes from Golder 2007 - Waste and Water Management Plan - Meadowbank Gold Project, Table 12.1 and Figures 12.4 and 12-6

\*\*For year 9, in the predicted model, there is no value for the volume of water transferred from Portage Pit to the Reclaim Pond, so take year 5 values for Portage. For Goose, use year 8 reflooding values minus evaporation for Goose. For Vault, use Year 8.

**Vault Pit Sumps Water Quality**

**Footnotes:**

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.

\* Used year 7 predictions for Vault, year 3 for Goose and year 4 for Portage which represent pits in operation as presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516. Ver 0

+ Some have no lower 25th percentile data as only 1 or 2 samples were taken in 2018.

\*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).

Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.

**2019 Comparison of predicted pit water quantity and quality to the measured water quantity and quality**

**LIFE OF MINE YEAR 10**

**Water Quantity^ (SURFACE RUNOFF & INFILTRATION)**

Pits**	Predicted (m³)	Measured (m³)	% Difference between predicted vs measured	Predicted Model Year
Portage	167 478	289 269	73	2019
Bay Goose	343 567	327 114	-5	2019
Vault Pit*	350 800	951 768	171	^ and **

\*Predicted volumes from August 2007 - Waste and Water Management Plan - Meadowbank Gold Project, Table 12.2, Year 7 and include runoff to Vault Pit and other drainage area. In Year 10, the pits in Vault area are naturally re-flooding.  
 \*\*For year 10, for Vault, use the runoff estimated in Figure 12-8. For Portage and Bay Goose, values include surface runoff and infiltration into the pit based on the water balance considered in the ICRP update 2019.

**Footnotes:**

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.

\* Used year 8 predictions for Vault for 1st year of pit flooding, year 3 for Goose and year 4 for Portage which represent pits in operation as presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516, Ver 0

\*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).

\*\*\* Annual average water quality and 25% centile values shown in this table are based on the water quality forecast considered in the Meadowbank Interim Closure and Reclamation Plan - Update 2019, Doc. No. 662987-5000-4EER-0001, rev. 00.

+ Some have no lower 25th percentile data as only 1 or 2 samples were taken in 2019.

Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.

**2020 Comparison of predicted pit water quantity and quality to the measured water quantity and quality**

**LIFE OF MINE YEAR 11**

**Water Quantity (SURFACE RUNOFF & INFILTRATION)**

Pit	Predicted (m³)	Measured (m³)	% Difference between predicted vs measured	Predicted Model Year
Portage**	167 616	302 500	80	2020
Bay Goose**	344 535	389 350	13	2020
Vault Pit^	350 800	933 990	166	^

\*\*predicted volumes from August 2007 - Waste and Water Management Plan - Meadowbank Gold Project, Table 12.2, Year 7 and include runoff to Vault Pit and other drainage area. In Year 11, the pits in Vault area are naturally reflooding. For year 11, for Vault, use the runoff estimated in Table 12.2  
 ^For Portage and Bay Goose, values include surface runoff and infiltration into the pit based on the water balance considered in the ICRP update 2019.

**Footnotes:**

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.  
 \* Used year 9 predictions for Vault for 2nd year of pit flooding, year 3 for Goose and year 4 for Portage which represent pits in operation as presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516. Ver 0  
 \*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).  
 \*\*\* Annual average water quality and 25% centile values shown in this table are based on the water quality forecast considered in the Meadowbank Interim Closure and Reclamation Plan - Update 2019, Doc. No. 662987-5000-4EER-0001, rev. 00.  
 + Some have no lower 25th percentile data as only 1 or 2 samples were taken in 2019.  
 Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.

**2021 Comparison of predicted pit water quantity and quality to the measured water quantity and quality**

**LIFE OF MINE YEAR 12**

**Water Quantity (SURFACE RUNOFF & INFILTRATION)**

Pit	Predicted (m³)	Measured (m³)	% Difference between predicted vs measured	Predicted Model Year
Portage**	167 478	413 104	147	2021
Bay Goose**	343 657	201 289	-41	2021
Vault Pit^	350 800	933 990	166	^

\*Predicted volumes from August 2007 - Waste and Water Management Plan - Meadowbank Gold Project, Table 12.2, Year 7 and include runoff to Vault Pit and other drainage area. In Year 12, the pits in Vault area are naturally reflooding. For year 12, for Vault, use the runoff estimated in Table 12.2  
 \*\*For Portage and Bay Goose, values include surface runoff and infiltration into the pit based on the water balance considered in the ICRP update 2019.

**Footnotes:**

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.

\* Used year 10 predictions for Vault which represent 3rd year of pit flooding, year 3 for Goose and year 4 for Portage which represent active pit operations as presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516. Ver 0

\*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).

\*\*\* Annual average water quality and 25th centile values shown in this table are based on the water quality forecast considered in the Meadowbank Interim Closure and Reclamation Plan - Update 2019, Doc. No. 662987-5000-4EER-0001, rev. 00.

+ Some have no lower 25th percentile data as only 1 or 2 samples were taken in 2019.

Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.

**2022 Comparison of predicted pit water quantity and quality to the measured water quantity and quality**

**LIFE OF MINE YEAR 13**

**Water Quantity (SURFACE RUNOFF & INFILTRATION)**

Pit	Predicted (m³)	Measured (m³)	% Difference between predicted vs measured	Predicted Model Year
Portage**	167 478	228 210	36	2022
Bay Goose**	343 657	260 000	-24	2022
Vault Pit^	350 800	933 990	166	^

\*predicted volumes from August 2007 - Waste and Water Management Plan - Meadowbank Gold Project, Table 12.2, Year 7 and include runoff to Vault Pit and other drainage area. In Year 13, the pits in Vault area are naturally reflooding. For year 13, for Vault, use the runoff estimated in Table 12.2  
 \*\*For Portage and Bay Goose, values include surface runoff and infiltration into the pit based on the water balance considered in the ICRP update 2019.

**Footnotes:**

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.

\* Used year 11 predictions for Vault which represent 3rd year of pit flooding, year 3 for Goose and year 4 for Portage which represent active pit operations as presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516. Ver 0

\*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).

\*\*\* Annual average water quality and 25th centile values shown in this table are based on the water quality forecast considered in the Meadowbank Interim Closure and Reclamation Plan - Update 2019, Doc. No. 662987-5000-4EER-0001, rev. 00.

+ Some have no lower 25th percentile data as only 1 or 2 samples were taken in 2019.

Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.

**2023 Comparison of predicted pit water quantity and quality to the measured water quantity and quality**

**LIFE OF MINE YEAR 14**

**Water Quantity (SURFACE RUNOFF & INFILTRATION)**

Pit	Predicted (m³)	Measured (m³)	% Difference between predicted vs measured	Predicted Model Year
Portage**	167 478	228 210	36	2023
Bay Goose**	343 657	389 350	13	2023
Vault Pit^	350 800	933 990	166	^

\*predicted volumes from August 2007 - Waste and Water Management Plan - Meadowbank Gold Project, Table 12.2, Year 7 and include runoff to Vault Pit and other drainage area. In Year 13, the pits in Vault area are naturally reflooding. For year 13, for Vault, use the runoff estimated in Table 12.2  
 \*\*For Portage and Bay Goose, values include surface runoff and infiltration into the pit based on the water balance considered in the ICRP update 2019.

**Footnotes:**

Highlighted values represent exceedences of greater than 20% relative percent difference between predicted vs measured values.

\* Used year 11 predictions for Vault which represent 3rd year of pit flooding, year 3 for Goose and year 4 for Portage which represent active pit operations as presented in Golder, 2007 - Water Quality Predictions Meadowbank Gold Project Doc No 516, Ver 0

\*\* Discharge criteria and guidelines based on total metal concentrations. Sulphate guideline based on threshold value from BC Environment guideline for the protection of aquatic life for very soft water (0-30 mg/L) (April 2013).

\*\*\* Annual average water quality and 25% centile values shown in this table are based on the water quality forecast considered in the Meadowbank Interim Closure and Reclamation Plan - Update 2019, Doc. No. 662987-5000-4EER-0001, rev. 00.

+ Some have no lower 25th percentile data as only 1 or 2 samples were taken in 2019.

Highlighted values in yellow indicate a mean measured value greater than the discharge criteria or guidelines.
